PROTOTYPE SCREEN GUIDE

FUT Underwriting Engine

A screenshot of every screen in the prototype, with a plain description of what is happening on it.

Commercial insurance submission-to-quote lifecycle · browser-only prototype
Captured 29 October 2026 from the working copy of the app (headless Microsoft Edge, 1440 px wide)

Read this first. The app ships with no demonstration data, so it starts empty. To make these screenshots, five sample trucking cases and a small set of sample users were loaded from the project's test fixtures, and the sample case **Apex Freight LLC (SUB-48213-TX)** was walked through Steps 5 to 14, and an email case (Delta Haulers LLC) through Steps 1 to 4, from Submission Ingest to Policy Issuance. Names, numbers and values on the screens are sample data. The yellow "Demo data in use" banner at the top of every screen is the prototype's own warning.

What the prototype does

The prototype follows one commercial insurance submission from the moment it arrives from a broker or a customer portal, through clearance, underwriting review, the conditions the quote is subject to, pricing and quote issue, to a bound and issued policy. Commercial trucking (commercial auto) is the fully built line; property, professional liability and general liability lines can be chosen from the Product list in the header.

It runs entirely in the browser with no server behind it. Several outside systems are simulated: the e-signature, the policy administration system (PAS) that returns a policy number at bind, e-mail, the rating engine (its output is imported from a JSON file), registry look-ups (FMCSA, NHTSA, DMV are not connected), producer licensing (a fictional test registry, not NIPR) and the sanctions list (a fictional test list, not the OFAC list).

The workflow: 6 stages, 14 steps

Stage	Steps	What happens
1. Submission Intake & Clearance	1 Ingest 2 Triage & Clearance	What arrived is kept exactly as received. It is triaged (what kind of message, who is named, which documents are there, duplicates) and the legal checks run: producer licence and appointment, sanctions, market clearance.
2. Extraction & Data Enrichment	3 Extract 4 Confirm 5 Enrich & Check	Each file is read; a person checks and applies what was read and completes the file; registry results, the loss run analysis and the statement of values are produced.
3. Underwriting Review & Rules	6 Score & Appetite 7 Surplus Lines 8 Decision Brief 9 Authority 10 Subjectivities	The risk is scored against the appetite rules; the placement (admitted or surplus lines) and its tax basis are set; one page gives the evidence and a suggested reply to the broker; a risk beyond the underwriter's authority is referred by name; the conditions the quote is subject to are listed.
4. Rating & Pricing	11 Rating	The rating output is imported and discretionary pricing is applied.
5. Quoting & Binding	12 Quote 13 Bind	Quote conditions and notices are set and the quote is signed and issued; the customer accepts and the policy is bound and synced to the PAS.
6. Policy Issuance & Terms	14 Policy Issuance	The issued policy is shown.

Several steps share one page and each shows only its own cards: Steps 1, 3 and 4 share the ingestion page, and Steps 7, 10, 11, 12 and 13 share the quote page.

Who uses it

Person (role)	What the role does
Priya Nair, Head of Underwriting	Creates and imports submissions, assigns work, owns guidelines, authority and access. Makes no case-level decisions.
Emily Watson, Underwriting Assistant	Triage, document ingestion and initial data checks.
Sarah Jenkins, Underwriter I ($2M)	Standard commercial accounts under $2.0M exposure.
David Chen, Senior Underwriter ($10M)	Complex fleet and multi-location property risks up to $10.0M.

Marcus Vance, Chief Underwriting Officer ($25M)	Executive referrals, treaty exceptions and sign-off.
Robert Okafor, Compliance Officer	Reads everything, changes nothing. Sees the Audit Log.

What stops a case

Gates are checked as the case moves and again at bind: missing required information, producer licence and appointment, sanctions screening, surplus lines requirements (tax basis, diligent search, placing broker, disclosure), the underwriter's authority, open subjectivities, TRIA offer, adverse-action notices, and quote validity. A case can also leave the pipeline early as declined, withdrawn by the broker, or quote not taken.

3. The case workflow: 6 stages, 14 steps

- Step 1: Ingest (the email as received)
- End-to-End Case Summary & Audit Preview
- Step 2: Triage & Clearance
- Step 3: Extract
- Step 4: Confirm (before applying)
- Step 4: Confirm (after applying, with the completeness check)
- Step 5: Enrich & Check (registry, loss run analysis, statement of values)
- Step 6: Score & Appetite Match (workbench)
- Step 7: Surplus Lines (as first opened)
- Step 7: Surplus Lines (recorded)
- Step 8: Decision Brief & Broker Response
- Step 9: Authority & Referral Desk
- Step 10: Subjectivities
- Step 11: Rating (no rating file yet)
- Step 11: Rating (rating imported)
- Step 12: Quote (and quote conditions)
- E-signature before the quote is issued
- Step 12: quote issued, awaiting the customer
- Step 13: Bind (awaiting the customer)
- Step 13: Bind (customer accepted, ready to bind)
- Step 13: Bind (policy bound)
- Step 14: Policy Issuance & Terms

4. Referrals between underwriters

- Referral: who the risk goes to
- Referral: sent, "Awaiting David Chen"
- Referral: "Referred to you" on the receiver's board
- Referral: the receiver decides
- Referral: the Head of Underwriting's list

5. Exits: Decline Center

- Integrating API: Raw JSON

9. Compliance and management pages

- Audit Log
- Audit Log after a bound case
- Archive & Retention
- Team Activity
- User Master
- Add New User
- Review Routing Rules

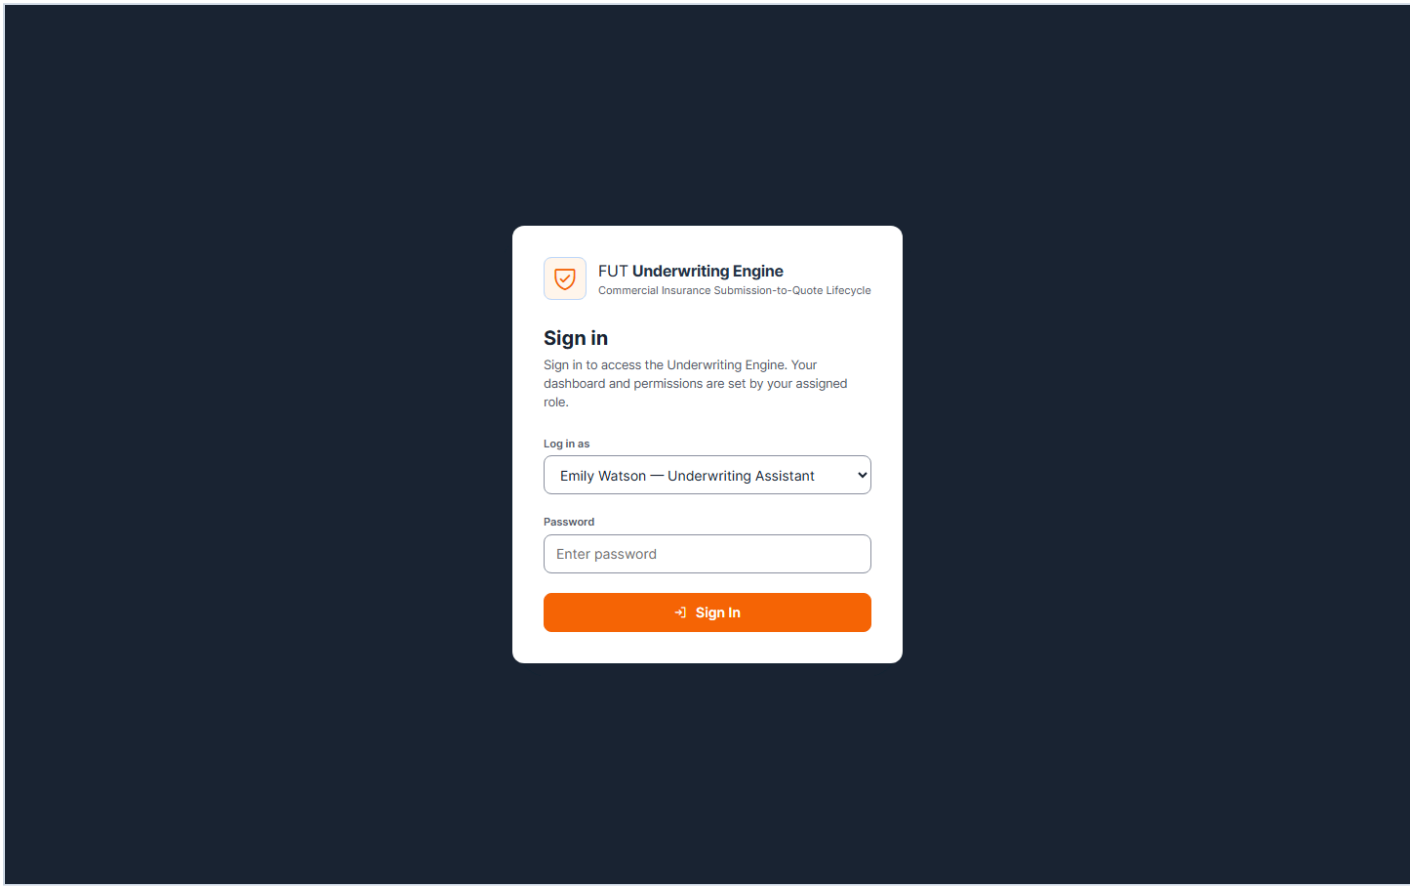

63 screens. Long screens are shown in consecutive parts.

1. SIGN IN

Sign in

> The first screen. Nothing else in the app can be reached until someone signs in. The user picks who they are from the team list and types any password (the prototype has no real credential check; the password only has to be non-empty). The role chosen here decides the dashboard, the side menu and what each button is allowed to do.

- Roles on the list: Underwriting Assistant, Underwriter I, Senior Underwriter, Chief Underwriting Officer, Head of Underwriting, Compliance Officer.
- "Switch user" in the sidebar footer brings the user back to this screen.

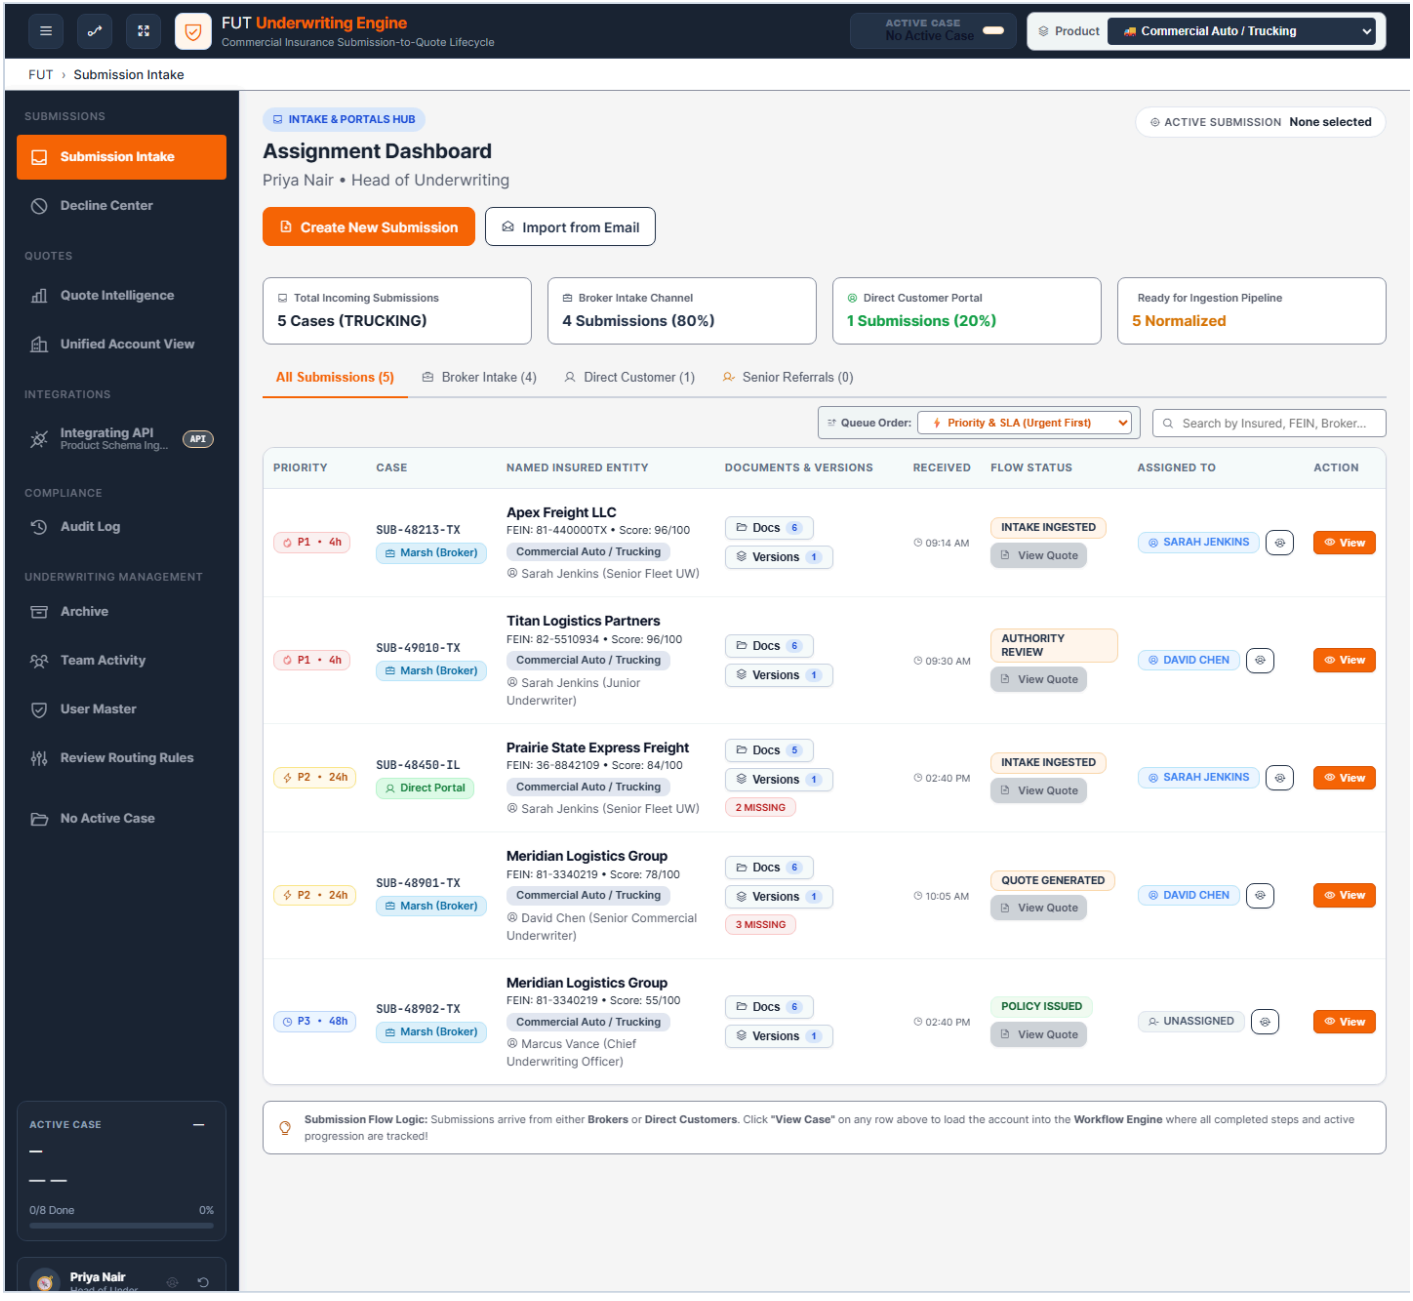

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Submission Intake: Assignment Dashboard (Head of Underwriting)

> Submission Intake: the home screen, shown here for the Head of Underwriting (Priya Nair). It is the queue of every submission that has arrived, by broker email or the direct customer portal. The four tiles count cases by channel. Each row shows priority and SLA clock (P1 = 4 hours), case number, insured, how many documents and versions it has, when it arrived, its flow status, who it is assigned to, and a View button that opens the case in the workflow.

- Only the Head of Underwriting sees "Create New Submission" and "Import from Email"; everyone else's dashboard hides them.
- Tabs filter the queue: All, Broker Intake, Direct Customer, Senior Referrals. The queue can be sorted by priority and SLA, and searched by insured, FEIN or broker.
- When a referral is waiting for a decision, a "Referrals" table appears above the tiles (see section 4).

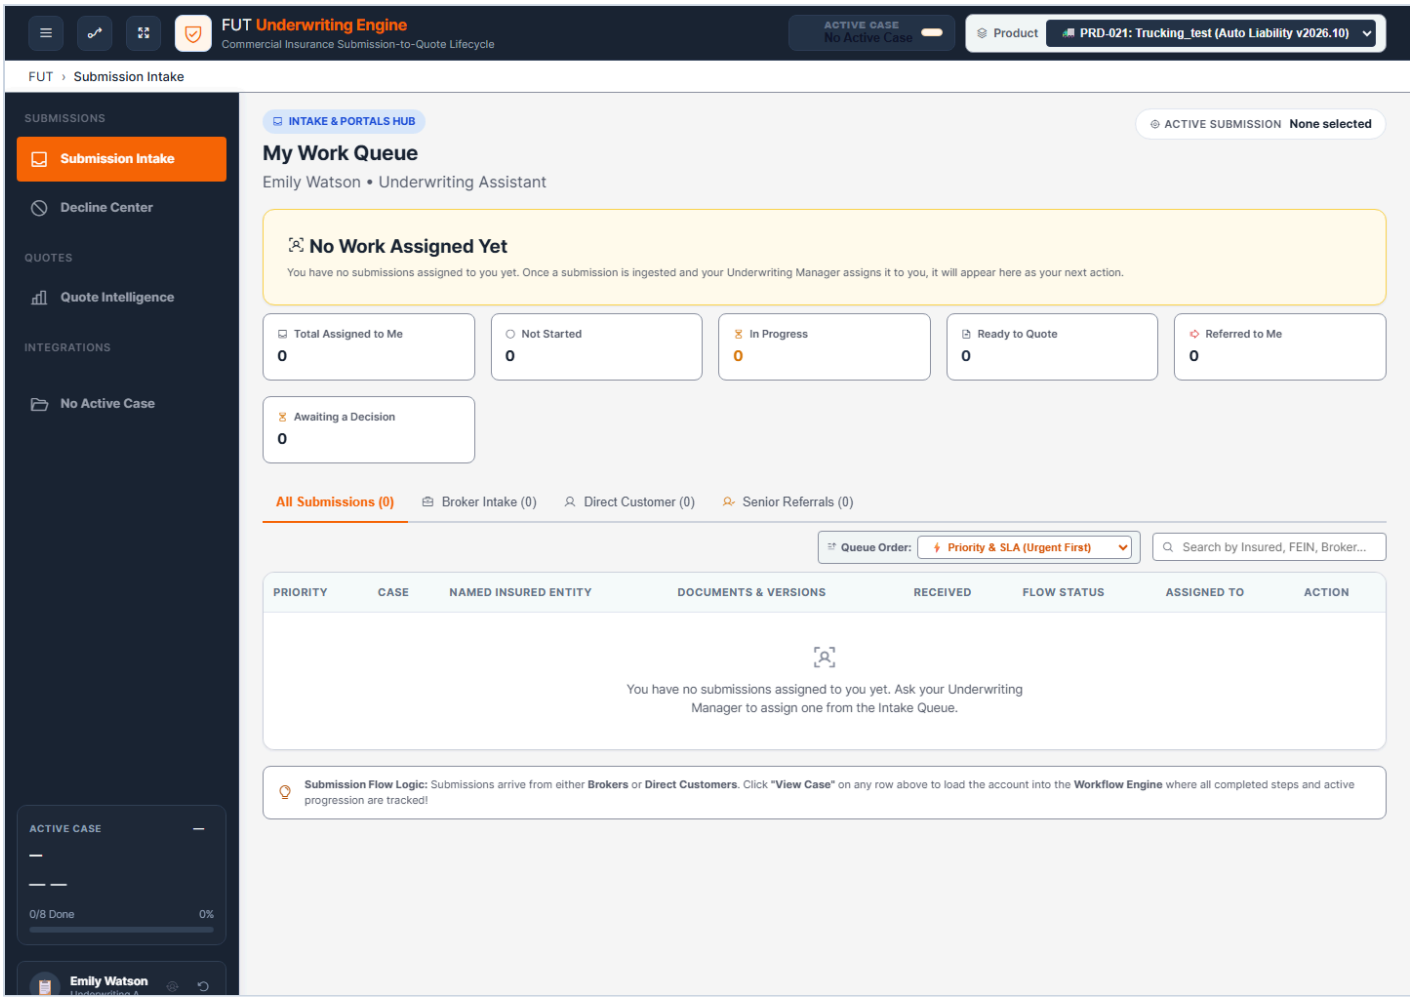

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Dashboard: Underwriting Assistant

> The same home screen for an Underwriting Assistant (Emily Watson). It becomes "My Work Queue": only cases assigned to this person appear. Nothing is assigned yet, so it says "No Work Assigned Yet" and the counters (assigned, not started, in progress, ready to quote) are zero.

- The side menu is shorter: Integrating API, Unified Account View and the management pages are not available to this role.

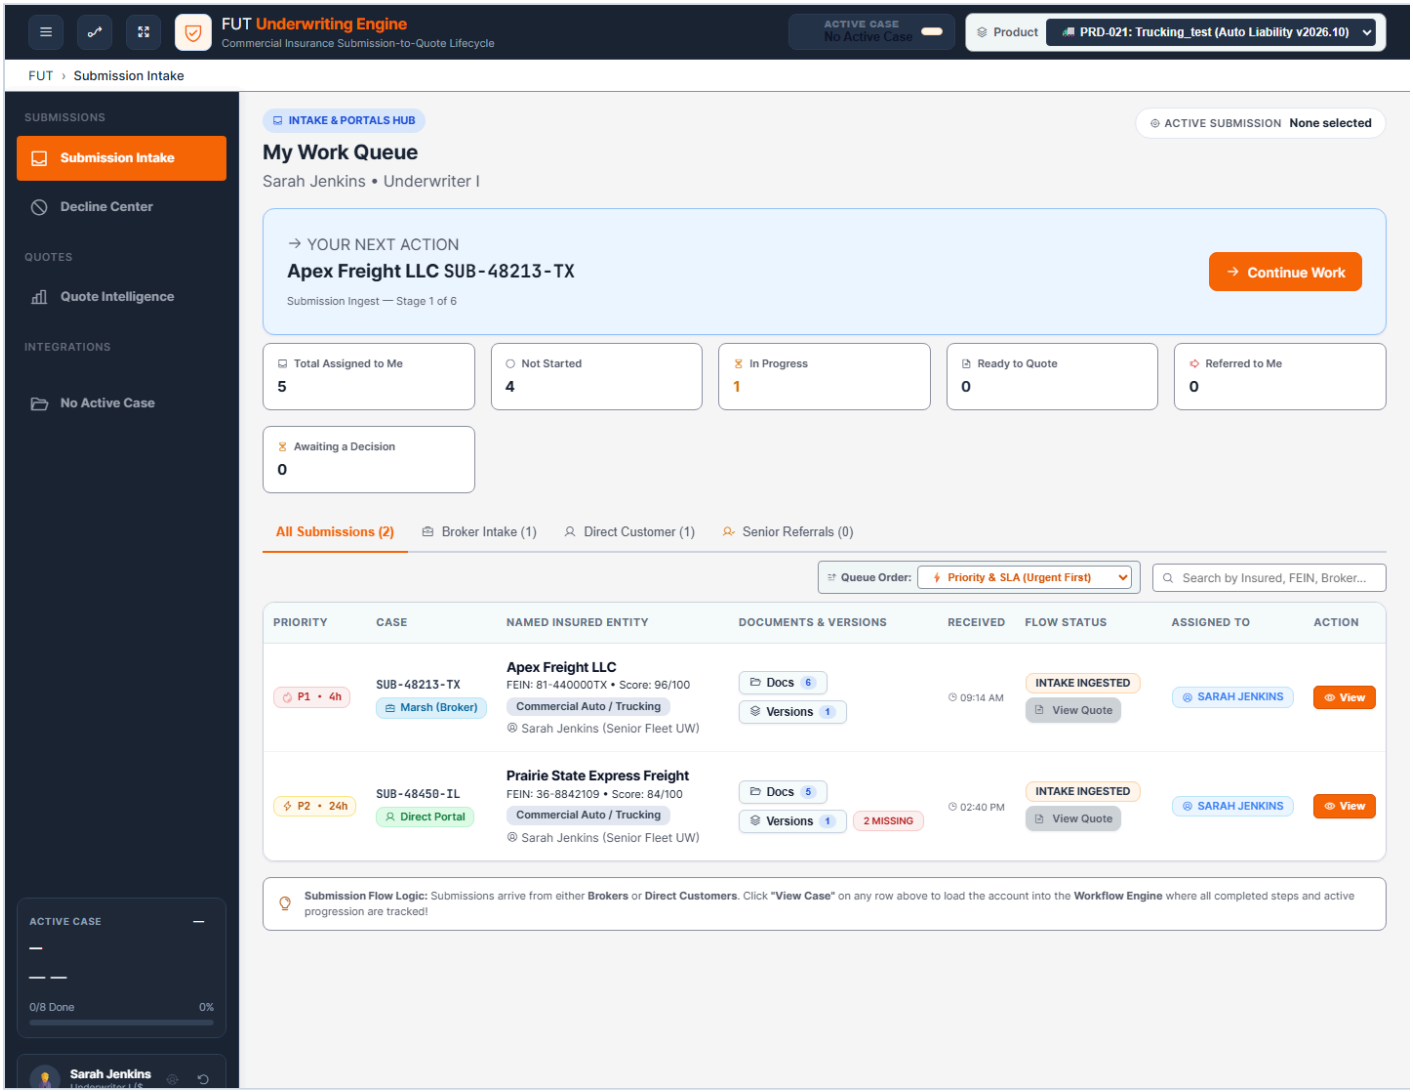

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Dashboard: Underwriter I

> My Work Queue for an Underwriter I (Sarah Jenkins). A "Your next action" card at the top points to the case that needs attention next (here Apex Freight LLC at Submission Ingest, stage 1 of 6) with a Continue Work button. Below it are counters (assigned, not started, in progress, ready to quote, referred to me, awaiting a decision) and a table of only this person's cases.

- Each person works within an authority limit (Underwriter I: $2M exposure). Larger risks are referred to the person whose authority covers them, at the Authority & Referral Desk (Step 11).
- "Awaiting a Decision" counts the cases this person has referred and nobody has decided yet.

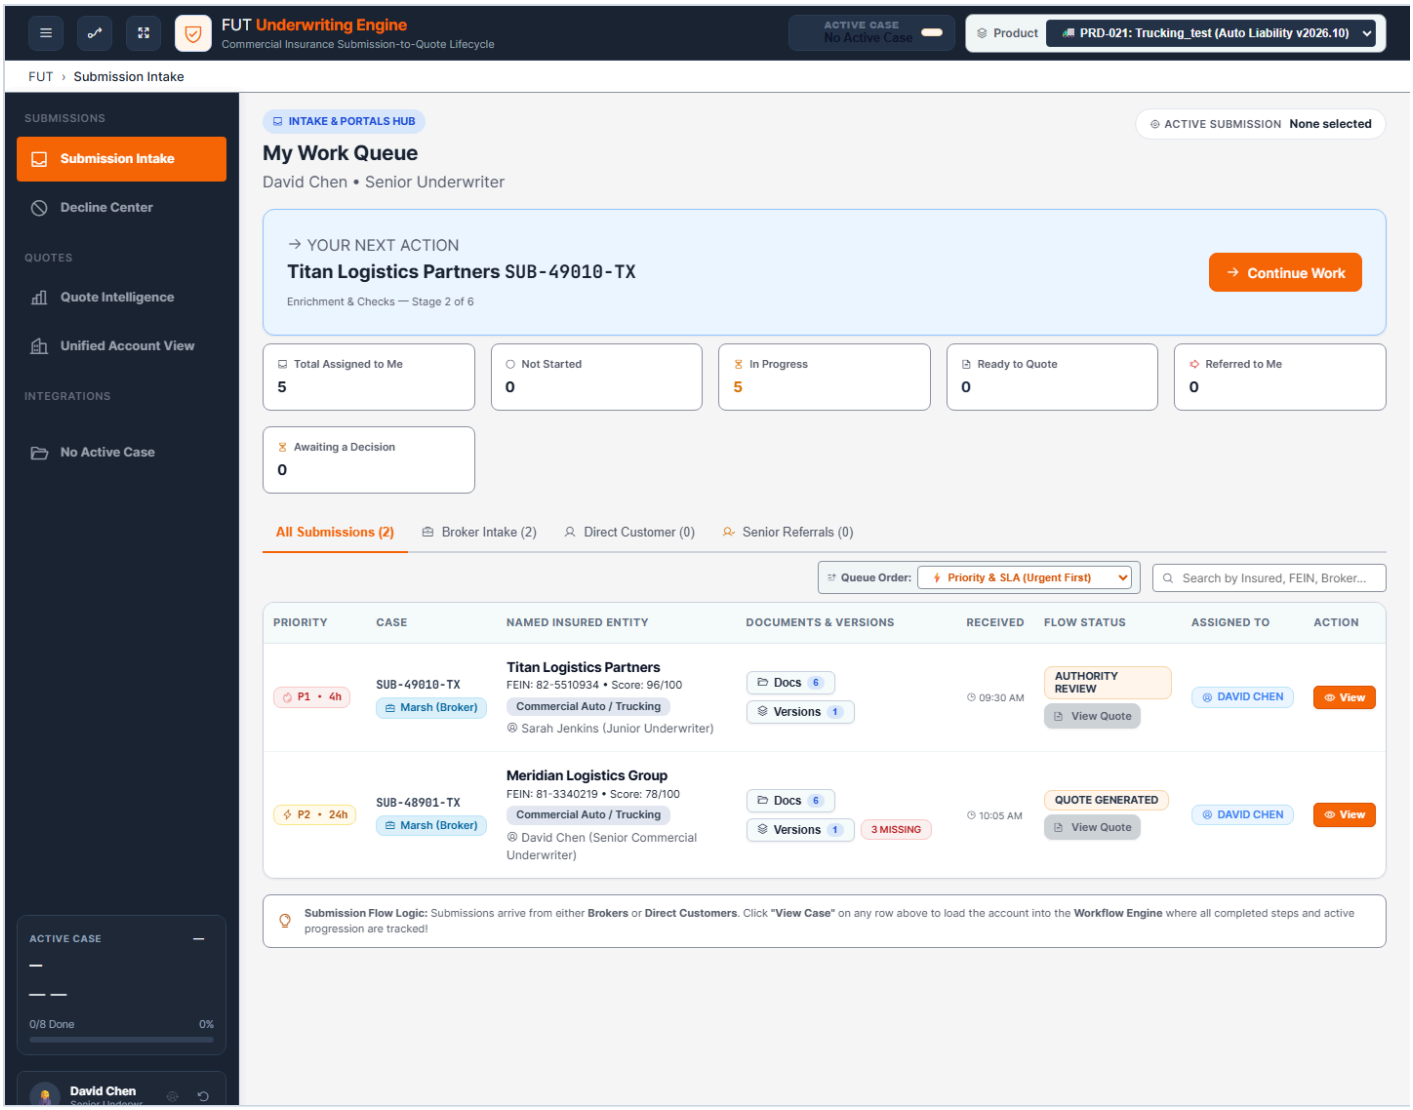

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Dashboard: Senior Underwriter

> My Work Queue for a Senior Underwriter (David Chen). The next-action card shows the case that needs this person next. The table lists only the cases assigned to David Chen, plus any case referred to him.

- Senior Underwriter authority in the prototype is $10M.
- A case referred to this person shows a "Referred to you" card at the top and a "Review & Decide" button (see section 4).

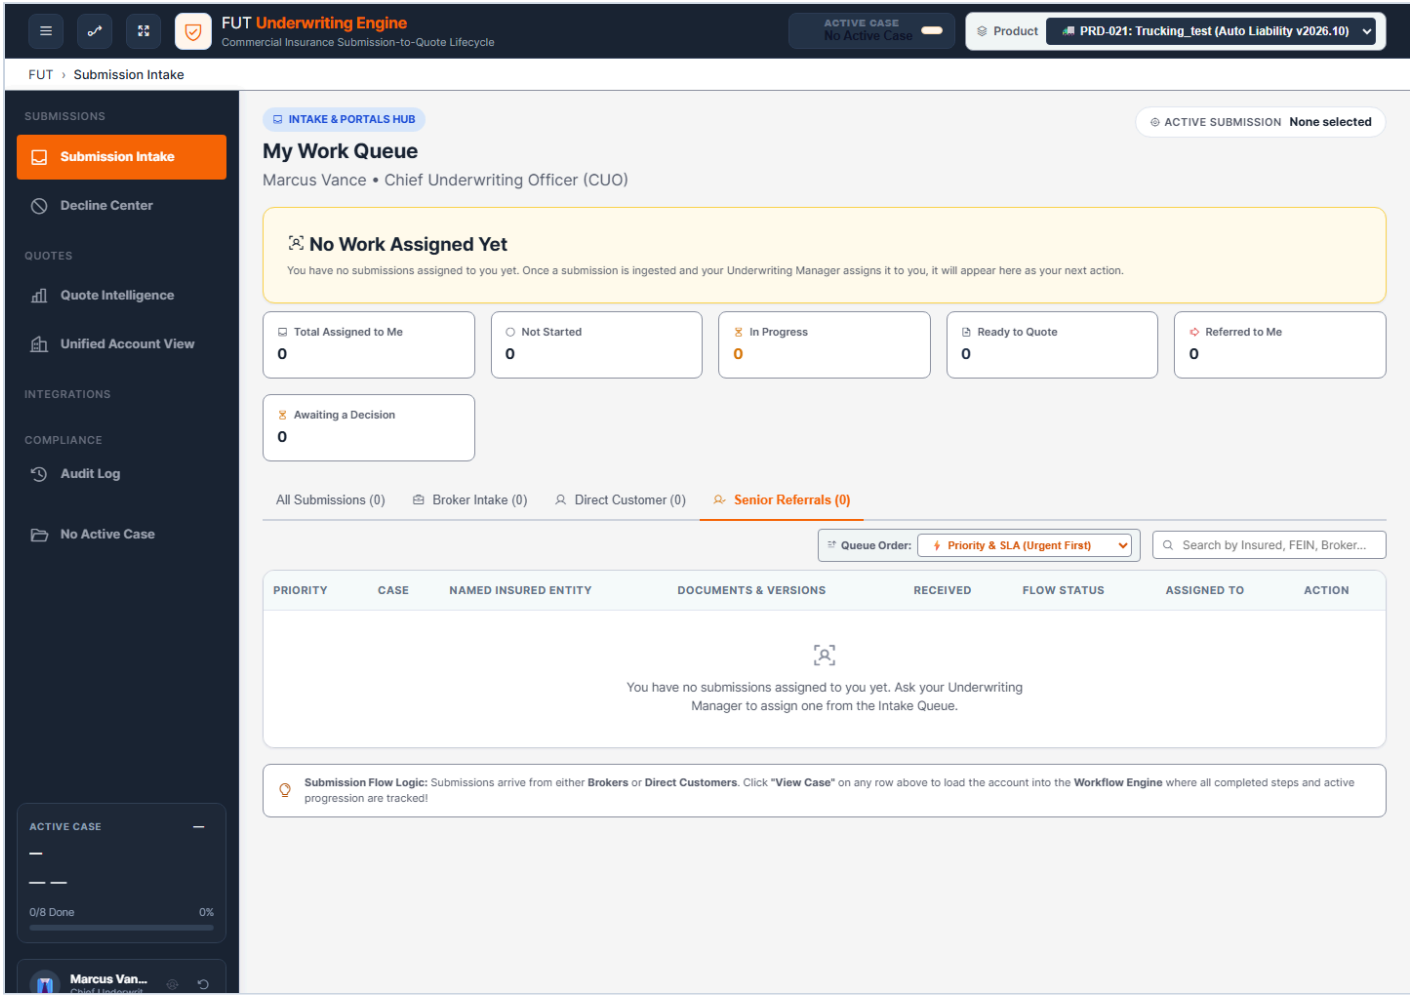

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Dashboard: Chief Underwriting Officer (referrals)

> The Chief Underwriting Officer's (Marcus Vance) queue. It opens on the "Senior Referrals" tab. A referral goes to the first level whose authority covers the risk, so the CUO only receives cases that need CUO authority; at the moment there are none.

- CUO authority in the prototype is $25M; this role handles executive referrals and treaty exceptions.

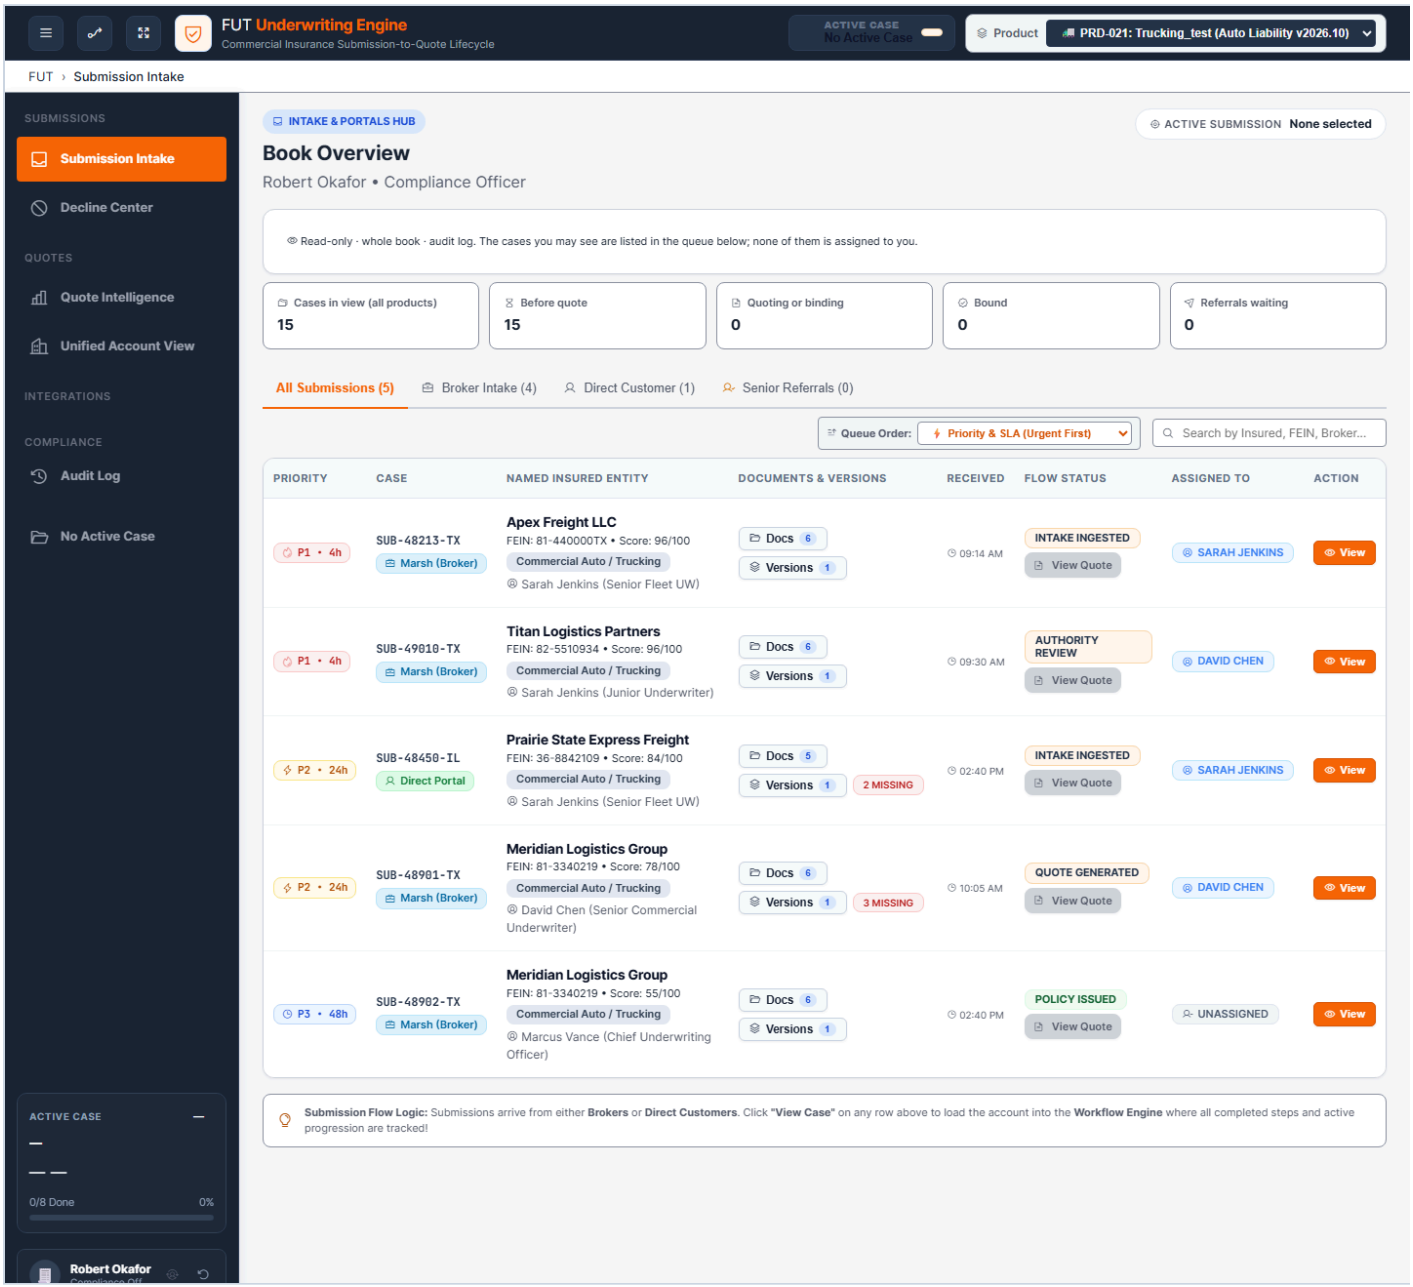

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Dashboard: Compliance Officer

> The Compliance Officer's (Robert Okafor) Book Overview. This role reads everything and changes nothing, so nothing is "assigned" to it: the page says so, and shows five counters instead (cases in view across all products, before quote, quoting or binding, bound, referrals waiting). The queue below lists the cases the officer may see, and the side menu adds an "Audit Log" entry that other underwriting roles do not see.

- The heading names the signed-in person (Robert Okafor, Compliance Officer).

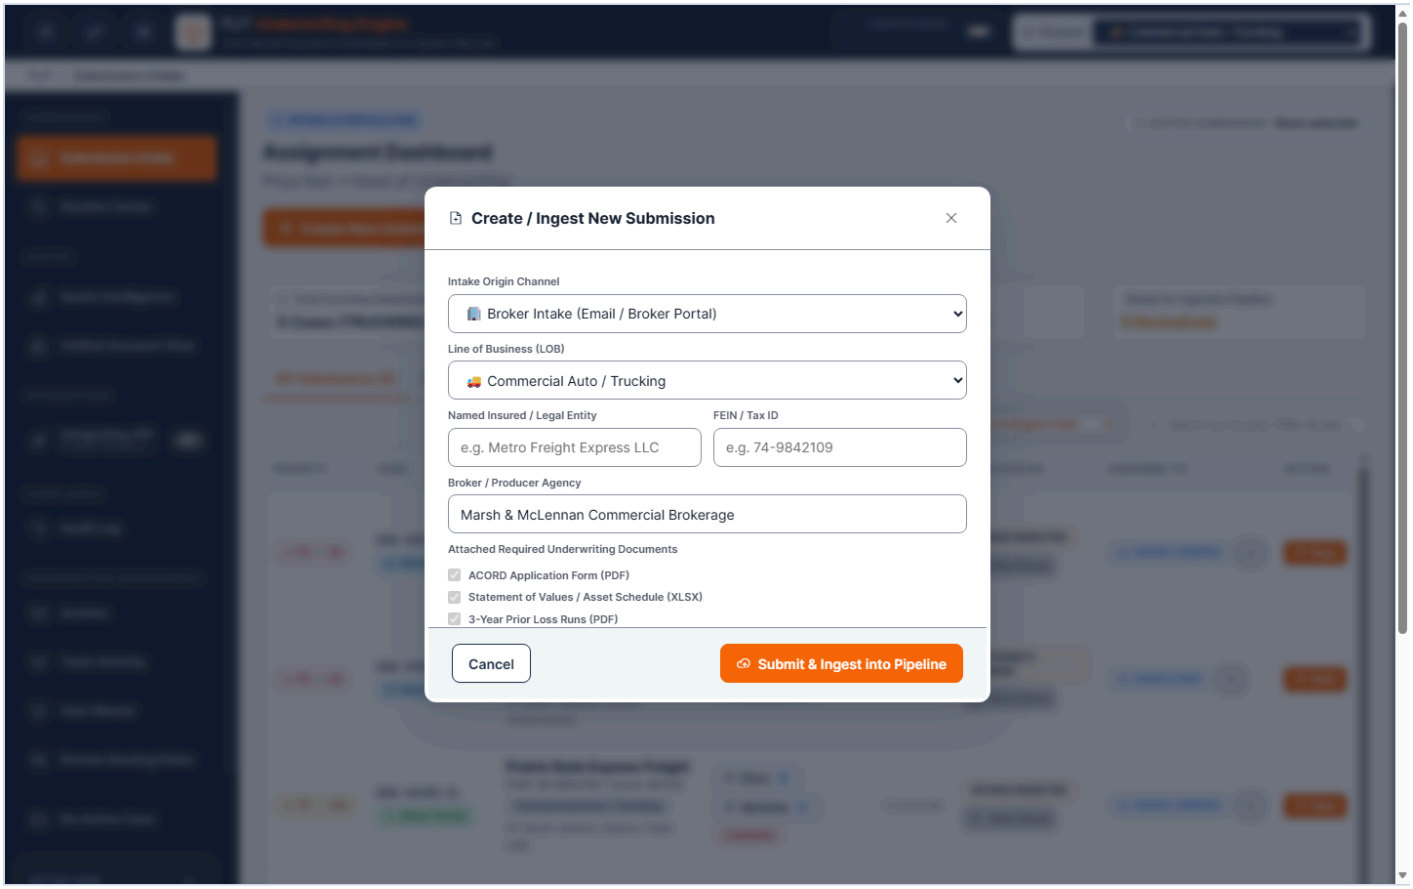

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Create / Ingest New Submission

> "Create / Ingest New Submission": the form the Head of Underwriting uses to start a case by hand. It asks for the intake channel (broker or direct), line of business, named insured, FEIN, and the broker agency, and lists the documents that should be attached (ACORD application, statement of values or asset schedule, three-year loss runs).

- The form refuses an empty insured name, a malformed FEIN, or a broker case with no broker named.
- A new case starts blank apart from what is typed here; nothing is invented. Missing information is then listed by the completeness check in Step 1.

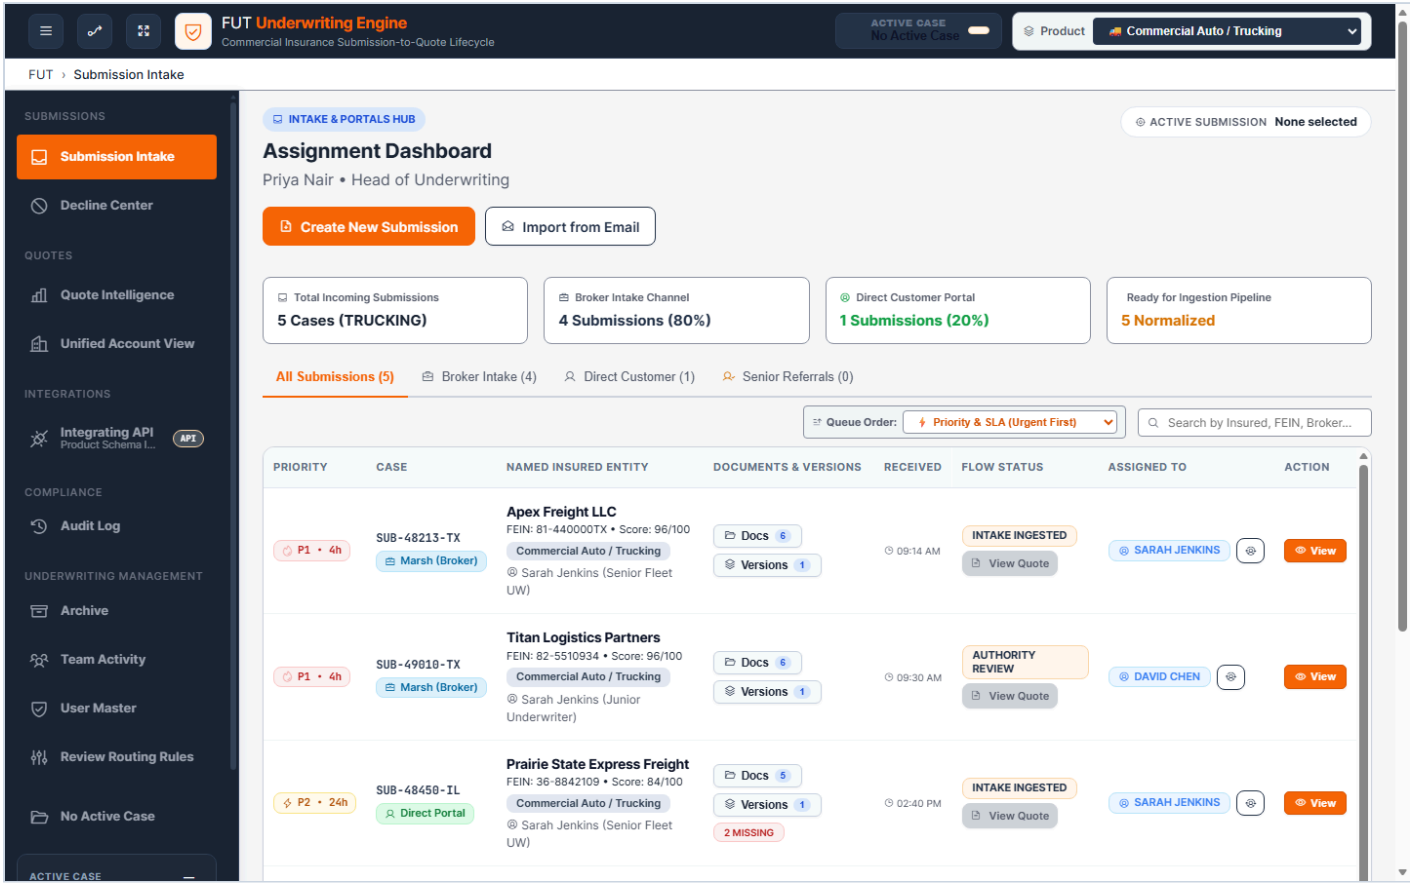

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Import from Email

> "Copy Raw Email into a New Submission": the other way in. The Head of Underwriting pastes the text of a broker email and attaches whatever came with it (PDF, Word, Excel, CSV, images, up to 15 MB each). The prototype reads the email and the attachments and builds the case from them.

- The line of business is picked here only for routing; it is not guessed from the email text.

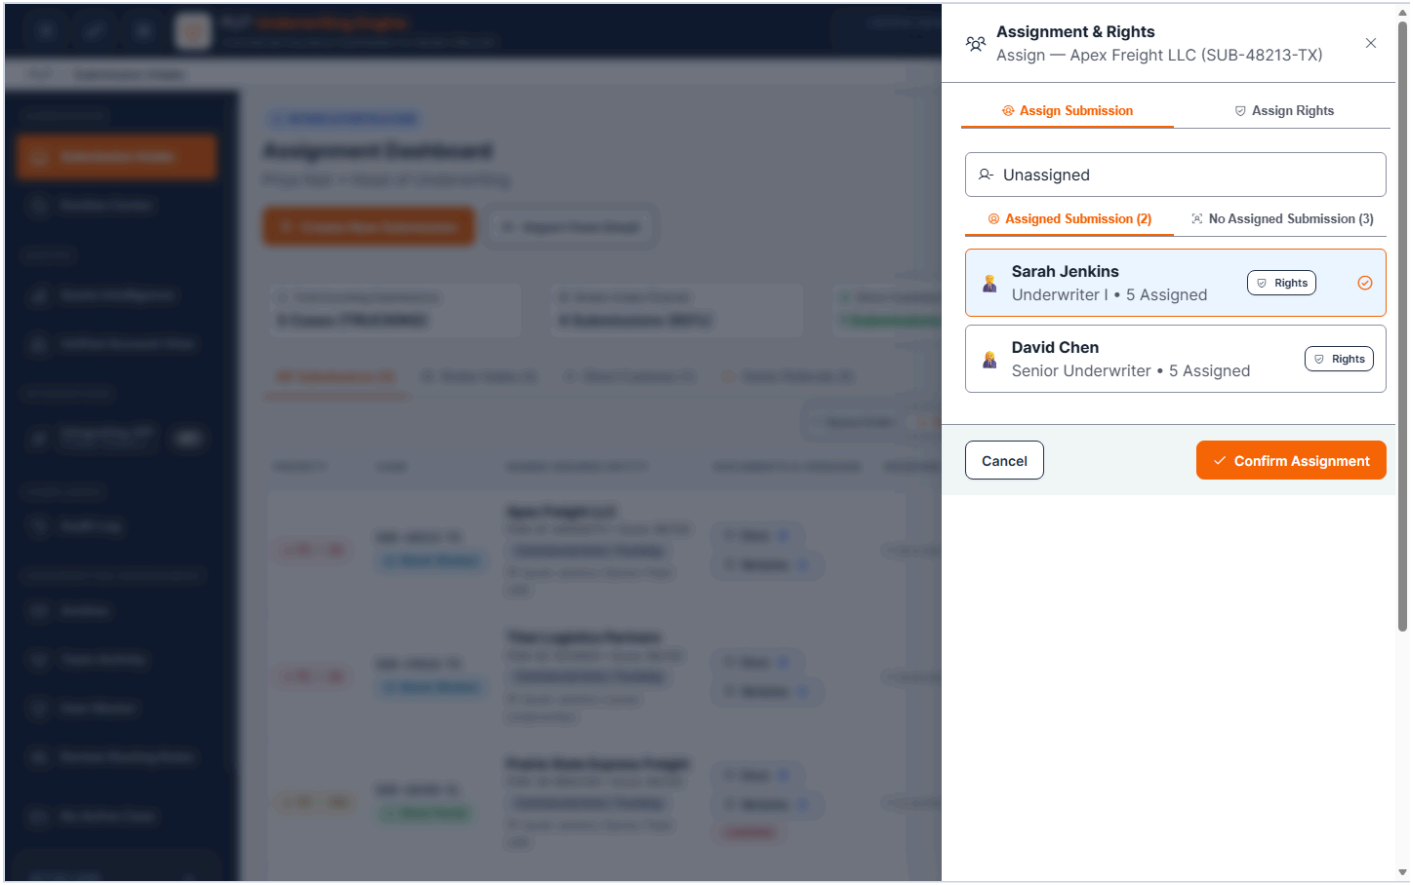

2. SUBMISSION INTAKE AND ROLE DASHBOARDS

Assignment & Rights panel

> "Assignment & Rights" side panel, opened from the assign button on a queue row. The Head of Underwriting chooses which underwriter the case goes to (here Apex Freight LLC, with Sarah Jenkins and David Chen as the choices and their current workload shown). A second tab, Assign Rights, is for reviewing a person's rights.

- Assigning is what makes a case appear on someone's My Work Queue.

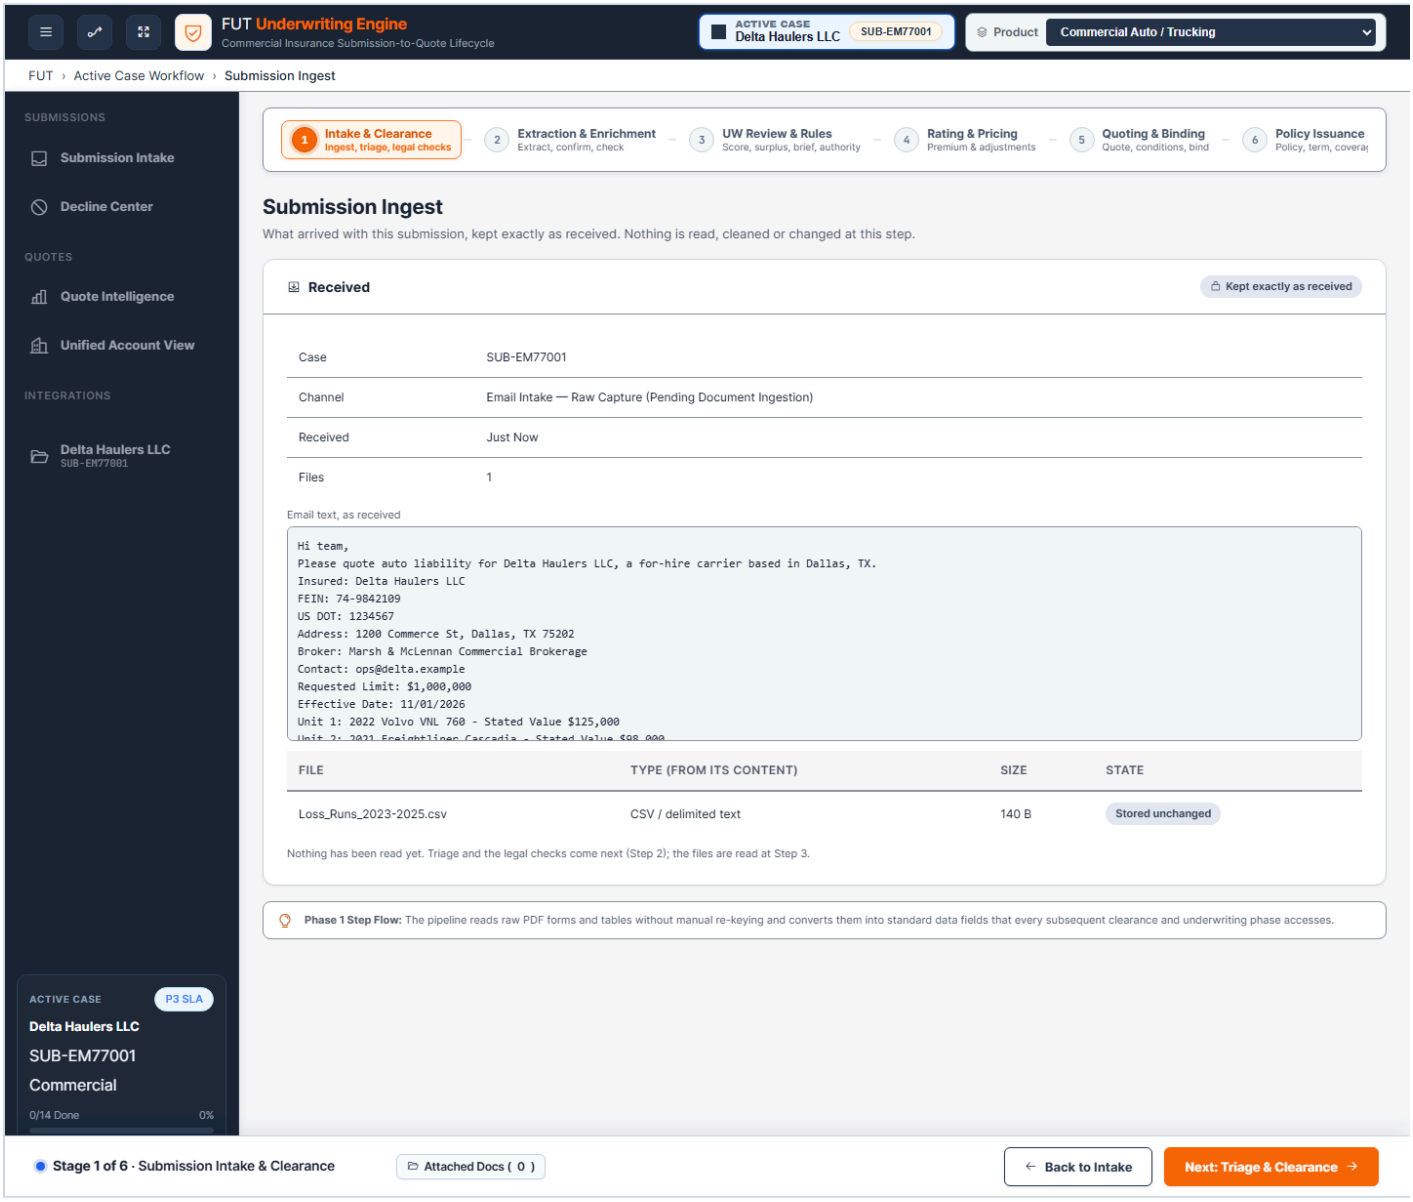

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 1: Ingest (the email as received)

> Step 1 of 14 (Stage 1 of 6): Submission Ingest. The case here arrived by email, so this step shows what arrived, exactly as received: the case id, the channel (Email Intake, raw capture), when it arrived, the number of files, the email text, and each attached file with the type found from its content and the note "Stored unchanged". The six-stage stepper sits at the top; the breadcrumb names the step.

- Nothing is read, cleaned or changed here. The page ends by saying so: triage and the legal checks come next (Step 2) and the files are read at Step 3.
- A case entered directly (Create New Submission) has no email or file to keep; this step then says it was entered as structured fields.

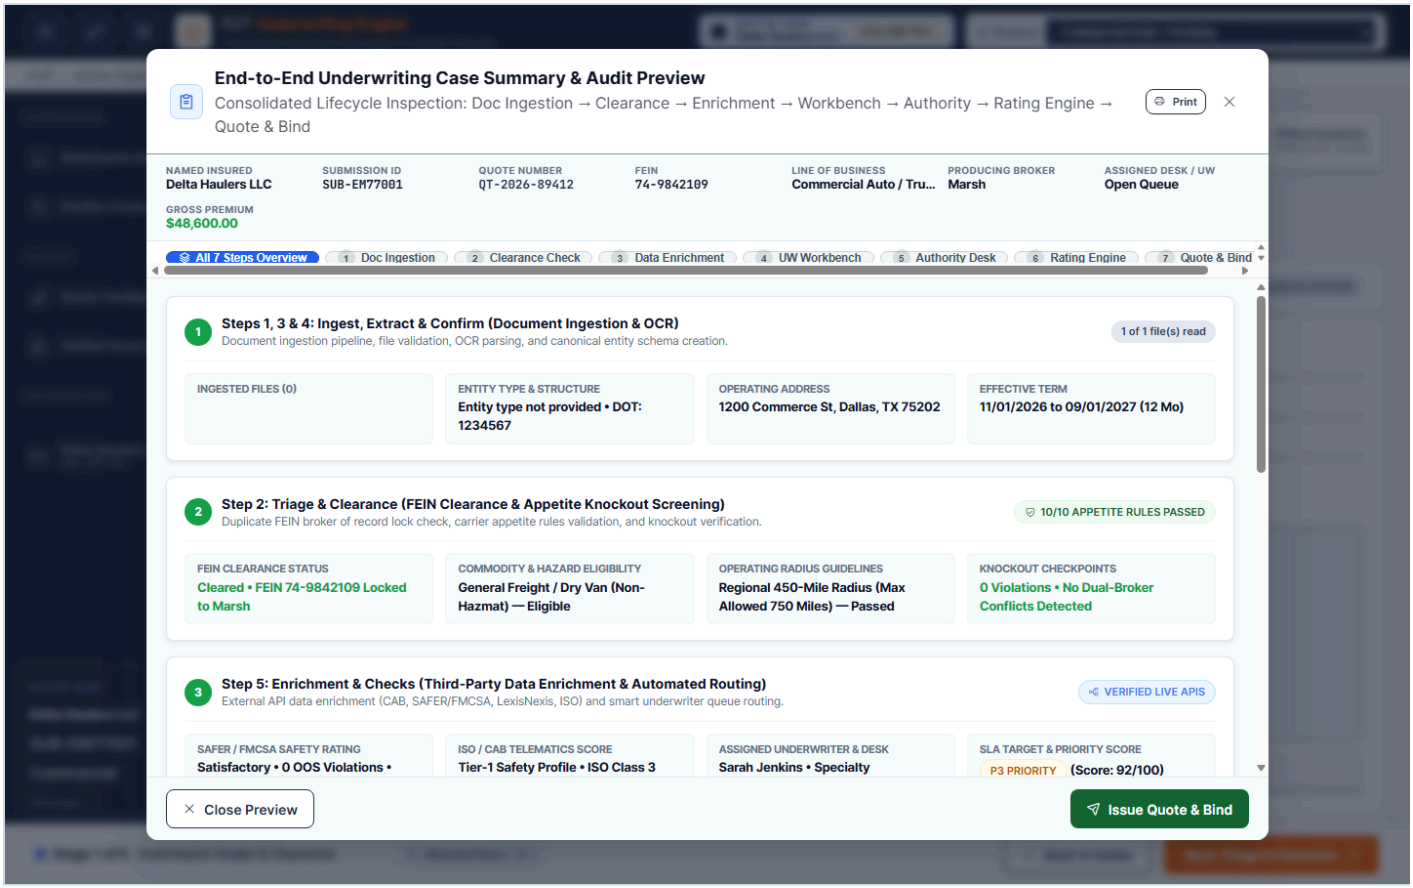

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

End-to-End Case Summary & Audit Preview

> "End-to-End Underwriting Case Summary & Audit Preview": a pop-up, opened with the Summary button, that shows the whole case in one place. The strip at the top holds insured, submission id, quote number, FEIN, line, broker, assigned underwriter and gross premium ("Not rated yet" until a rating file is imported). Below are tabs and one card per stage built from what has actually been recorded on the case.

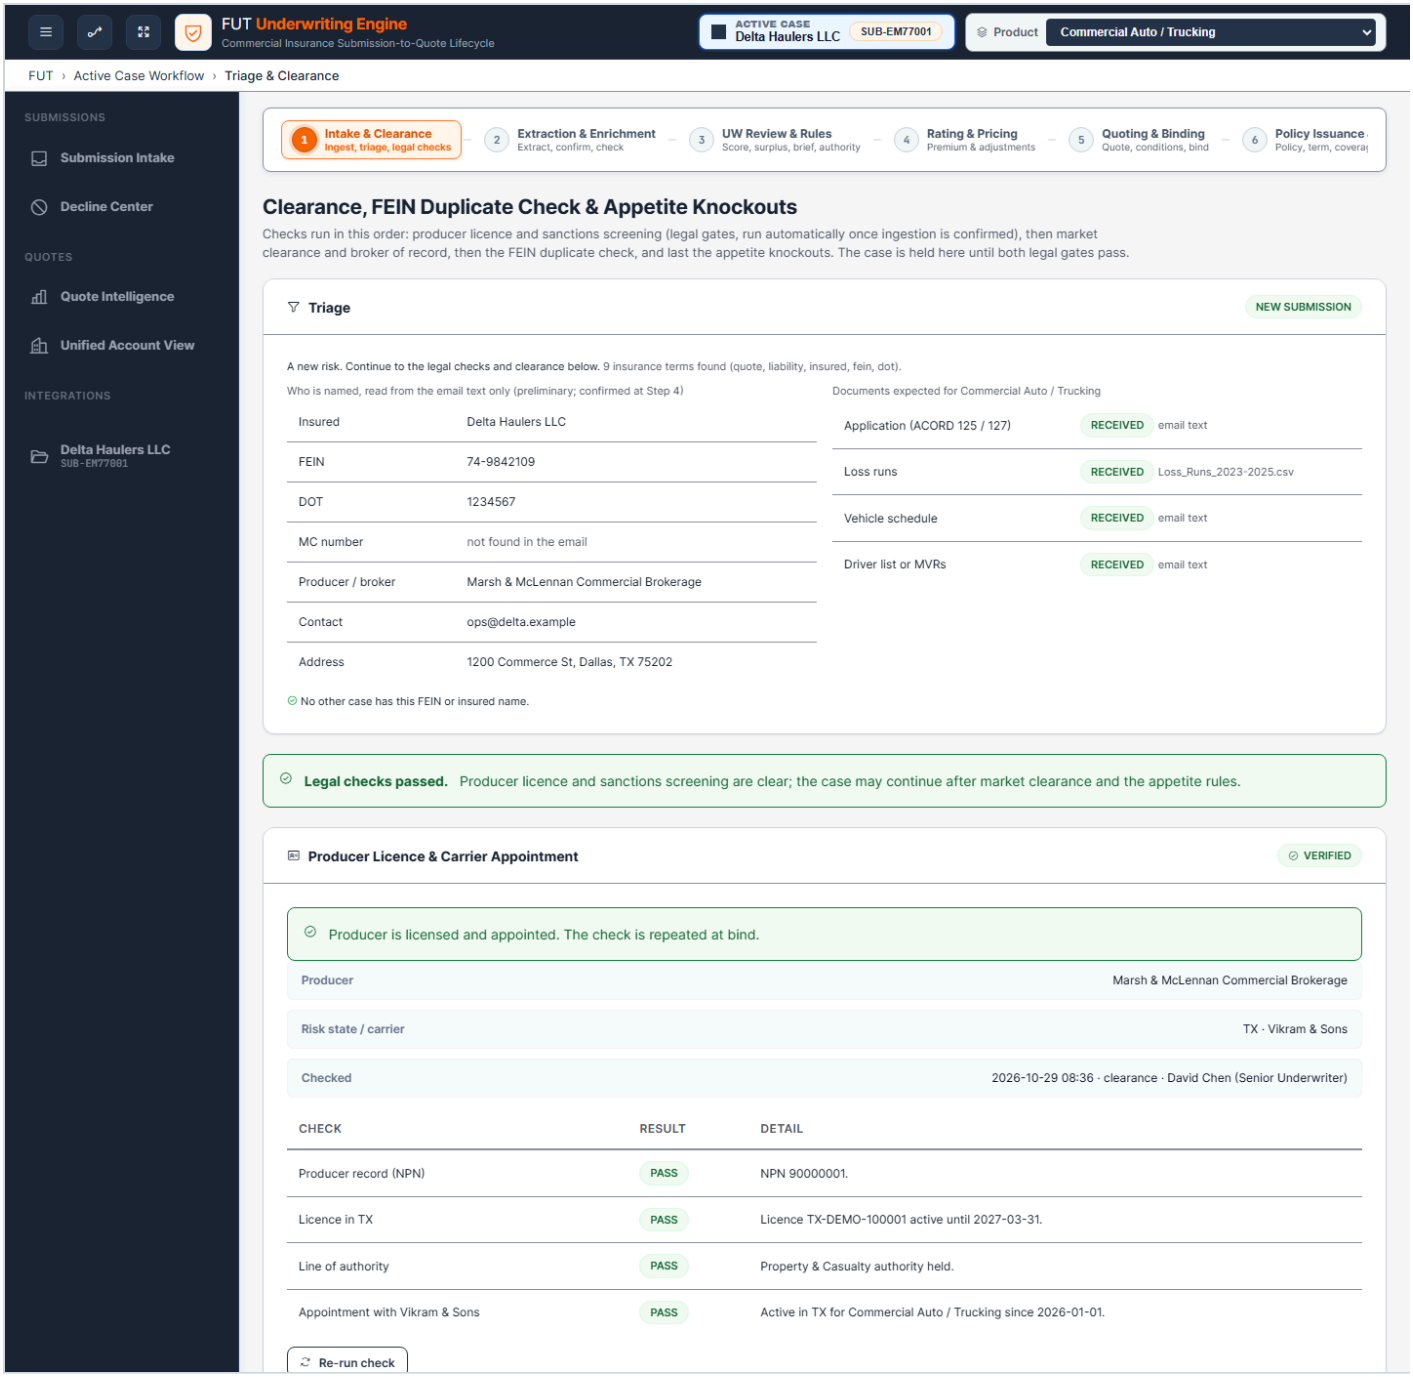

- Where something has not happened yet the card says so ("Not Screened", "Not checked yet", "Not provided") instead of showing a made-up value.
- Print produces a paper copy, and an Issue Quote & Bind button sits at the bottom.

Step 2: Triage & Clearance

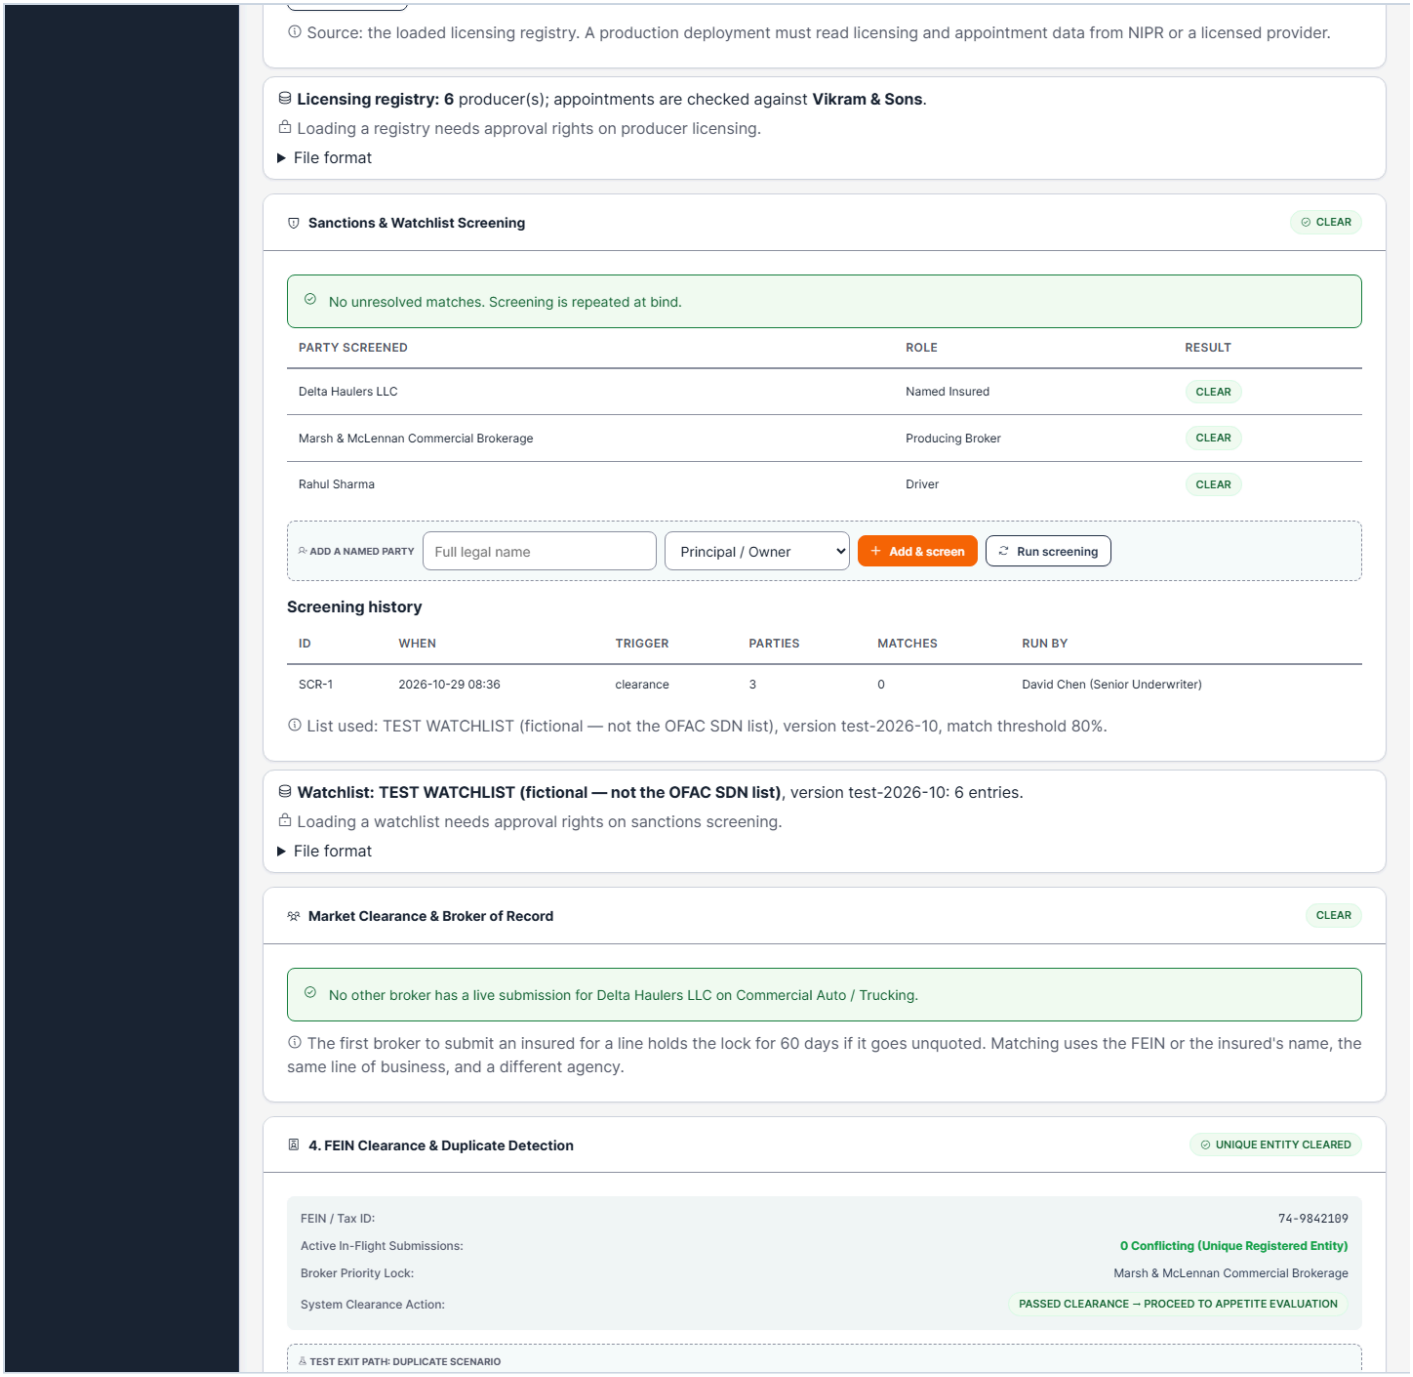

> Step 2 (Stage 1): Triage & Clearance. The page opens with a Triage card. It says what kind of message this is (here a new submission; the other kinds are renewal, policy change, follow-up to an open case, and not an insurance submission), who is named (insured, FEIN, DOT, producer, contact, read from the email text only, so marked preliminary), which documents of the expected set arrived (application, loss runs, vehicle schedule, driver list; each marked Received with where it was found) and whether another case already has the same FEIN or name. Below it the legal checks run by themselves: producer licence and carrier appointment, then sanctions screening, then market clearance and broker of record, then the duplicate-FEIN check, and last the appetite rules table.

- Triage reads the email before extraction so the legal checks have a real name and producer to check. It fills only fields that are still placeholders and never alters the raw email.
- If another producer already holds the insured, the card says it is a market conflict; if the same producer sent it again, it says to attach it to the earlier case.
- The case is held here until the producer licence and the sanctions check both pass. Both read lists loaded for the session (here a fictional test registry and test watchlist, not NIPR or OFAC).
- A missing document can be asked for with one click, which opens the request for information.

Next: Extract →

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 3: Extract

> Step 3 (Stage 2): Extract. Each file is read by the extractor its type needs, and the page lists what happened: the file name, what it was detected as (here a loss run), how it was read (direct text and table parsing), the result (Read) and any notes. The header counts what came out (2 vehicles, 1 driver, 2 claims). Under it the extraction pipeline shows file intake (stored unchanged), content extraction (read) and the canonical record (still pending validation).

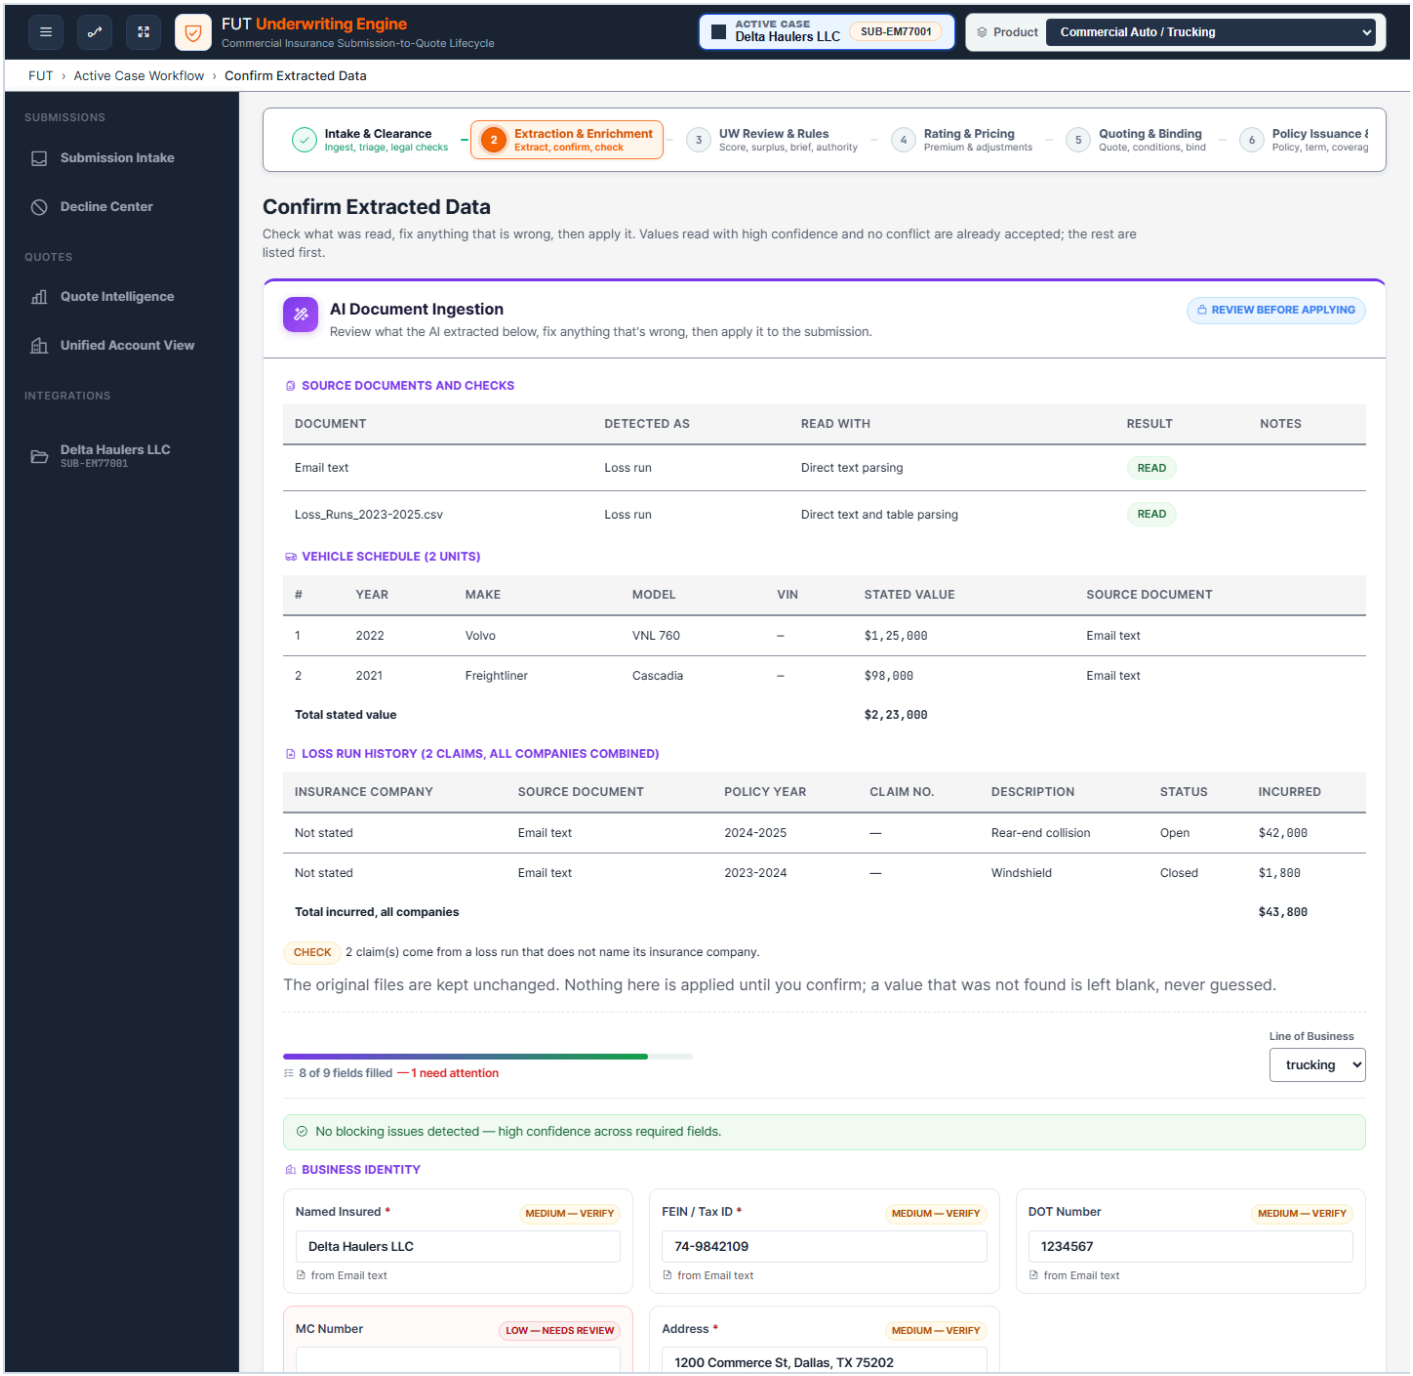

- Scanned files and images cannot be read until an OCR service is connected; they are listed as "Needs OCR" and nothing is guessed from them.
- Reading applies nothing to the case. The values are checked and applied at Step 4.

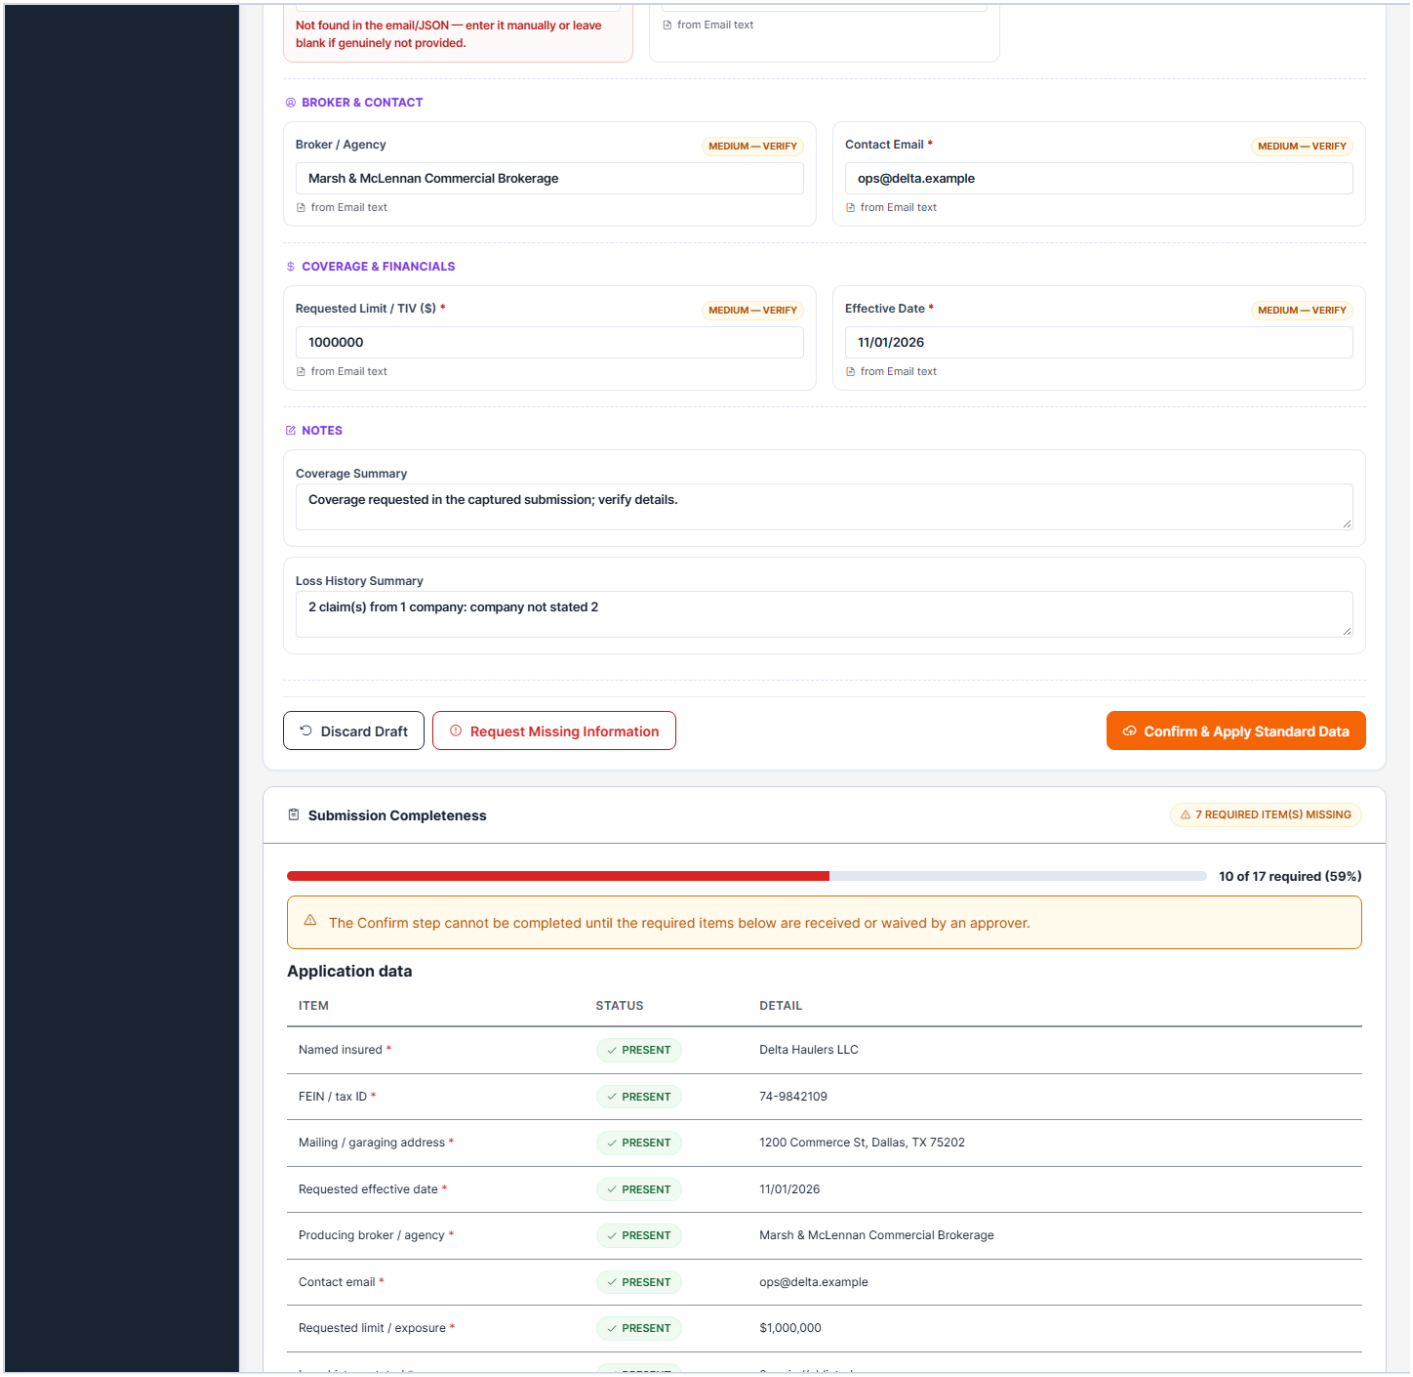

Step 4: Confirm (before applying)

> Step 4 (Stage 2): Confirm, before anything is applied. The review shows the source documents and how each was read, the vehicle schedule found (2 units, total stated value $223,000), the loss run history (2 claims, $43,800 incurred) and any checks, then every field with a confidence badge and the document it came from (Medium: verify, or Low: needs review where a value was not found).

- A value that was not found is left blank, never guessed. The fields that need a person are flagged and counted ("8 of 9 fields filled, 1 needs attention").
- Documents that disagree are listed under "Conflicts between documents".
- "Confirm & Apply Standard Data" at the bottom writes the confirmed values onto the case. An email case cannot leave this step until it has been applied.

Part 1 of 3, continued on the next page

Step 4: Confirm (before applying) (part 3 of 3)

Loss history stated *	✓ PRESENT	2 period(s) listed
USDOT number *	✓ PRESENT	1234567

Documents

ITEM	STATUS	DETAIL
Currently valued loss runs *	MISSING	Obtain from each prior carrier for the look-back period; confirm valuation is within 90 days.
Vehicle schedule / SOV *	MISSING	A statement of values or unit schedule.
Driver list or MVRs *	MISSING	Driver list with licence details, or MVRs.

Reason to waive (10+ char) Waive

Re-check | Fetch missing items from attached documents | Request missing items from Marsh & McLennan Commercial Brokerage

Last checked 2026-10-29 08:36

ⓘ The check reads the submission's data fields, schedules, extracted values and the names of attached documents. It cannot read inside a PDF, so currently valued loss runs must be confirmed by the underwriter. Checklists are configuration (COMPLETENESS_CHECKLISTS) and can also be extended by the product JSON.

Phase 1 Step Flow: The pipeline reads raw PDF forms and tables without manual re-keying and converts them into standard data fields that every subsequent clearance and underwriting phase accesses.

Stage 2 of 6 · Extraction & Data Enrichment | Attached Docs (0) | ← Previous (Extract) | Next: Enrich & Check →

Step 4: Confirm (after applying, with the completeness check)

> Step 4 after the values are applied: the Submission Completeness check. It lists every item the case needs for its line of business (named insured, FEIN, address, effective date, broker, contact, requested limit, loss history, USDOT, vehicle schedule, driver list and so on) and marks each Present or Missing. Here 10 of 17 required items are present and 7 are missing, so the page says the Confirm step cannot be completed.

- A missing item can be requested from the producer, or waived by an approver with a written reason (10 or more characters).
- The effective date, the FEIN and the other values now read exactly as typed in the email; a numbered line such as "Unit 1:" is no longer run into the line above it.

Part 1 of 2, continued on the next page

Step 4: Confirm (after applying, with the completeness check) (part 2 of 2)

Stage 2 of 6 · Extraction & Data Enrichment | Attached Docs (0) | ← Previous (Extract) | Next: Enrich & Check →

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 5: Enrich & Check (registry, loss run analysis, statement of values)

> Step 5 (Stage 2): Enrich & Check. The enrichment cards (DOT safety score, inspection violations, commercial credit) and the queue priority and assignment come first. Then the Registry Verification and Vehicle and Driver cards, which say plainly that no registry is connected, so nothing is shown as verified. Further down the page are two cards added with the 14-step flow: the Loss run analysis (claims, incurred, open and large claims, frequency trend and any policy year with no loss run, for the last three policy years) and the Statement of values (each scheduled unit or location with its value, the total, and any missing, repeated or odd value).

- A claim of $100,000 or more is called out as large, and a loss run valued more than 90 days ago is flagged as stale.
- For property, the locations and values are read from an attached statement of values; for trucking the schedule of vehicles and their stated values is used.
- Nothing here is invented: a figure that is not in the documents reads "not stated".

Part 1 of 2, continued on the next page

Step 5: Enrich & Check (registry, loss run analysis, statement of values) (part 2 of 2)

1	**Apex Freight LLC**	SMP2000000	TX	Class A	5 Years	NOT VERIFIED (NO REGISTRY CONNECTED)

Loss run analysis (last 3 policy years)

CHECK

POLICY YEAR	CLAIMS	INCURRED	OPEN	LARGEST
2023-2024	1	$1,800	0	$1,800
2024-2025	1	$4,200	0	$4,200
2025-2026	no loss run	—	—	—
Total	**2**	**$6,000**	**0**	**$4,200**

Average claim $3,000 · frequency flat · valuation date not stated. A large claim is $100,000 or more.

CHECK No loss run covers 2025-2026. Ask for it, or a clean-year letter.

Note 1 claim row is outside the three policy years and not counted.

Statement of values (scheduled units)

Next: Score & Appetite →

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 6: Score & Appetite Match (workbench)

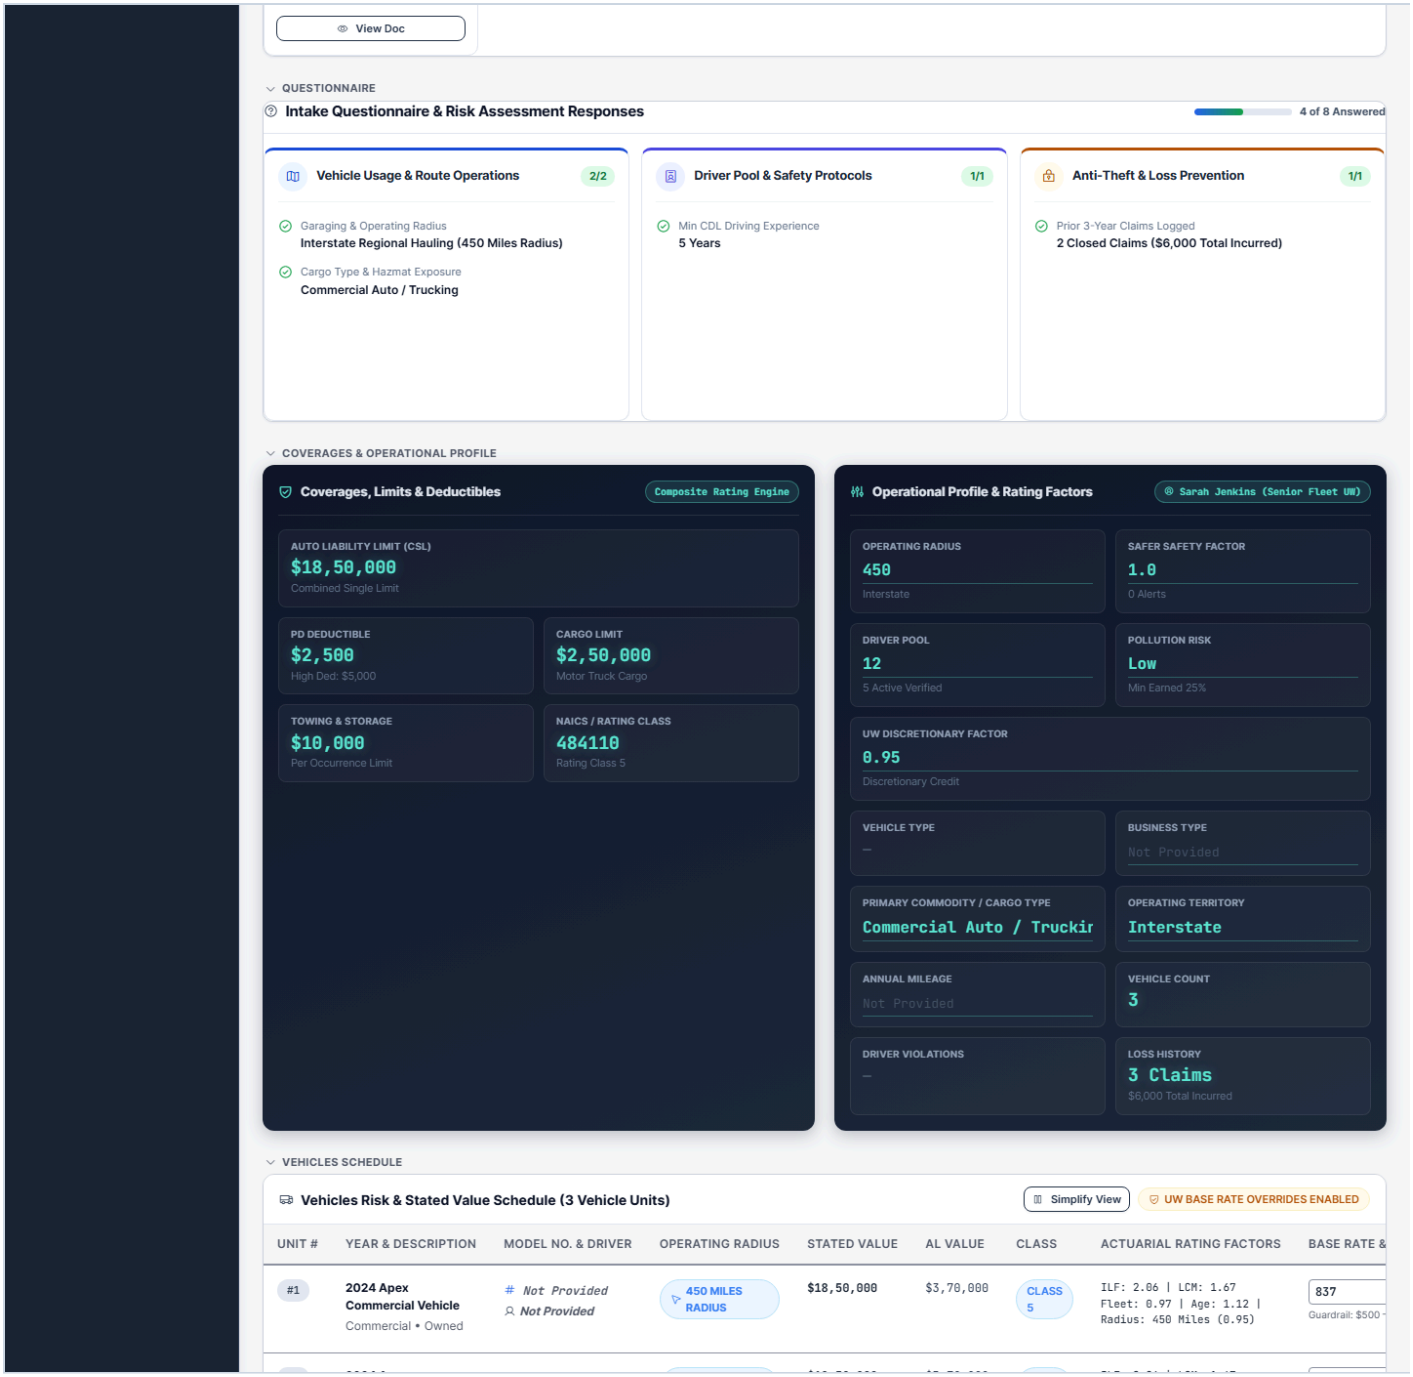

> Step 6 (Stage 3): Score & Appetite Match, on the Underwriting Workbench. A new Appetite match card sits first: the share of the product's appetite rules the risk passes, whether the rules it fails can be overridden by an approver, and the risk score. Below is the workbench itself: header strip, applicant and policy information, attached documents, questionnaire answers, coverages, vehicle and driver schedules, loss runs and the risk score.

- A rule marked as not overridable puts the risk outside appetite. A rule an approver may override leaves it "in appetite with exceptions".
- With no product loaded there are no rules to evaluate, and the card says that rather than showing a pass.

Stage 3 of 6 · Underwriting Review & Rules | Attached Docs (6) | ← Previous (Enrich & Check) | Next: Surplus Lines →

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 7: Surplus Lines (as first opened)

> Step 7 (Stage 3): Surplus Lines, as first opened. This step shows only the Surplus Lines card. The underwriter must decide whether the risk is placed with an admitted carrier or in the surplus lines (non-admitted) market; until a placement is chosen the screen says so.

- A surplus lines placement needs a state tax basis, a diligent search of the admitted market and a licensed placing broker before the case can be priced. Tax is decided here, before rating.

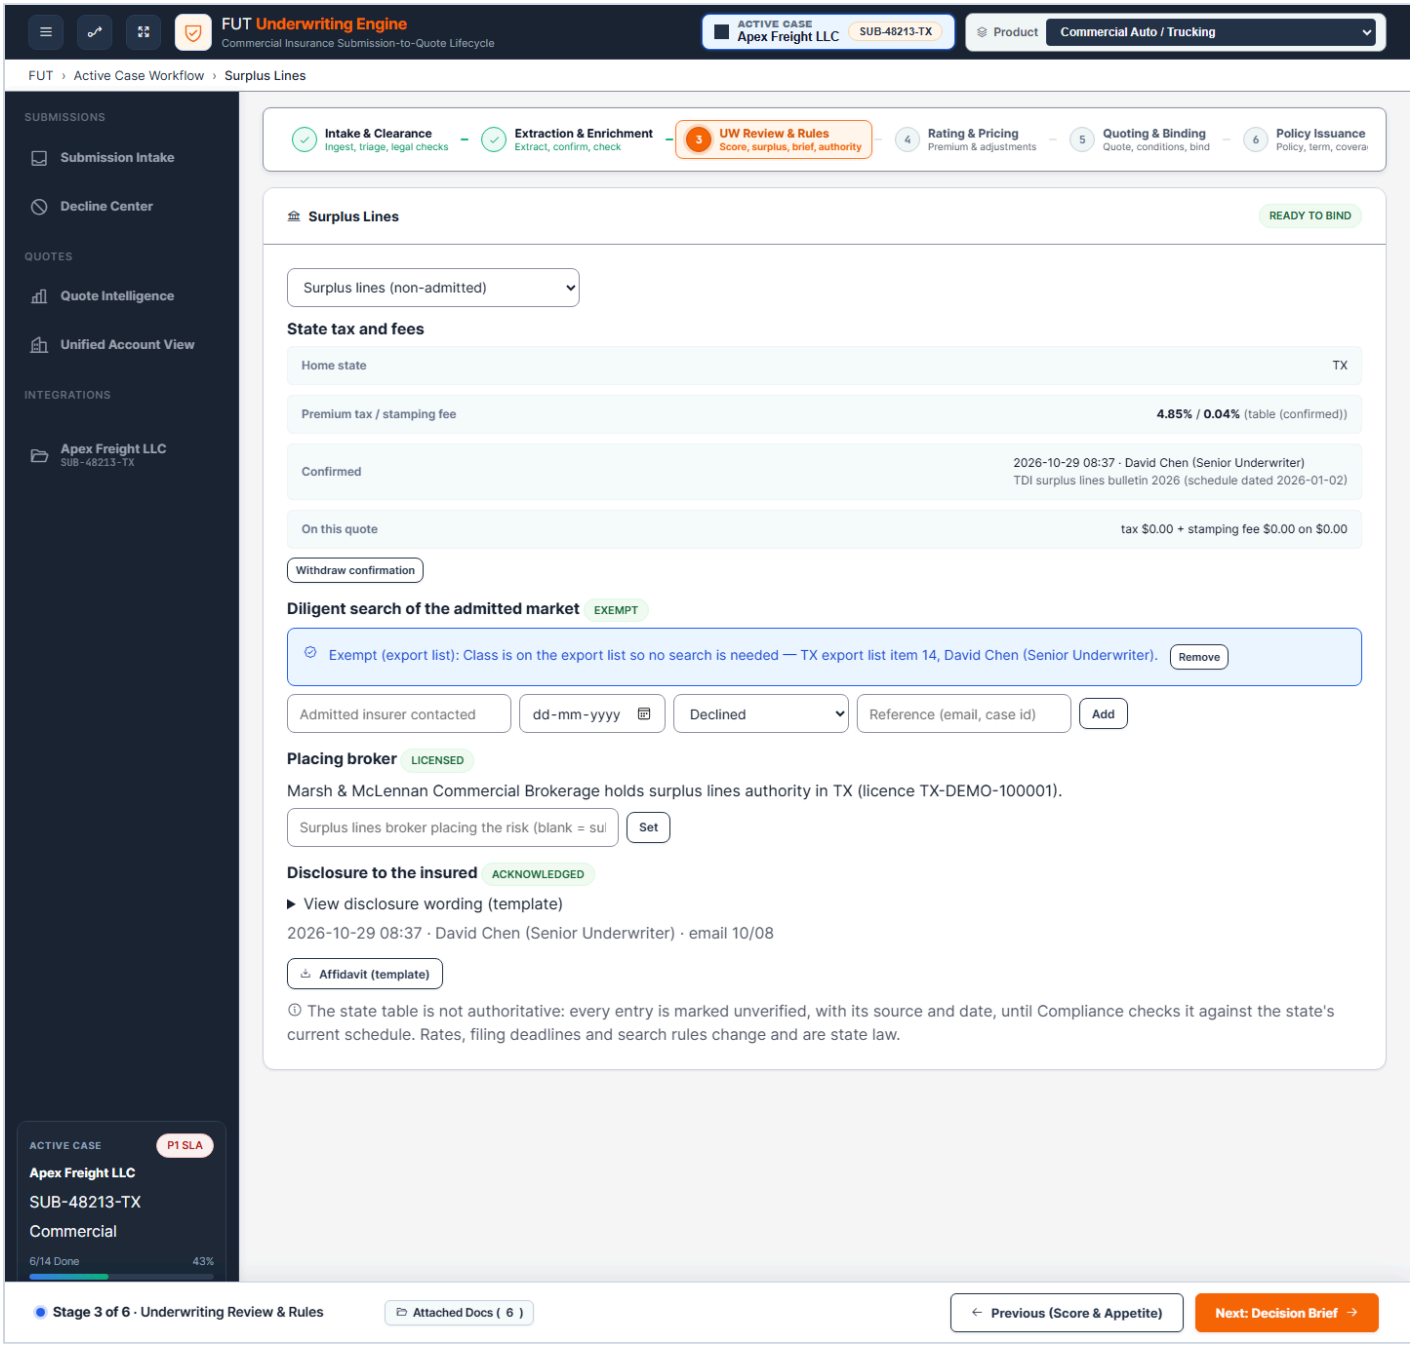

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 7: Surplus Lines (recorded)

> The same step after a surplus lines placement has been recorded (sample entries). It shows the home state (TX), the premium tax and stamping fee rates, confirmed by an approver against a named source and date; the diligent search of the admitted market, here recorded as exempt because the class is on the state's export list; the placing broker and the licence it holds; and the acknowledgment that the insured was given the surplus lines disclosure.

- The tax rates in this prototype are marked unverified until Compliance checks them against the state's current schedule.
- An affidavit template can be downloaded from this card.

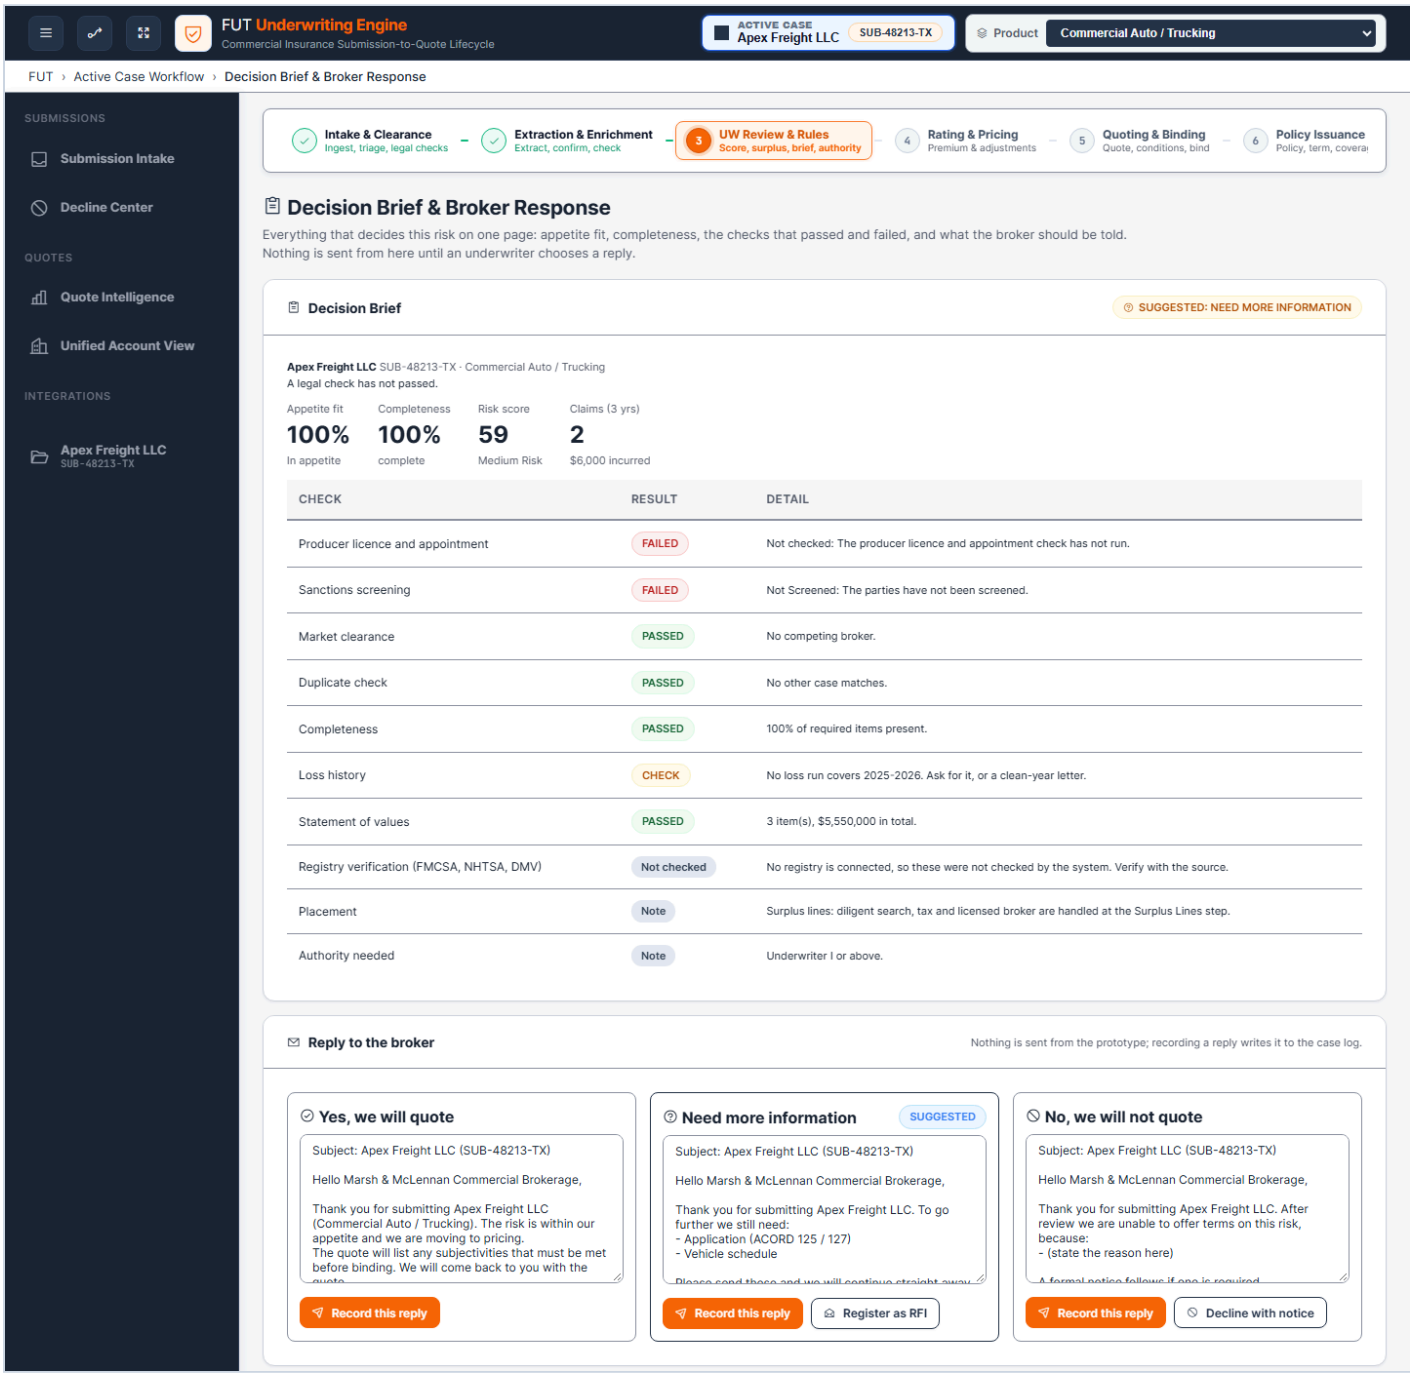

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 8: Decision Brief & Broker Response

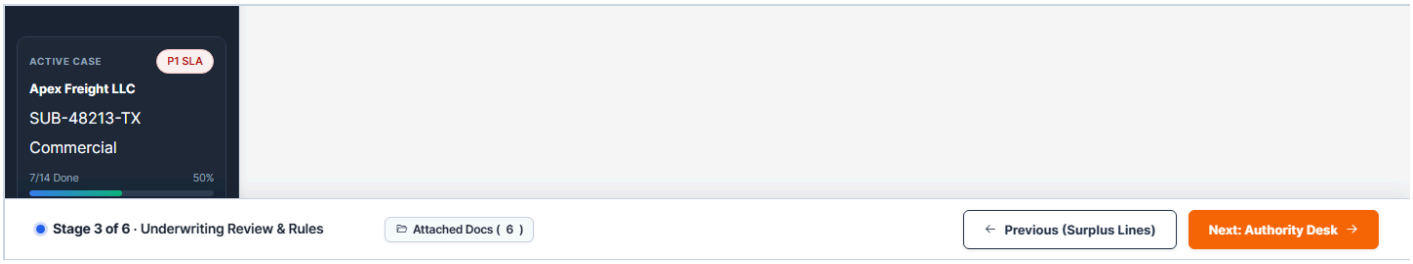

> Step 8 (Stage 3): Decision Brief & Broker Response. One page of everything that decides the risk: appetite fit, completeness, risk score and claims, then a table of every check with its result (producer licence, sanctions, market clearance, duplicates, completeness, loss history, statement of values, registry verification, placement, and the authority level needed). The page ends with a suggestion: quote, ask for more information, or decline.

- Below the brief are three editable reply drafts for the broker: yes, we will quote; we need more information; no, we will not quote. The suggested one is marked.
- "Record this reply" writes the reply to the case log. Nothing is sent from the prototype, because it has no mail server; the reply is sent from the person's own email.
- "Decline with notice" goes through the existing decline flow so the adverse-action notice rules still apply, and "Register as RFI" registers the missing items on the case.
- The registry check is shown as Not checked, never as passed, because no registry is connected.

Part 1 of 2, continued on the next page

Step 8: Decision Brief & Broker Response (part 2 of 2)

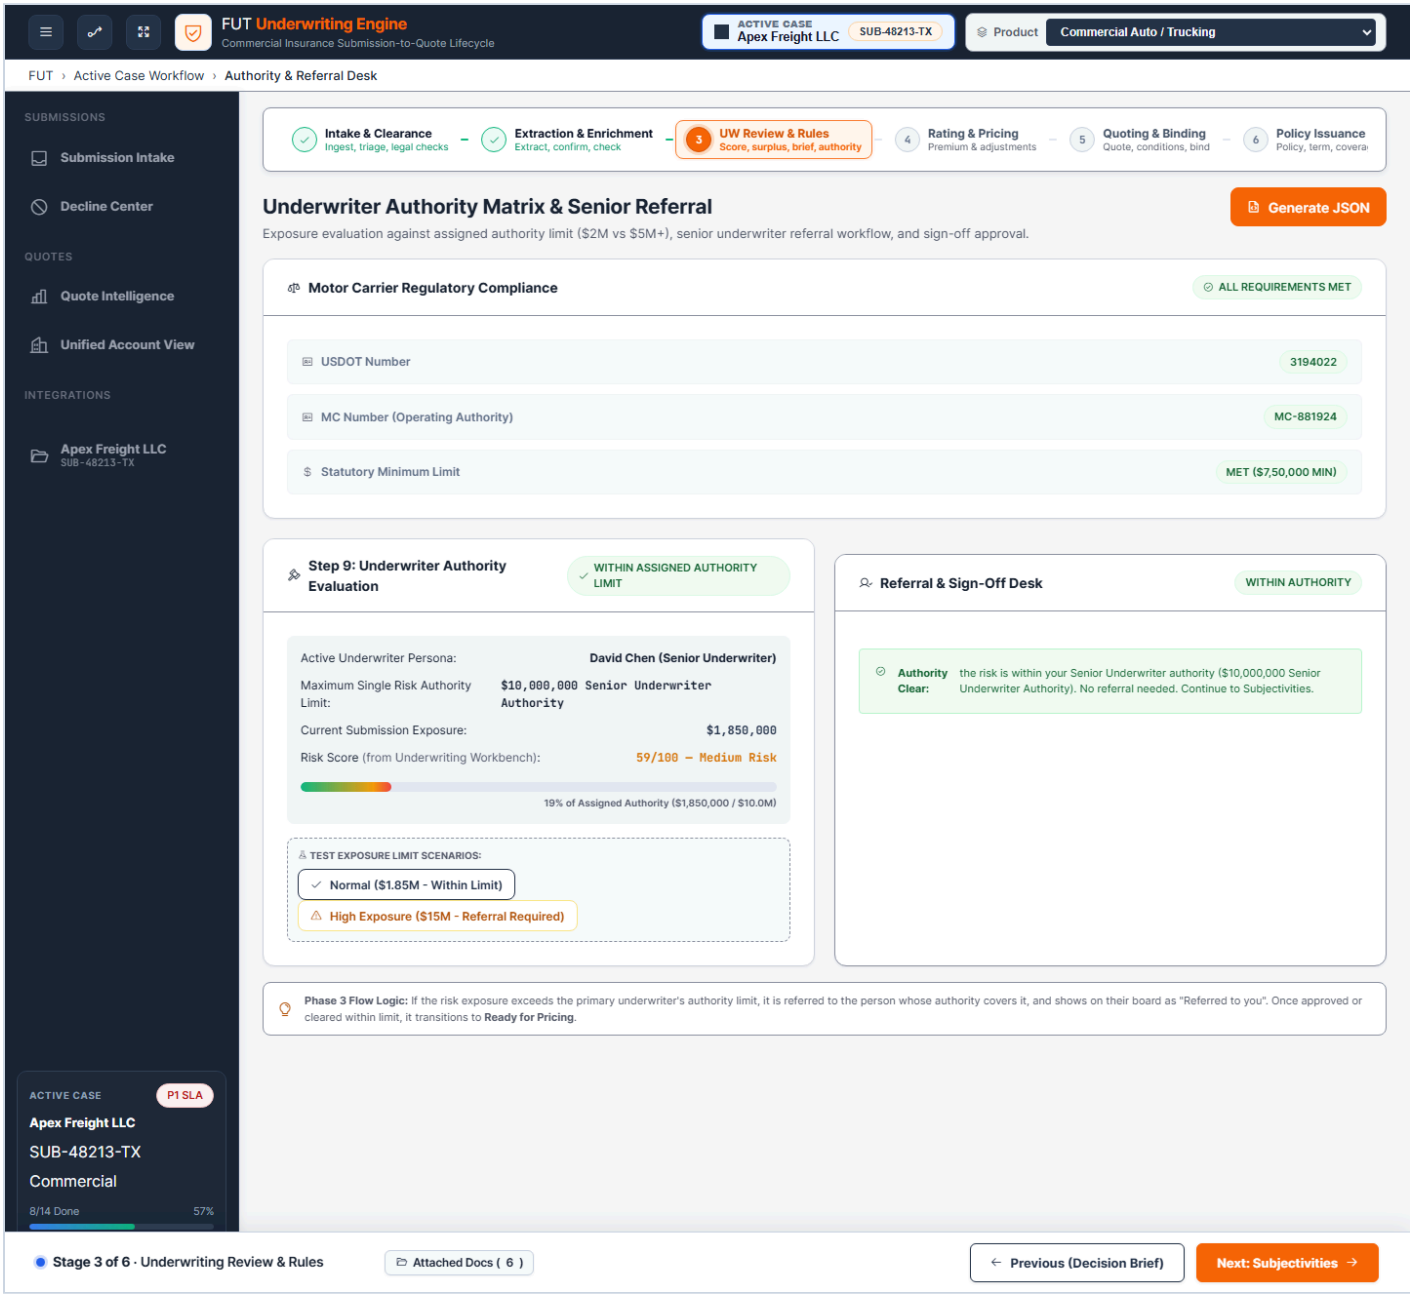

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 9: Authority & Referral Desk

> Step 9 (Stage 3): Authority & Referral Desk, here for a case within the signed-in Senior Underwriter's authority. Motor Carrier Regulatory Compliance checks the USDOT number, the MC number and the statutory minimum limit. Underwriter Authority Evaluation compares the exposure with the signed-in person's authority and shows the risk score. The Referral & Sign-Off Desk beside it says what is needed; when the risk is within authority it says "Authority clear" and the person continues to Subjectivities.

- When the exposure is above the person's authority, the desk becomes a referral (section 4).
- The two "test exposure" buttons only change what this screen shows; they do not change the case.

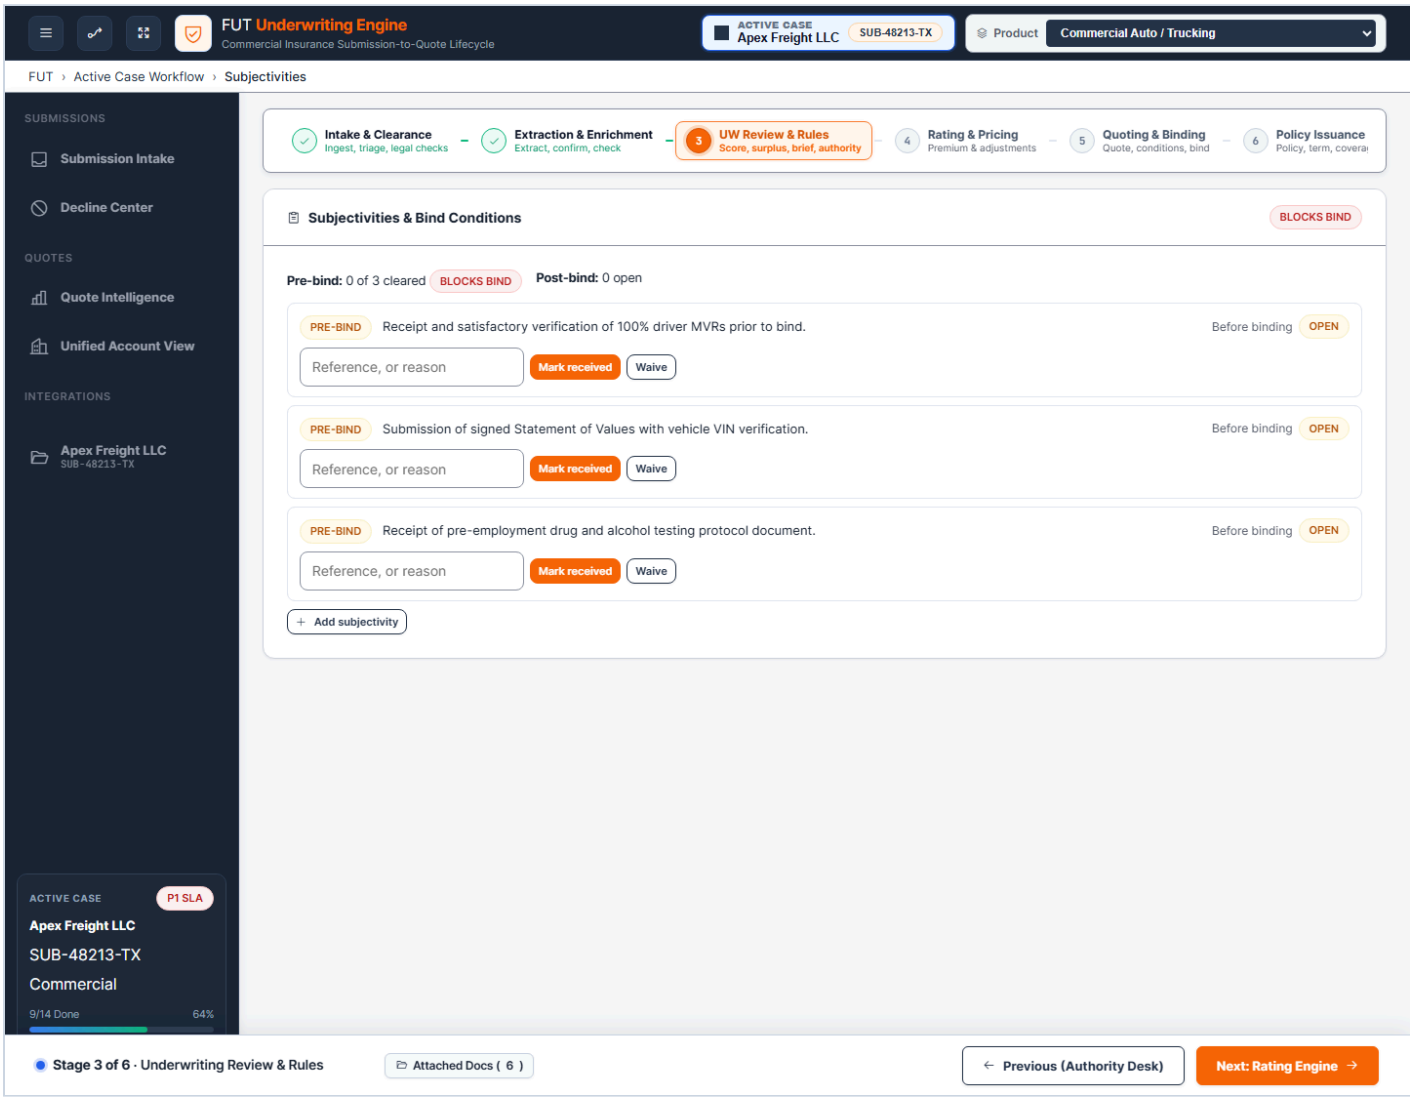

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 10: Subjectivities

> Step 10 (Stage 3): Subjectivities. This step shows only the Subjectivities tracker: "Quote subject to...". Pre-bind items must be received and accepted (or waived with a reason) before the policy can be bound; post-bind items are due after binding and never block.

- Each item has a reference box, a Mark received button and a Waive button. Receiving and accepting are separate steps, by default by different people.
- The same tracker is shown again at the Bind step, where open pre-bind items stop the bind.

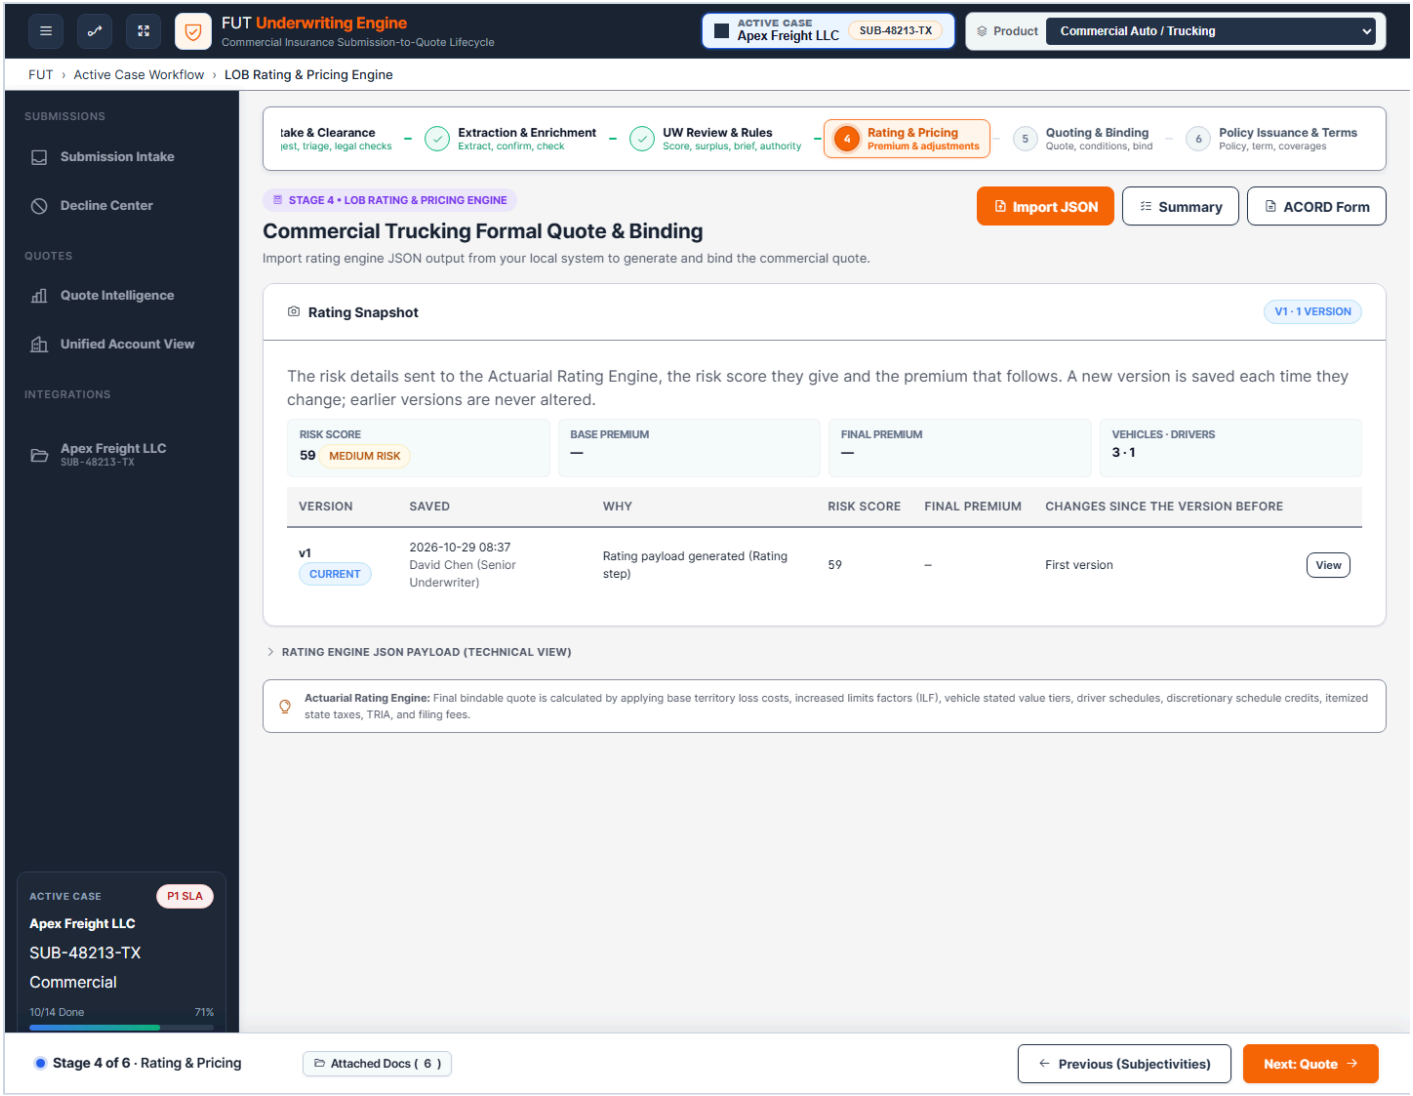

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 11: Rating (no rating file yet)

> Step 11 (Stage 4): Rating. The Rating Snapshot card (the risk details sent to the rating engine, the risk score and the premium, versioned) and the Import JSON button for the rating engine's output. No premium exists until a rating file is imported; there is no sample quote built in.

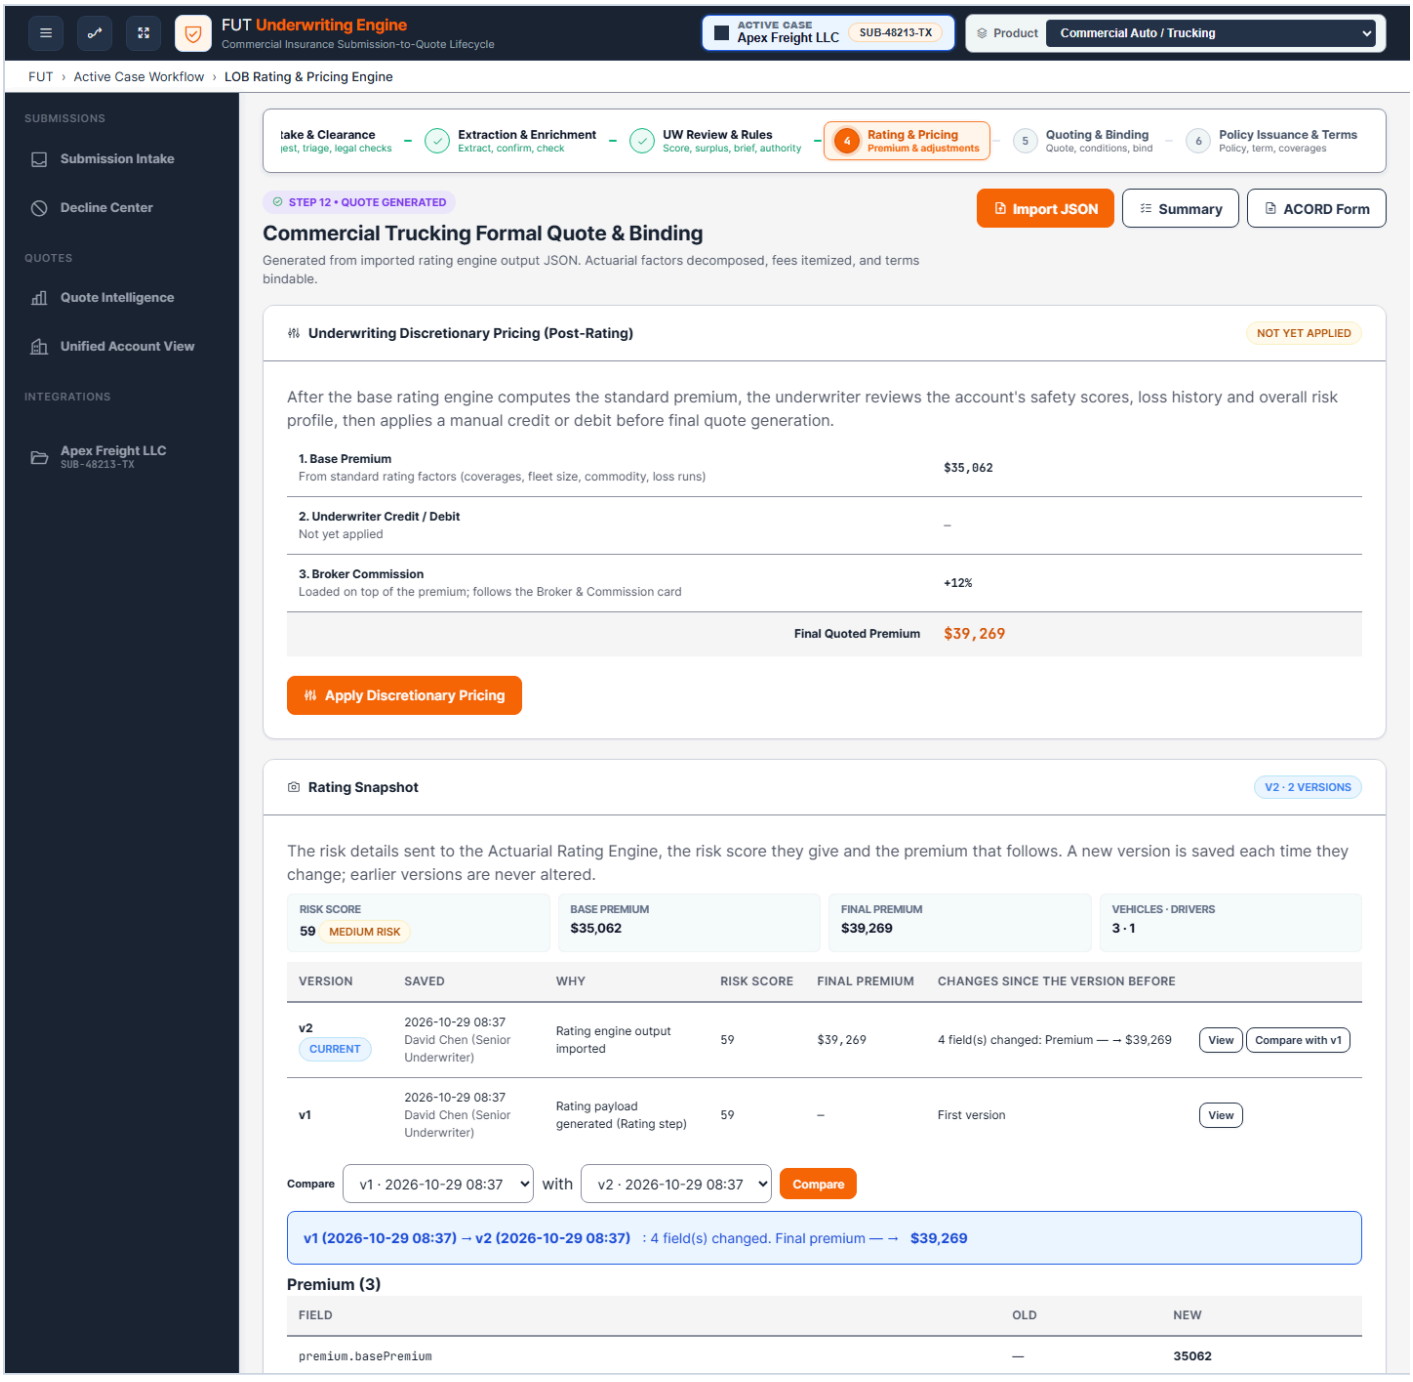

- Surplus lines tax and fees were settled at Step 7, so they are included when the premium is set.

Step 11: Rating (rating imported)

> Step 11 after a rating file is imported. The base premium comes straight from the rating output; the broker commission is loaded on top, giving the final quoted premium. The Underwriting Discretionary Pricing card is where the underwriter may apply a credit or debit within the limits set under Rates & Limits. The Rating Snapshot gains a version and shows what changed.

- Every earlier version of the rating inputs is kept and never altered.

← Previous (Subjectivities)

Next: Quote →

Step 12: Quote (and quote conditions)

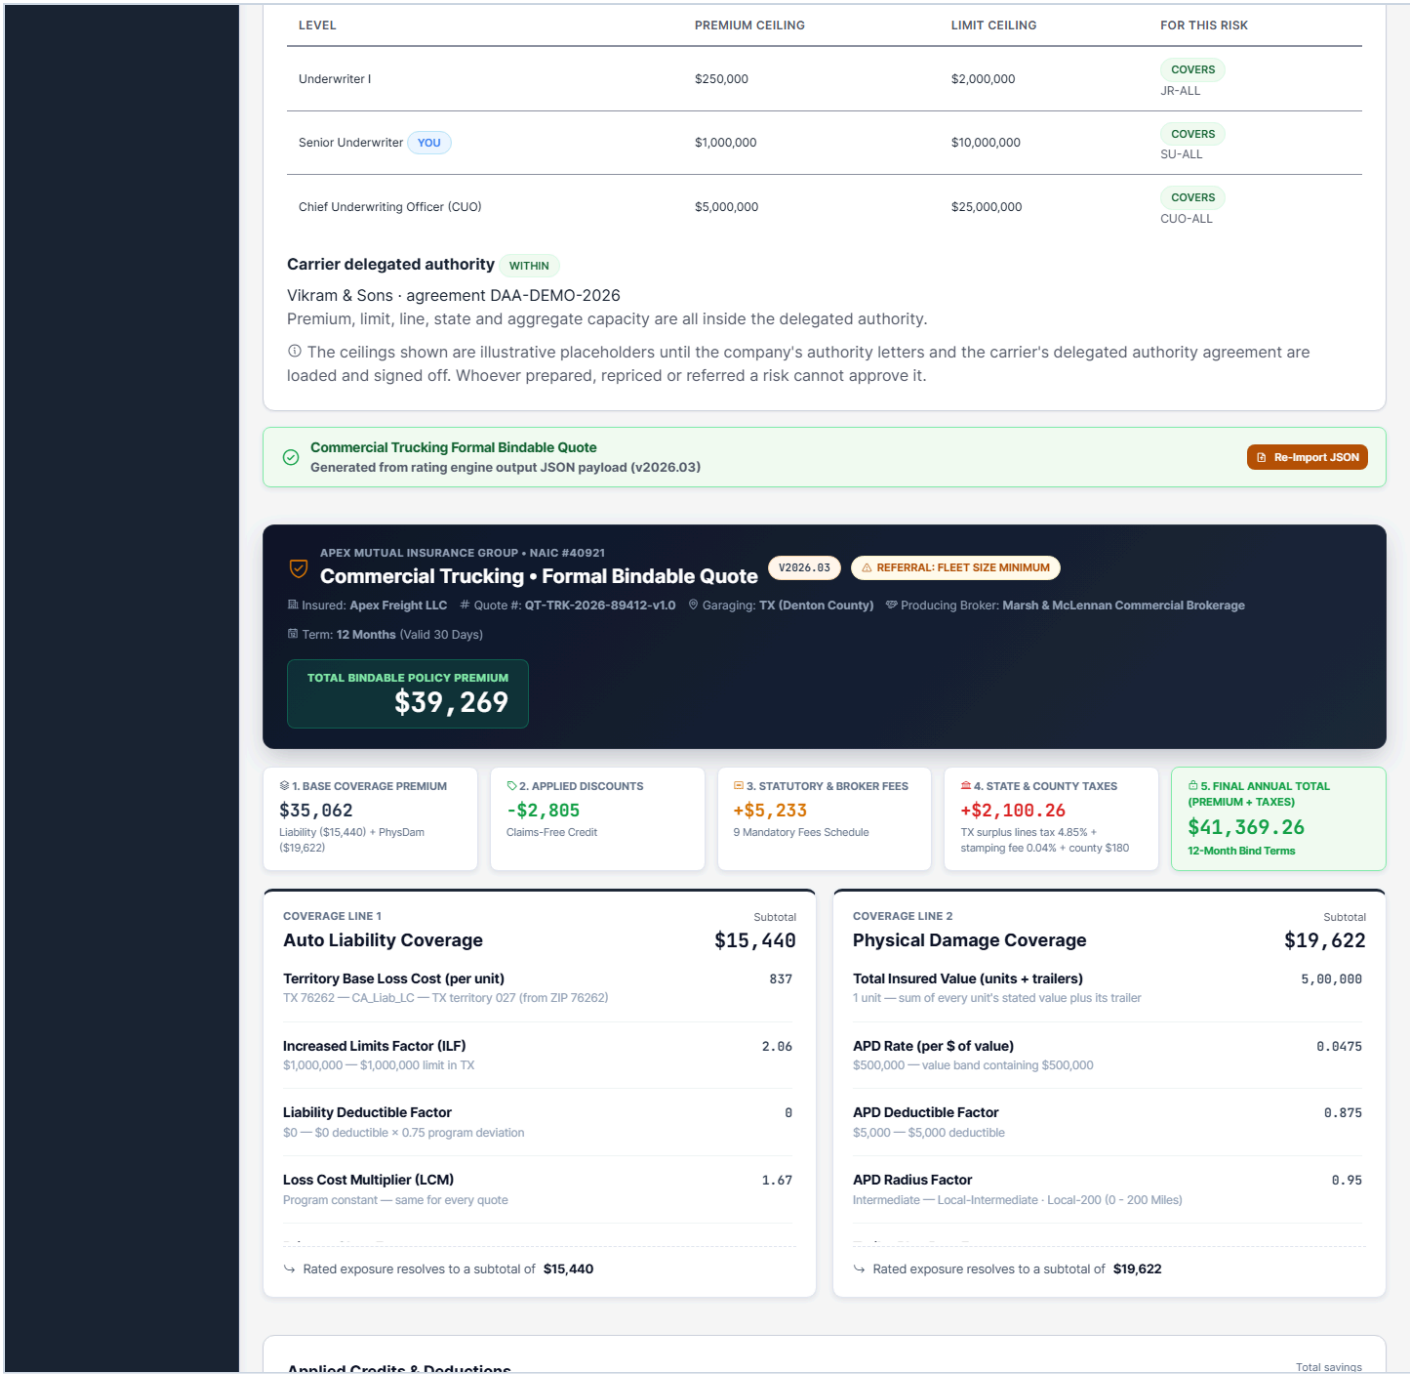

> Step 12 (Stage 5): Quote (and quote conditions). The formal quote and its cards: the TRIA offer, adverse-action notices (the Notice Studio, where a Quote Condition is created when a coverage is held back until the insured meets a condition by a date), the authority card, Broker & Commission, and the Issue Quote & Bind card.

- A Quote Condition (for example installing dashcams) withholds one coverage from the quote until the condition is met in time; if it is, the coverage and its premium are added.
- A quote cannot be issued until its gates pass: surplus lines tax basis, sanctions, producer licence, TRIA and authority.

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

E-signature before the quote is issued

> The "Sign & Bind" pop-up that opens from Issue Quote. The signer types their full legal name and ticks that they have the authority to bind on behalf of the carrier; the date and time of signing are shown. The signature authorises issuing the quote and, later, binding coverage.

- The prototype has no real e-signature service: the signature is a typed name and a tick box, recorded on the case and in the audit log.

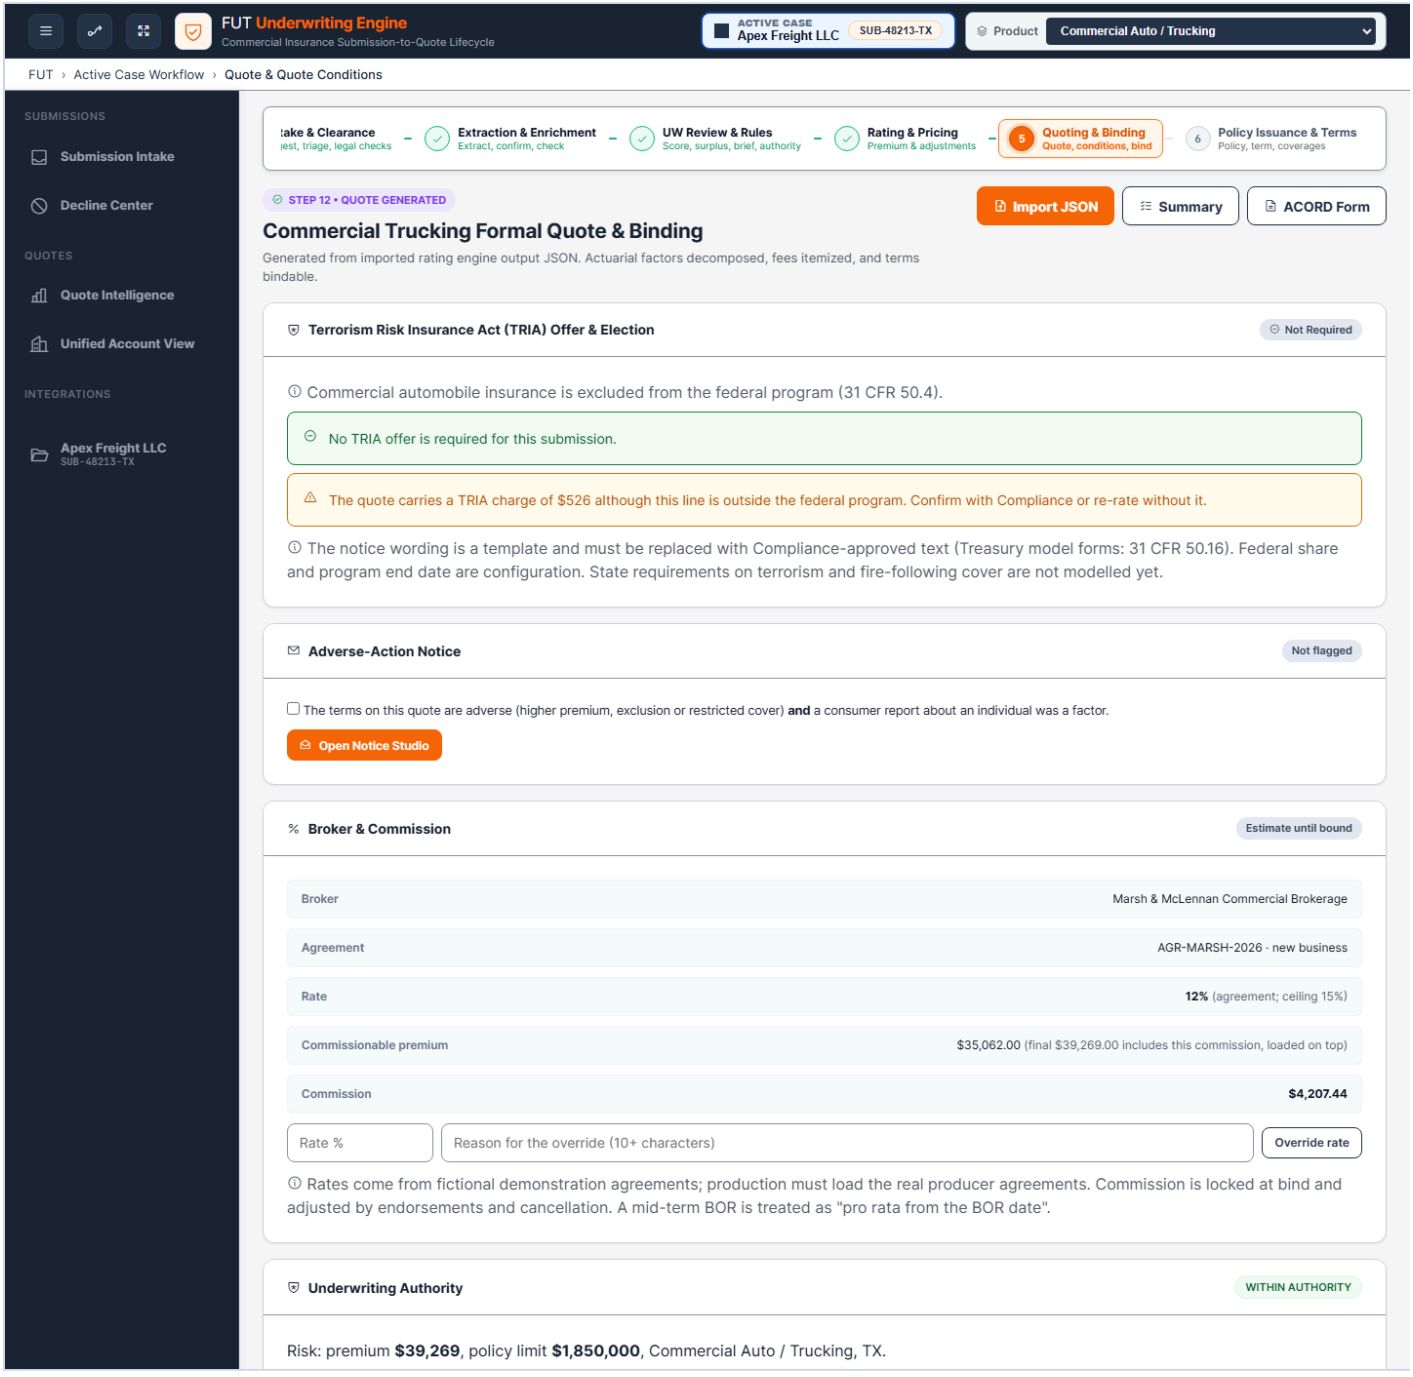

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 12: quote issued, awaiting the customer

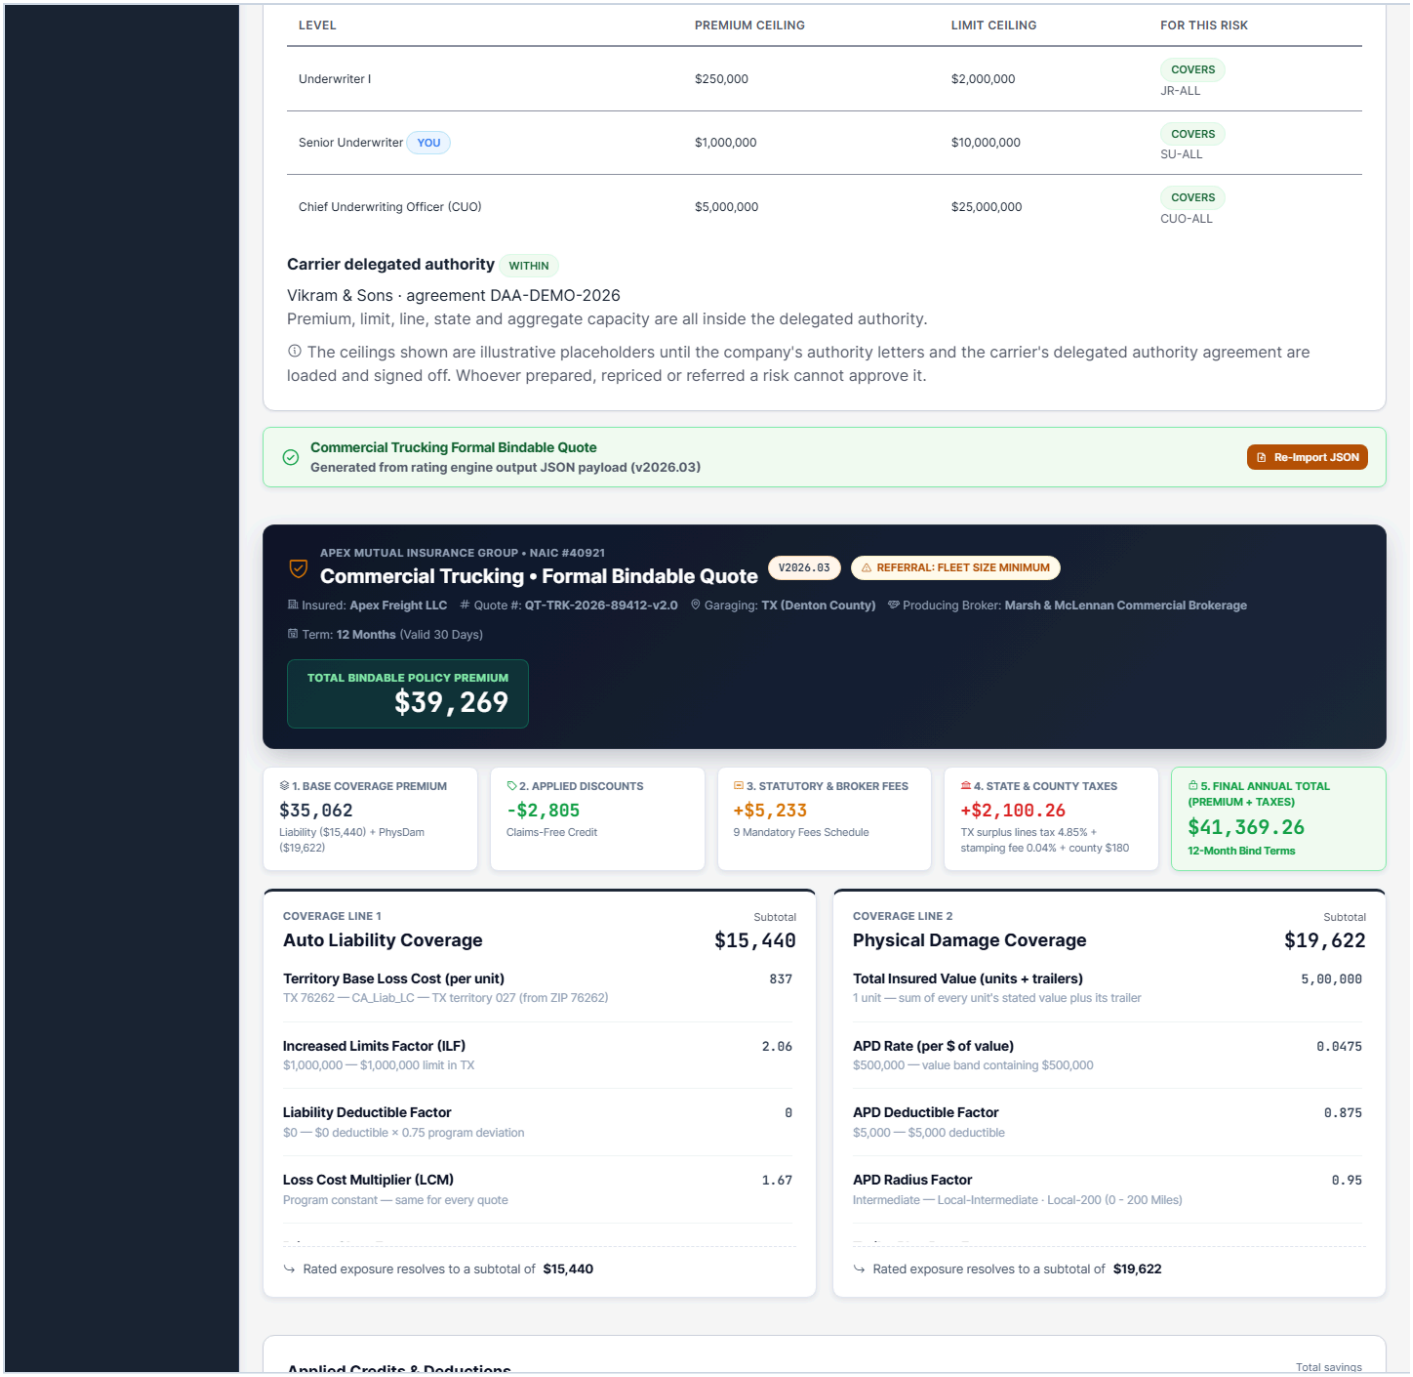

> Step 12 after the quote is issued. A banner states the quote date, the validity date (30 days) and that the quote cannot be bound after that date. A "Record as not taken" button lets the underwriter close the case if the insured does not accept.

- The issued quote can be recorded as "not taken" only after it has been issued.

11/14 Done · 86%

Step 13: Bind (awaiting the customer)

> Step 13 (Stage 5): Bind. This step is the same quote page scrolled to the "Issue Quote & Bind" card, which is shown here on its own, together with the binder, certificates and subjectivities. The card has three stages: 1 Issue quote, 2 Customer accepts, 3 Bind & sync to PAS. Here the quote is issued and the card says "Awaiting customer"; binding stays locked until the customer accepts.

- The prototype simulates the customer's acceptance with a "Simulate Customer Approval" button.

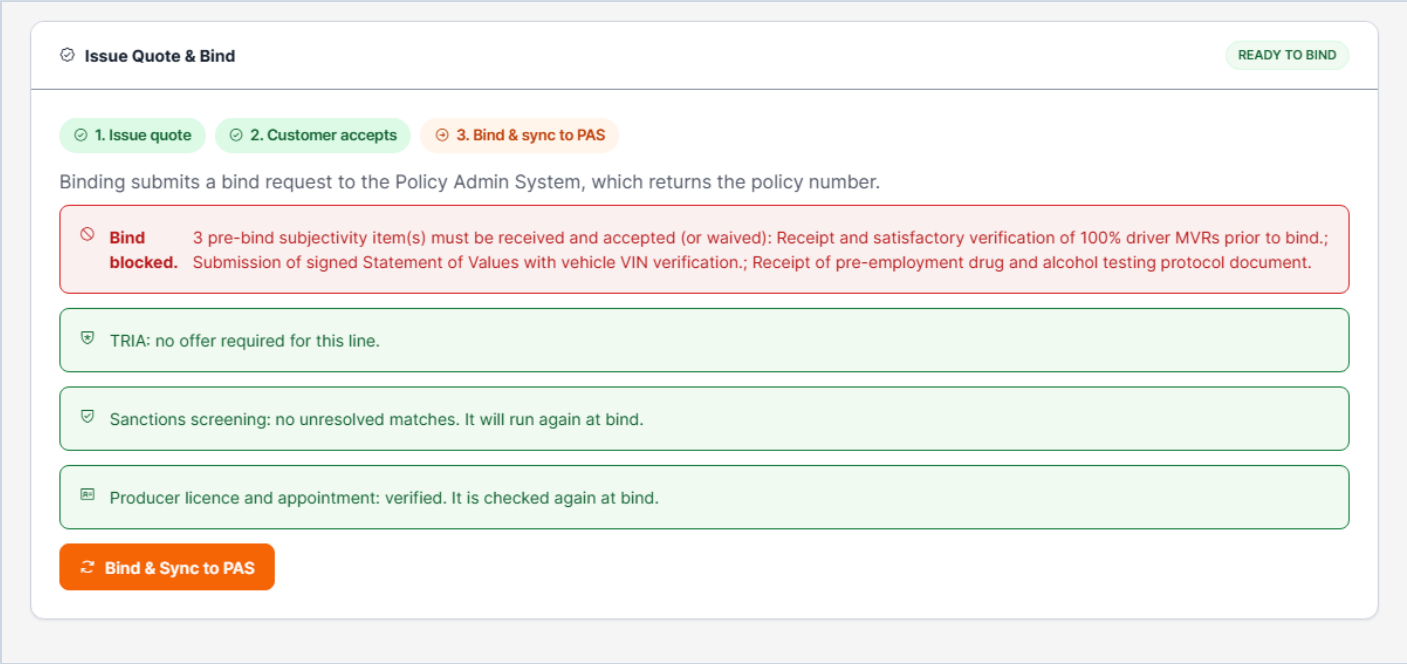

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 13: Bind (customer accepted, ready to bind)

> The same card after the customer has accepted: status "Ready to bind". Before it will bind, the screen re-checks everything and lists the result: pre-bind subjectivities (open ones block the bind), TRIA, sanctions screening (re-run at bind) and producer licence and appointment (checked again at bind). When nothing is blocking, Bind & Sync to PAS sends the bind request to the policy admin system.

- Open pre-bind subjectivities are accepted or waived on the same page, which clears the block.

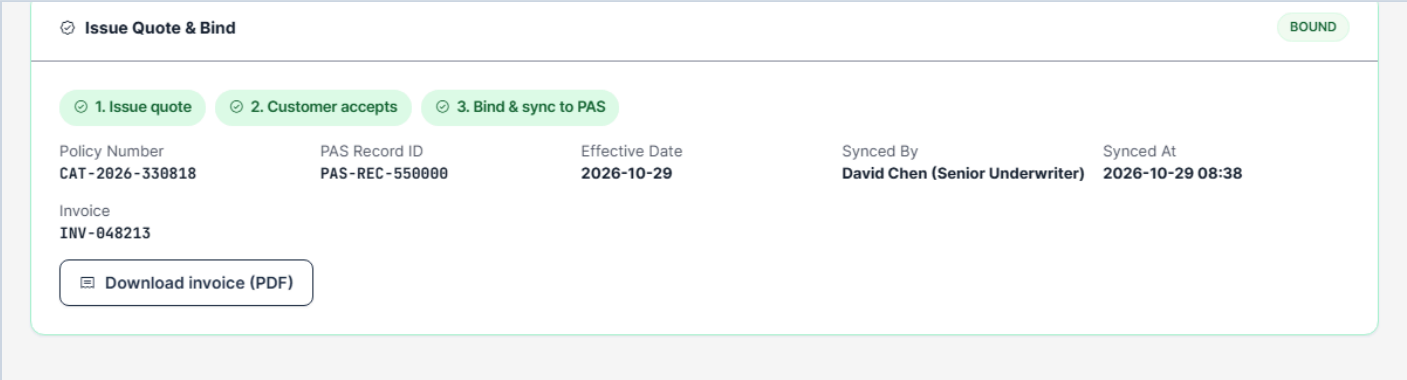

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 13: Bind (policy bound)

> The card once the policy is bound: status "Bound", with the policy number returned by the policy admin system, its record id, effective date, who synced it and when, and the invoice number with a Download invoice (PDF) button. The invoice is created at bind from the bound policy.

- The policy admin system is simulated in this prototype; the number is generated locally.

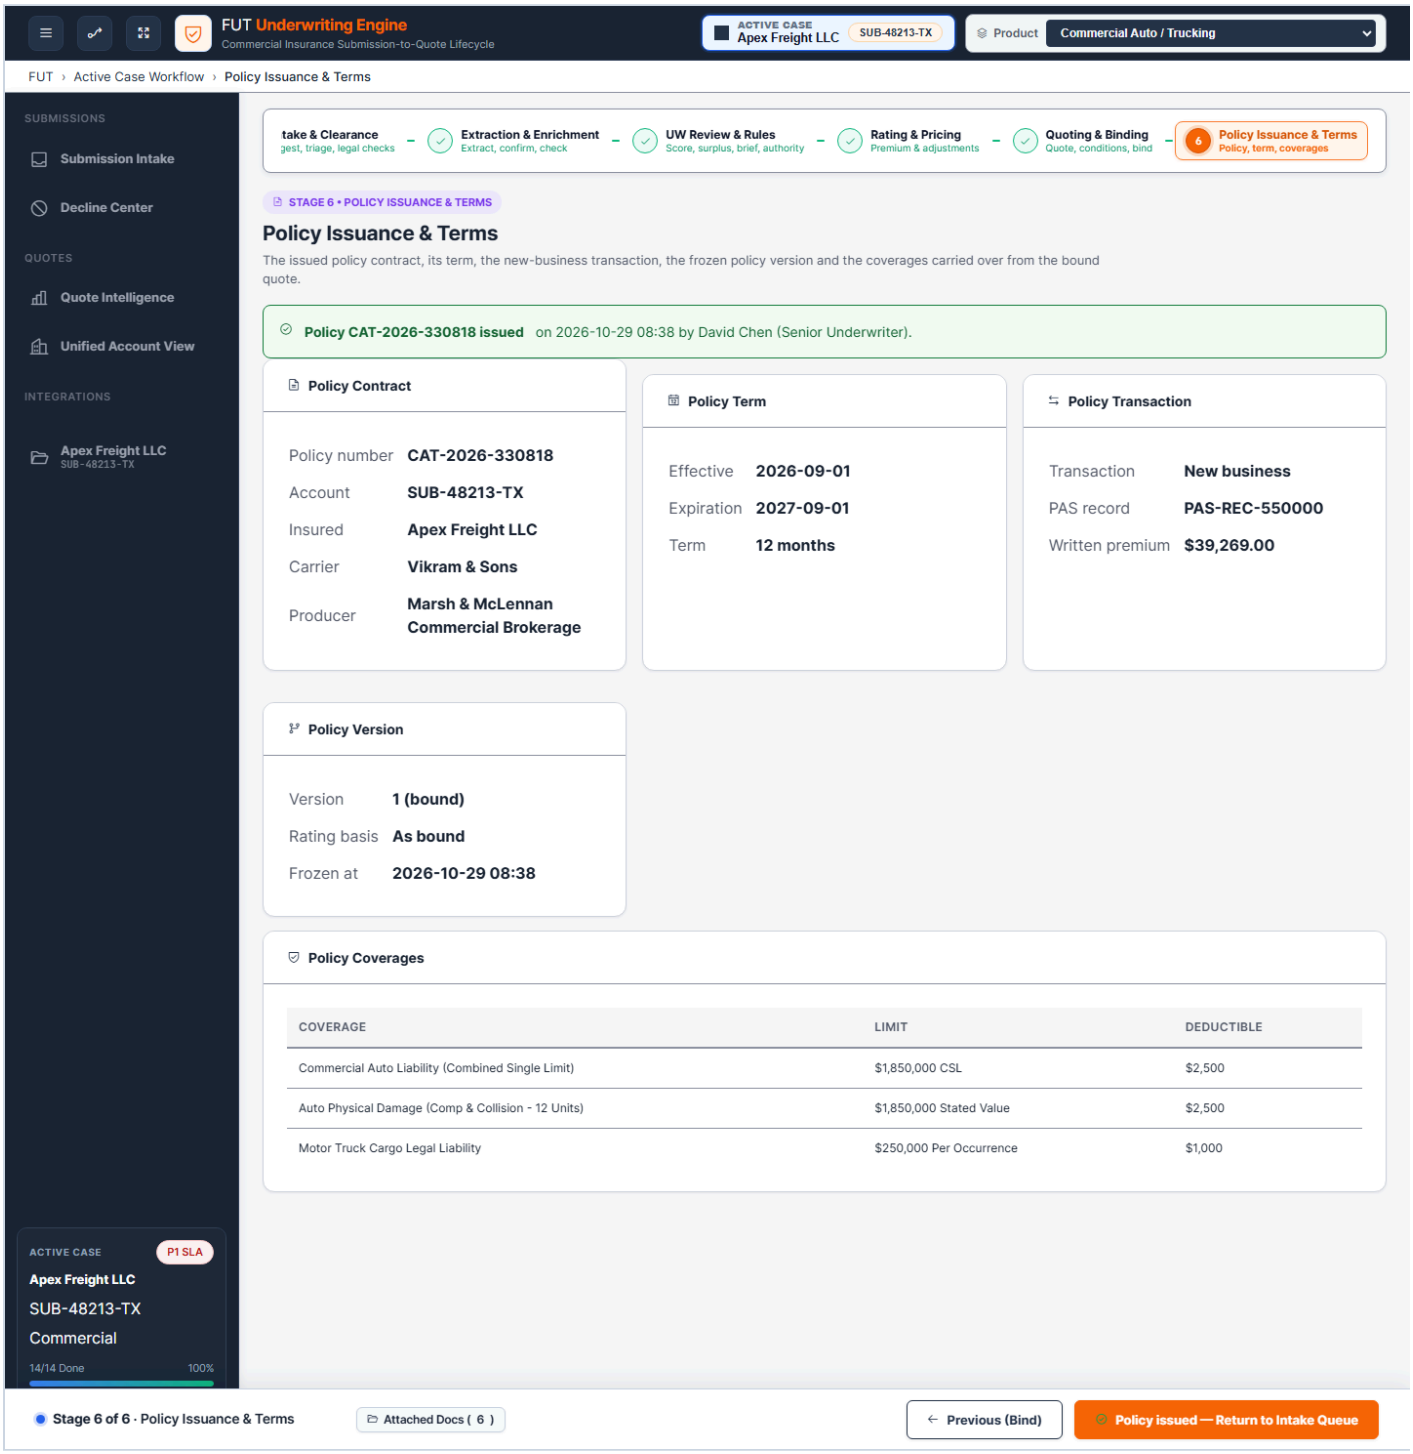

3. THE CASE WORKFLOW: 6 STAGES, 14 STEPS

Step 14: Policy Issuance & Terms

> Step 14 (Stage 6): Policy Issuance & Terms, the last step. It opens only once the policy is bound. Cards show the policy contract (policy number, account, insured, carrier, producer), the term (effective and expiry dates), the transaction (new business, PAS record, written premium), the frozen policy version and the coverages carried over from the bound quote with limits and deductibles.

- The bottom bar now reads "Policy issued, Return to Intake Queue": the case is complete.
- After this point changes are made as endorsements, cancellations or reinstatements under Policy Changes.

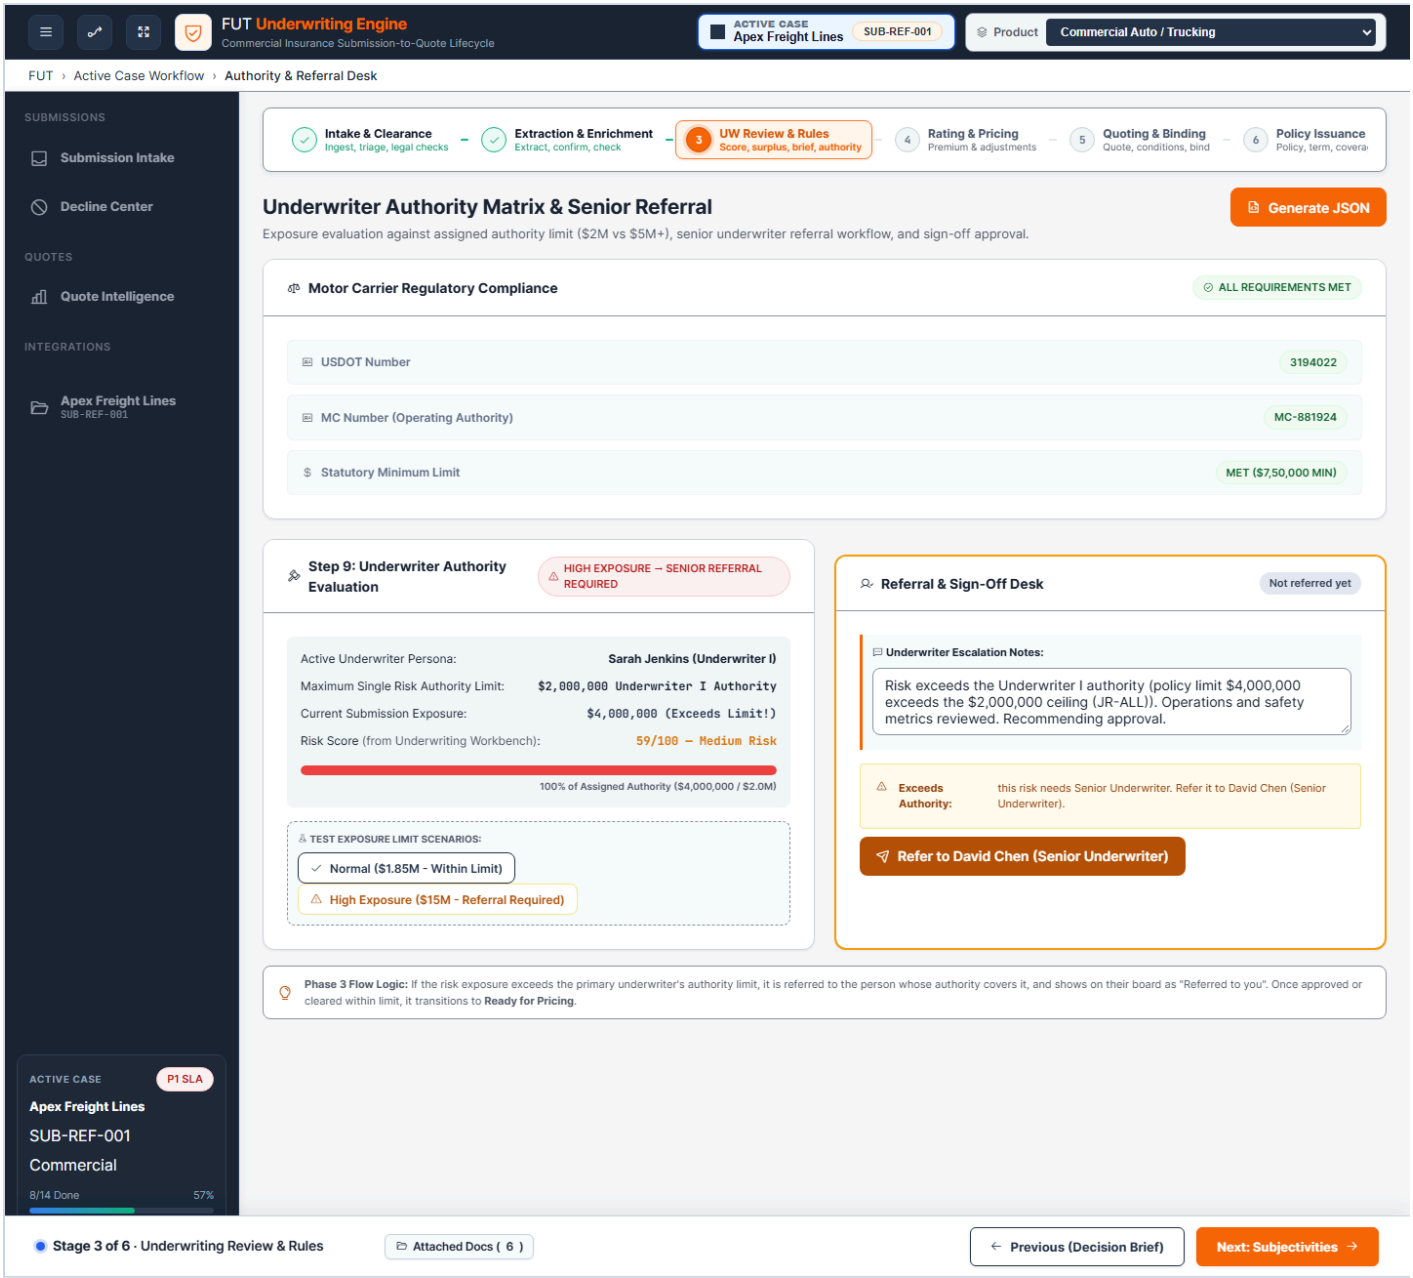

4. REFERRALS BETWEEN UNDERWRITERS

Referral: who the risk goes to

> A referral begins. Sarah Jenkins (Underwriter I, $2M authority) has a risk with $4,000,000 exposure. The desk says the risk exceeds her authority and needs a Senior Underwriter, and the button names the person it will go to: "Refer to David Chen (Senior Underwriter)". The note box is already filled with the real reason from the case (the policy limit against the ceiling) and can be edited.

- The button names the first person whose authority covers the risk. A risk above every internal level reads "Refer to the carrier".
- The note must be at least 10 characters. The badge says "Not referred yet".

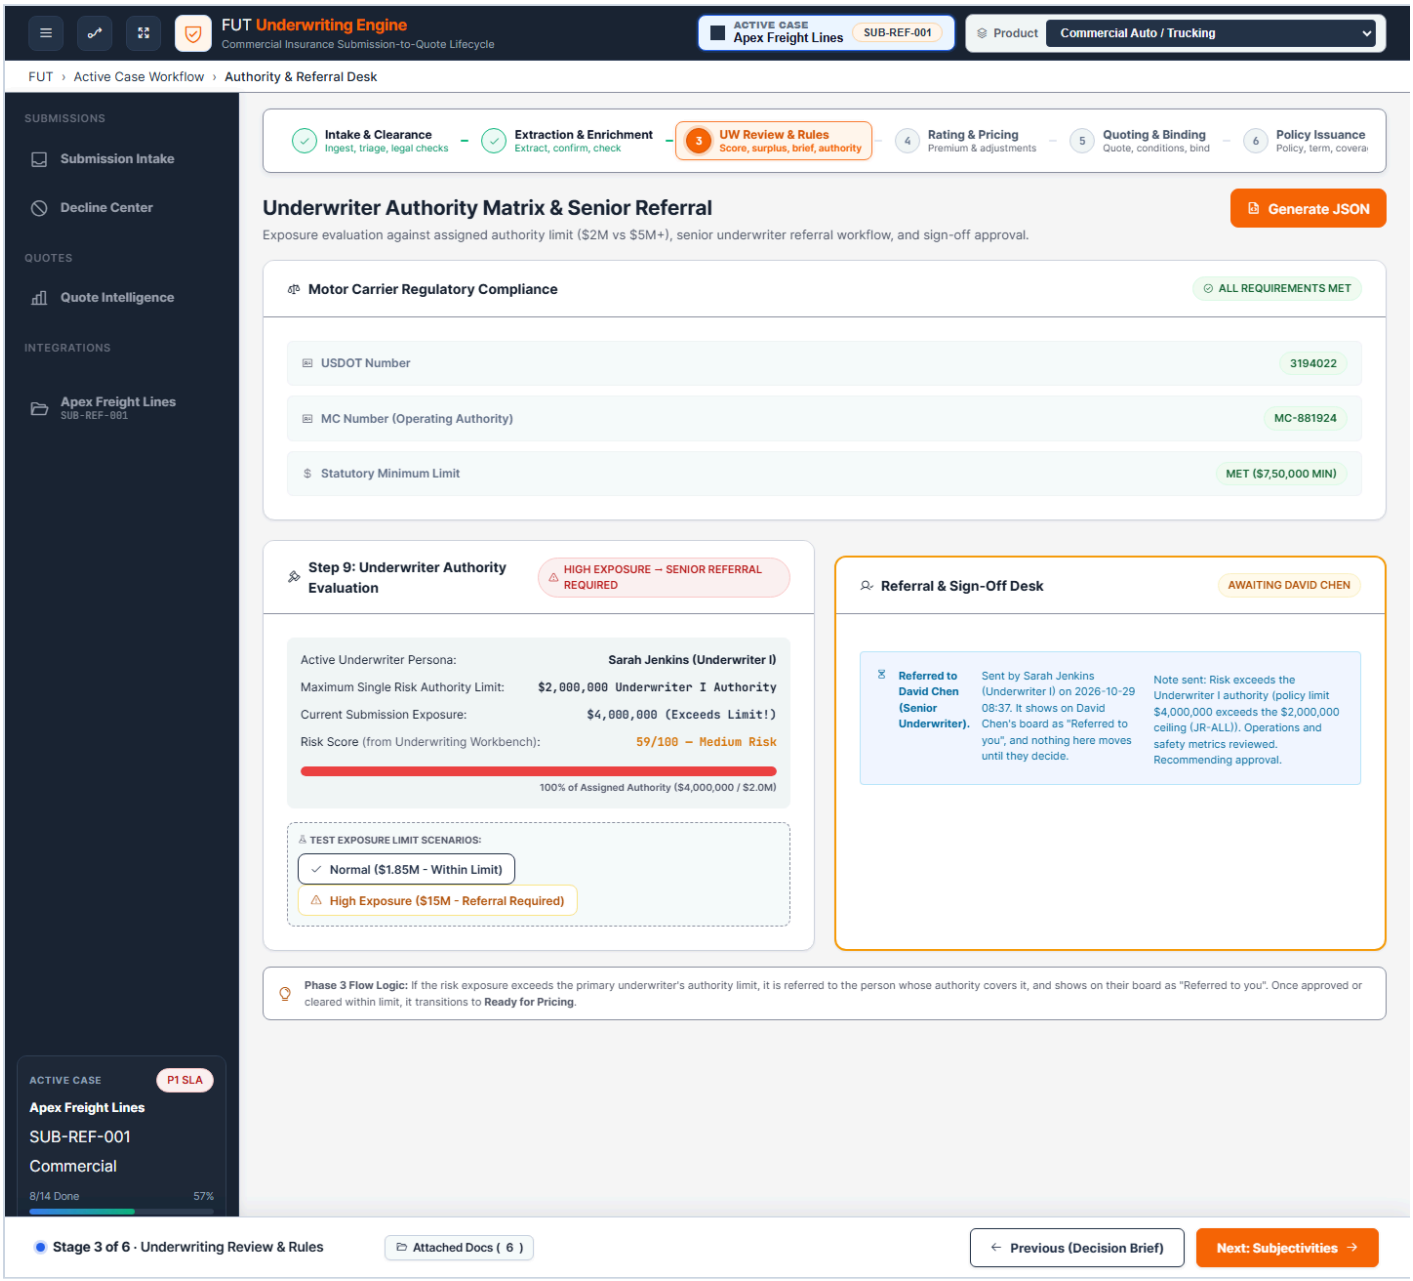

4. REFERRALS BETWEEN UNDERWRITERS

Referral: sent, "Awaiting David Chen"

> After the button is pressed: one tracked referral exists. The desk says "Referred to David Chen (Senior Underwriter)", who sent it and when, and that it shows on David Chen's board as "Referred to you". The badge reads "Awaiting David Chen" and nothing on the case moves until he decides. In the queue the case's status reads "Referral, awaiting David Chen".

- A second referral cannot be sent while one is waiting.

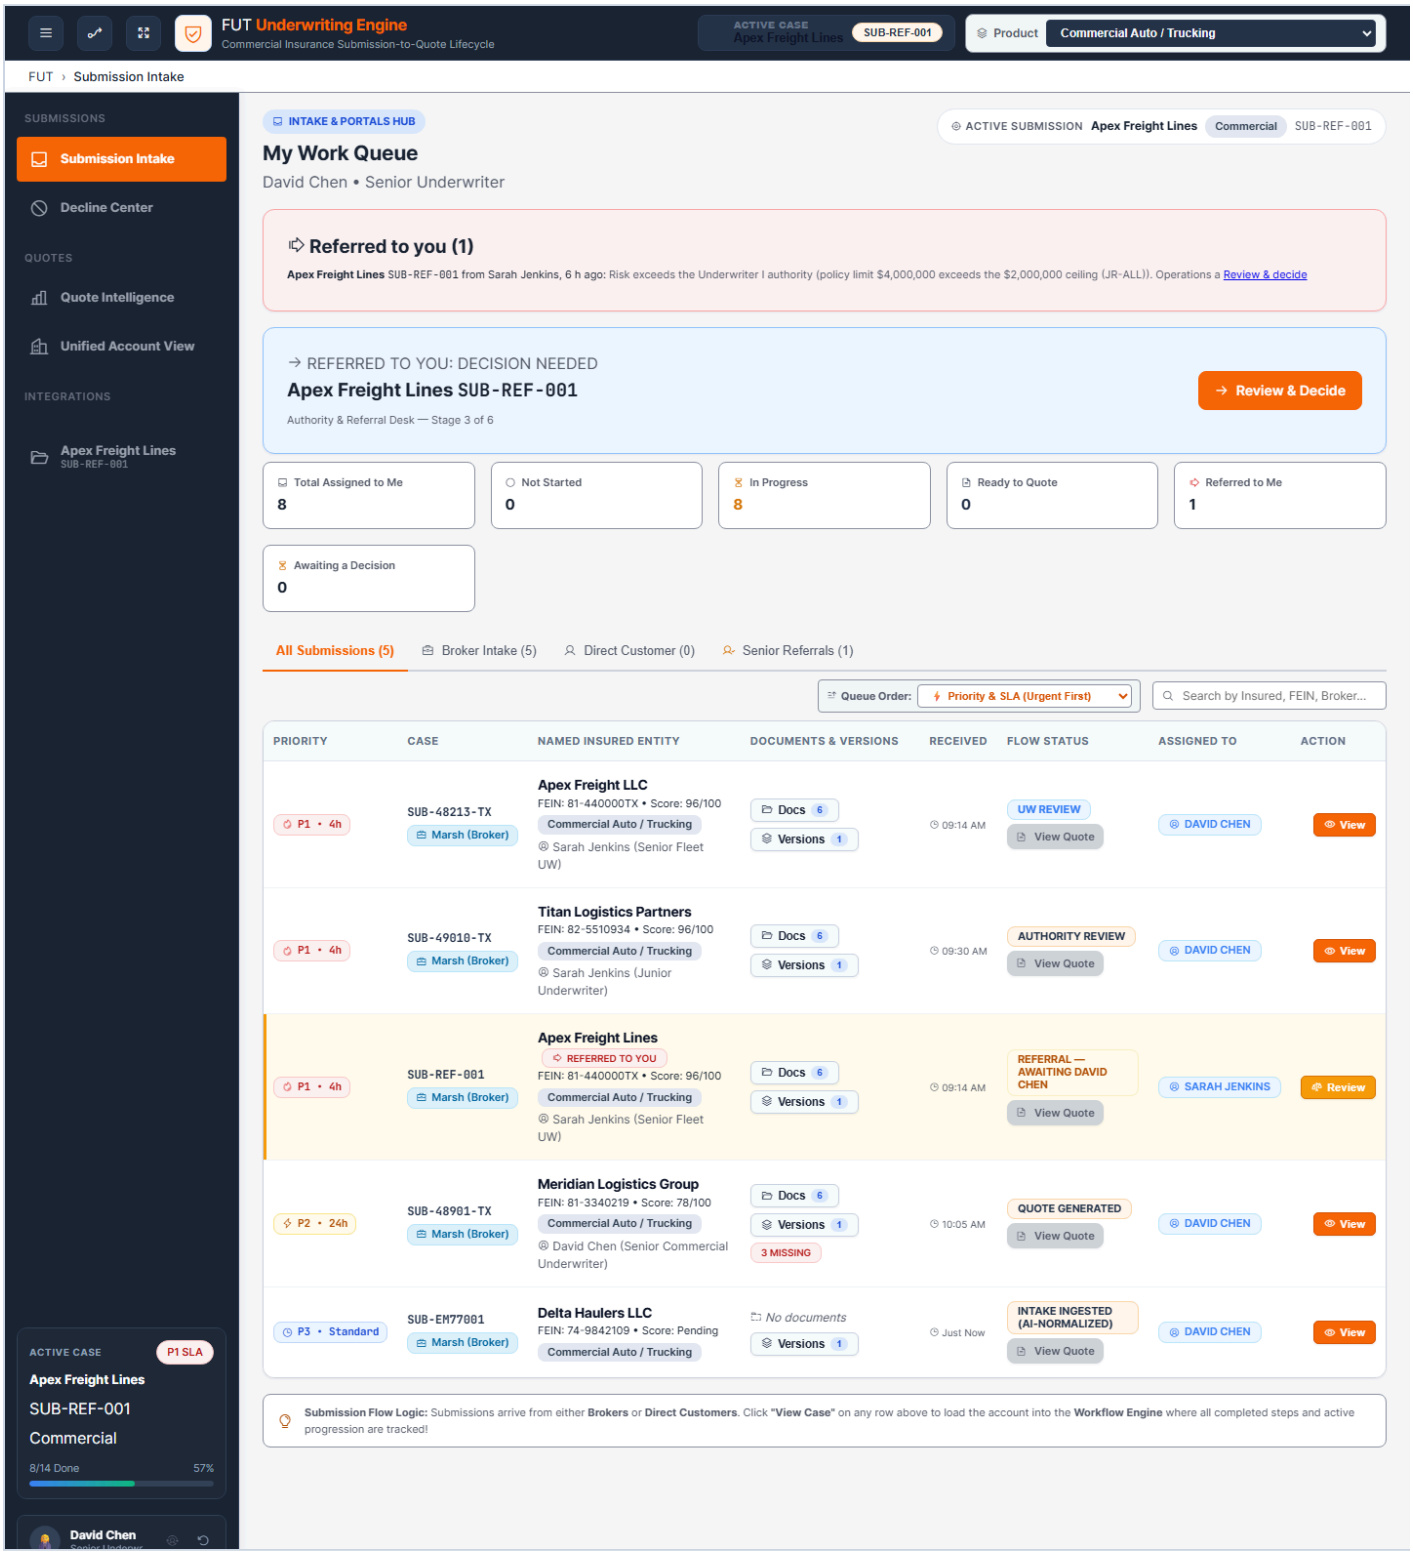

4. REFERRALS BETWEEN UNDERWRITERS

Referral: "Referred to you" on the receiver's board

> David Chen's board after signing in. A red "Referred to you (1)" card names the case, who sent it, how long ago and why, with a Review & Decide link. The next-action card now reads "Referred to you: decision needed" with a Review & Decide button. The counters show Referred to Me 1, and the case's row carries a "Referred to you" badge.

- Someone the referral was not sent to (for example the CUO) sees nothing.
- Sarah Jenkins' own board counts the case under "Awaiting a Decision".

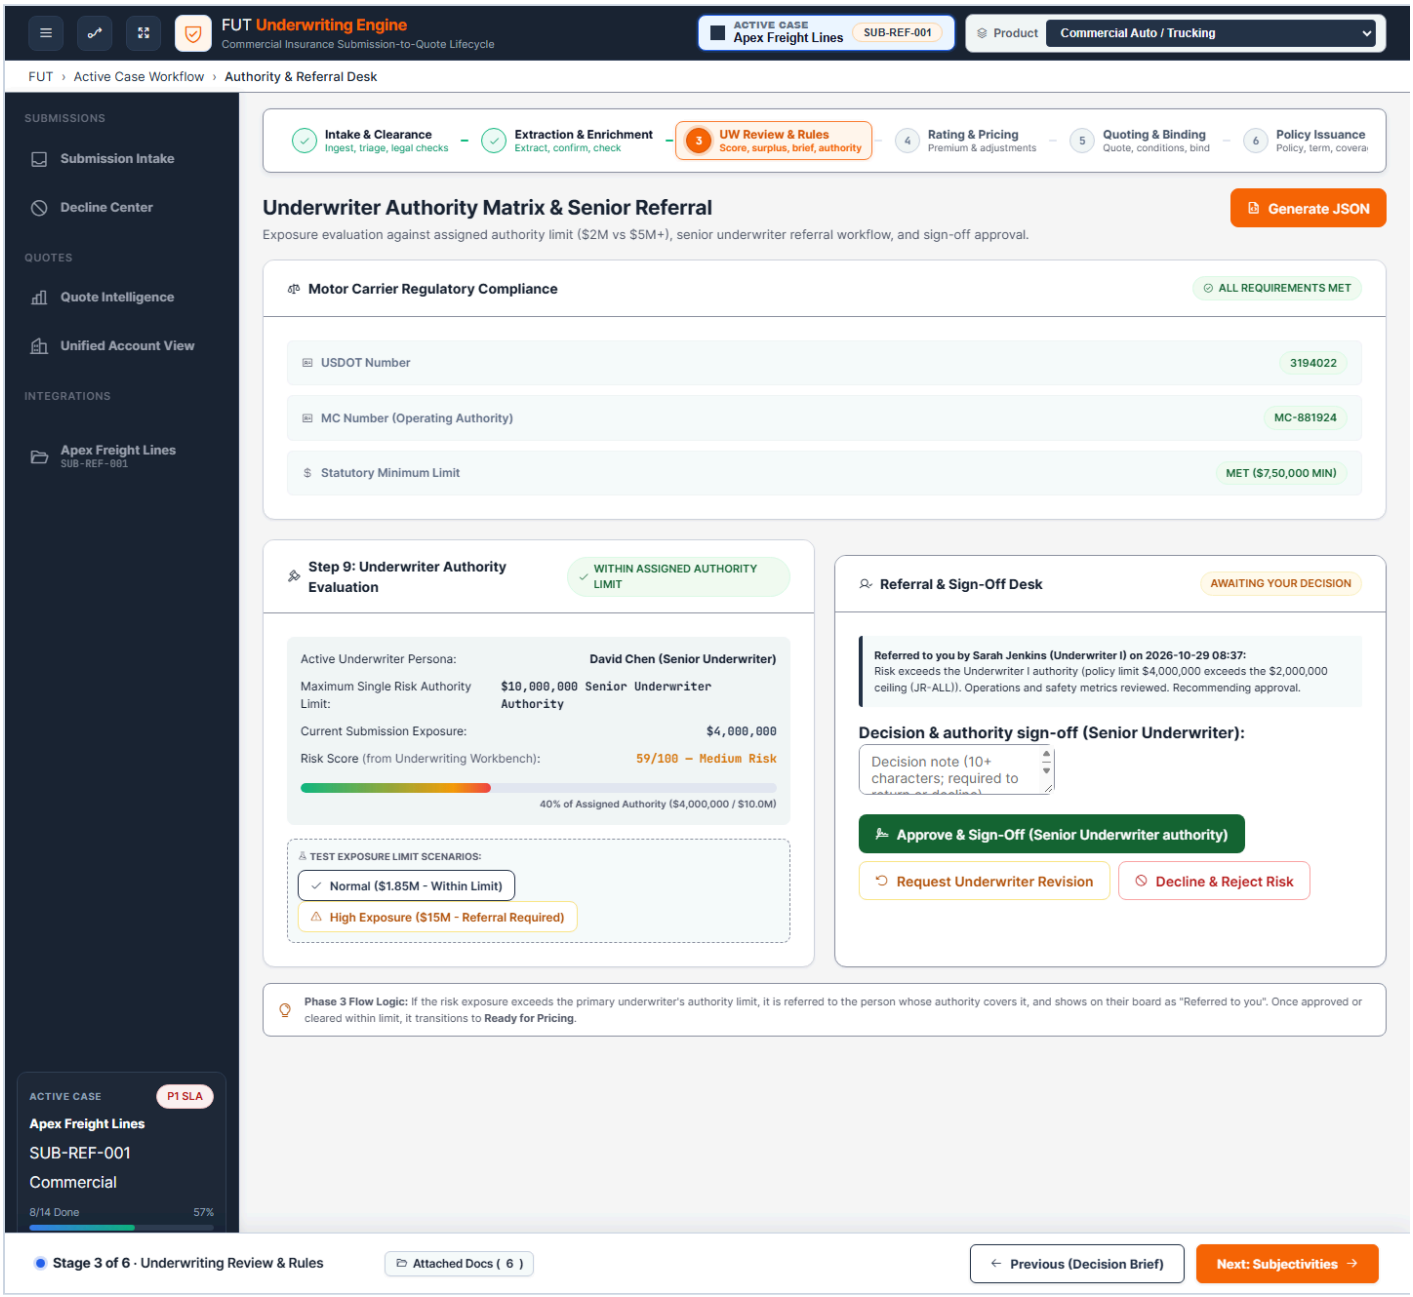

4. REFERRALS BETWEEN UNDERWRITERS

Referral: the receiver decides

> The same desk, opened by David Chen. The panel now shows who referred it and the note, a decision note box, and three buttons: Approve & Sign-Off (named for his authority), Request Underwriter Revision and Decline & Reject Risk. The badge reads "Awaiting your decision".

- Only someone whose authority covers the risk, and who did not prepare it, can approve. Returning or declining needs a reason of at least 10 characters.
- Approval sets the case to "Ready for Rating". A return sends it back to the sender with the reason. A decline stops the quote; to close the case use Decline / Withdraw.

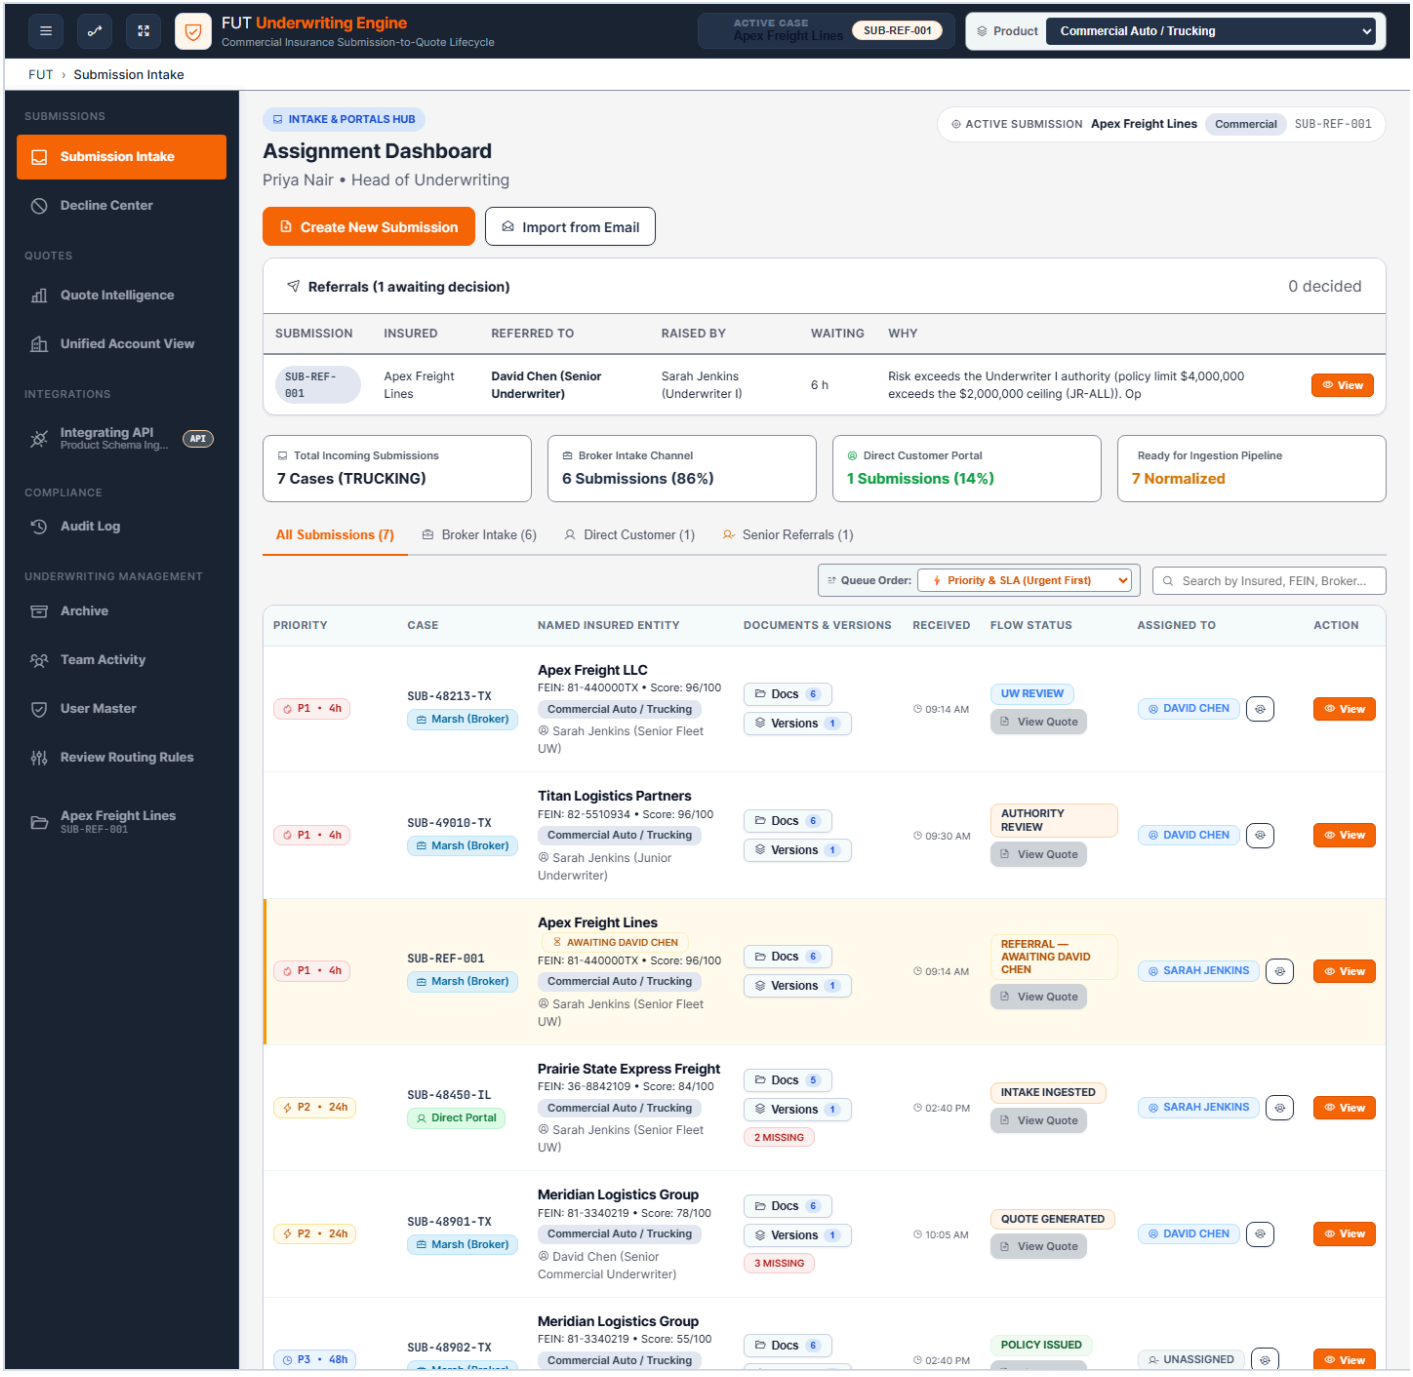

4. REFERRALS BETWEEN UNDERWRITERS

Referral: the Head of Underwriting's list

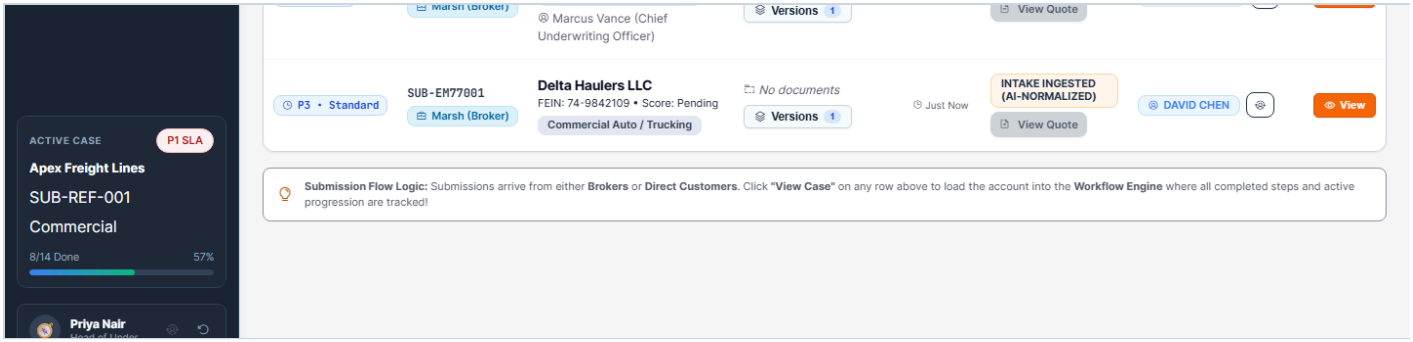

> The Head of Underwriting's Assignment Dashboard with a "Referrals (1 awaiting decision)" table above the tiles: submission, insured, who it is referred to, who raised it, how long it has been waiting, why, and a View button. A counter shows how many have been decided.

- The queue row for the case reads "Awaiting David Chen" in its badge and "Referral, awaiting David Chen" in its status.

Submission Flow Logic: Submissions arrive from either Brokers or Direct Customers. Click "View Case" on any row above to load the account into the Workflow Engine where all completed steps and active progression are tracked!

5. EXITS: DECLINE CENTER

Decline Center

> Decline Center: where every submission that stops early is logged. Four exit-path cards count the records: 1 Duplicate FEIN (found at Clearance), 2 Appetite Knockout (at the Workbench), 3 Senior UW Decline (at the Authority Desk) and 4 Withdrawn / Not Taken (the broker or insured withdrew, or a quote was issued and not accepted). Path 4 is counted apart from declines so that the decline ratio only counts the carrier's own refusals. The table below lists each closed submission with the exit point, reason, time and retention note.

- Nothing has been closed yet in this view, so the table says "No declined or terminated submissions logged yet".

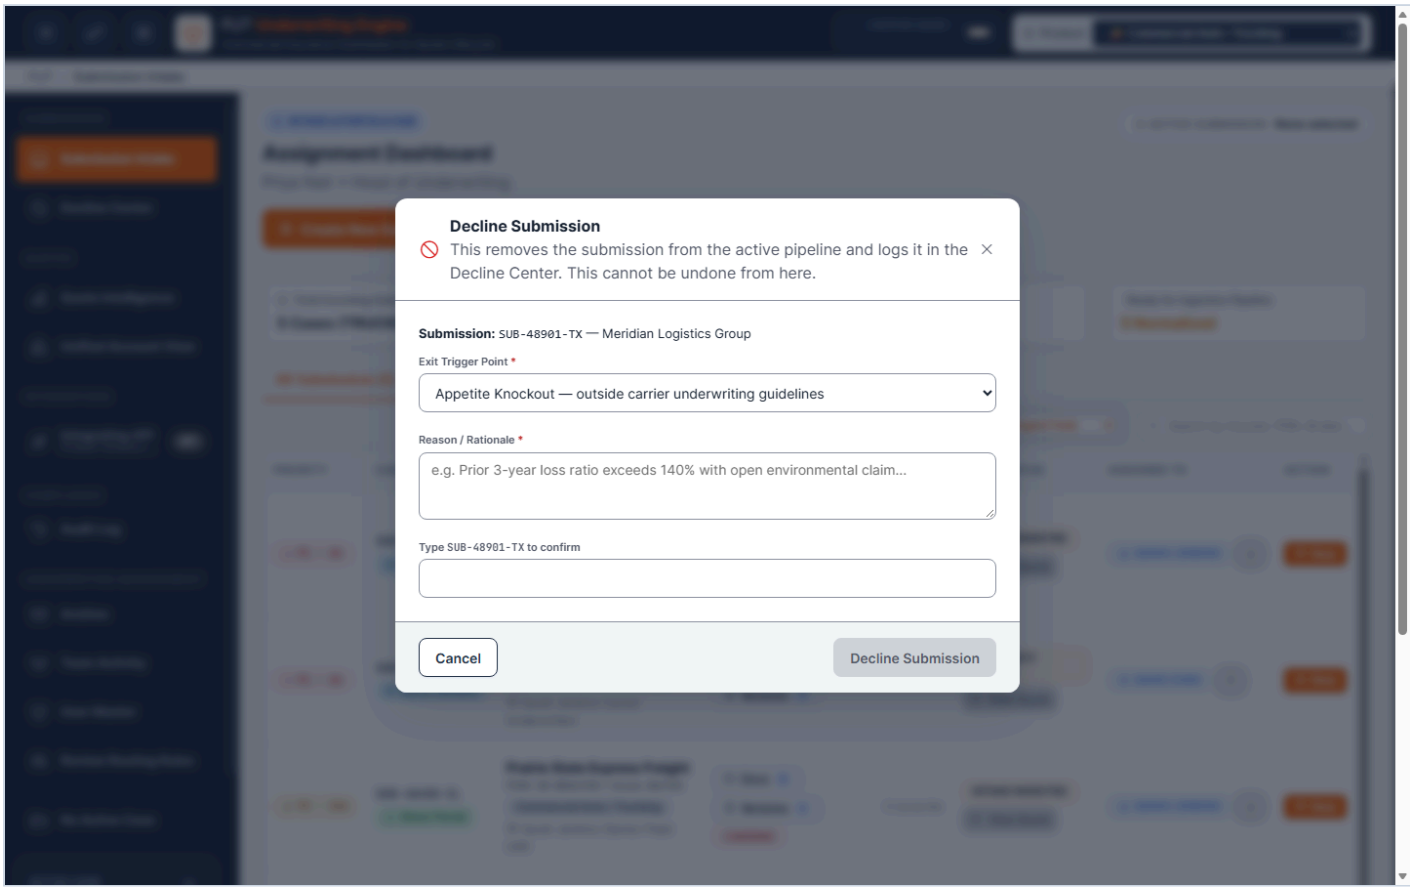

5. EXITS: DECLINE CENTER

Close Submission pop-up

> "Close Submission: Decline, Withdrawn or Not Taken", the pop-up behind the Decline / Withdraw button. The user picks the exit trigger point from a list (appetite knockout, duplicate FEIN, senior decline, withdrawn by broker, quote not taken and so on), writes the reason, and must type the submission id to confirm. The case then leaves the active pipeline and is logged in the Decline Center.

- "Quote Not Taken" is only accepted when a quote has actually been issued.
- Closing a case cannot be undone from this screen.

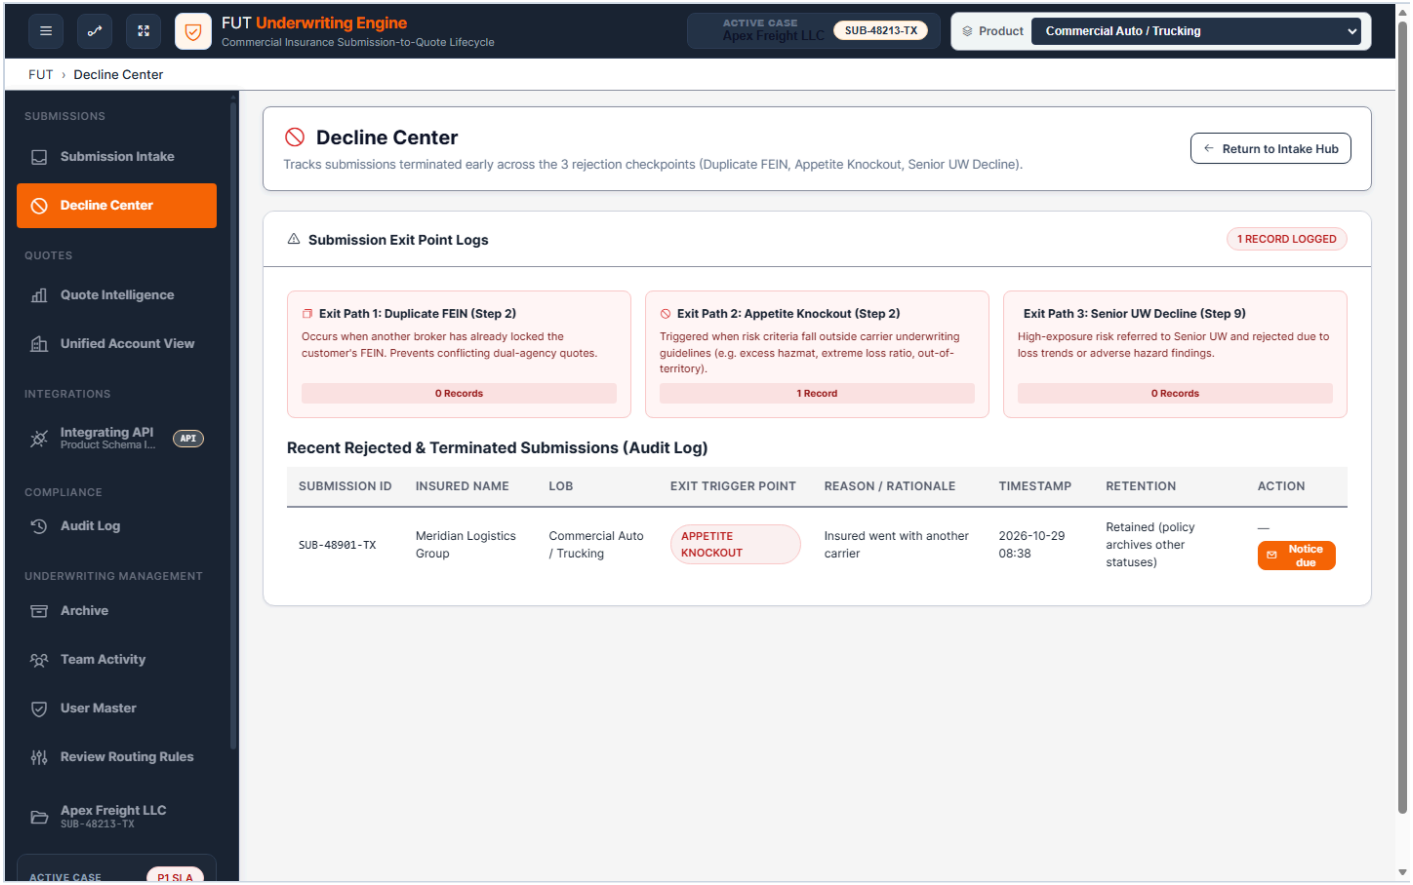

5. EXITS: DECLINE CENTER

Decline Center with an exit recorded

> The Decline Center after one exit has been recorded: a quote that was issued and "Not Taken" (reason: the insured went with another carrier). Exit Path 4 now reads "0 withdrawn, 1 not taken", and the table shows the case, its trigger, the reason and time, the retention note, and a "Notice due" button.

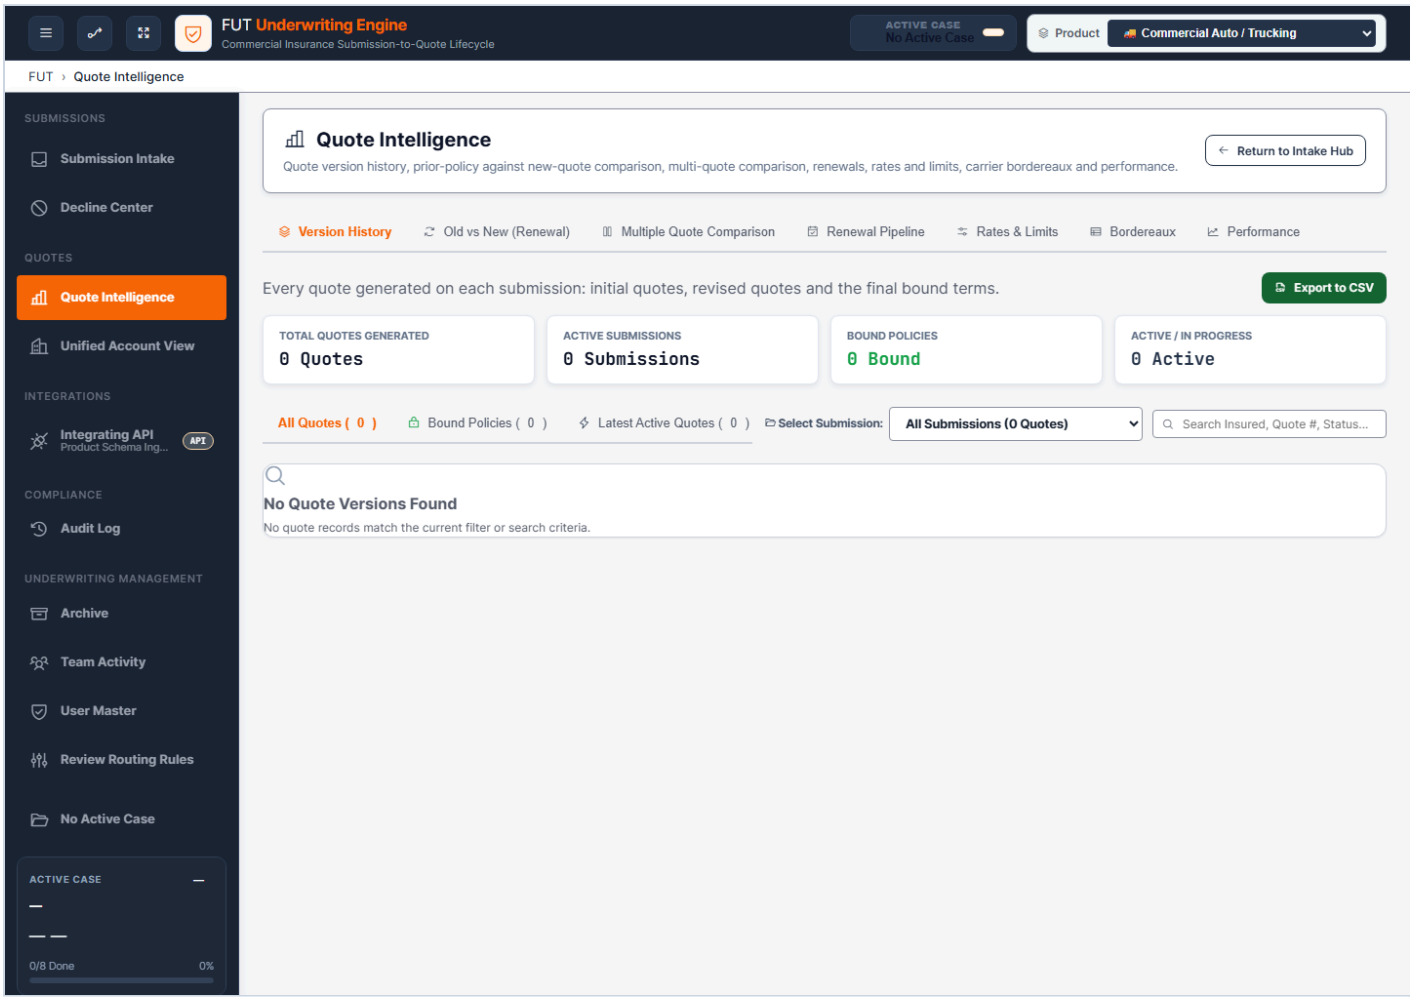

- "Notice due" opens the Notice Studio to prepare the declination notice to the insured.

6. QUOTE INTELLIGENCE

Quote Intelligence: Version History

> Quote Intelligence, tab 1 of 7: Version History. Every quote generated on every submission (initial, revised and final bound terms) is listed here, with tiles for total quotes, active submissions, bound policies and in-progress quotes, filters (All quotes, Bound policies, Latest active quotes), a submission picker, a search box and Export to CSV. At this point no quote has been generated, so it says "No Quote Versions Found".

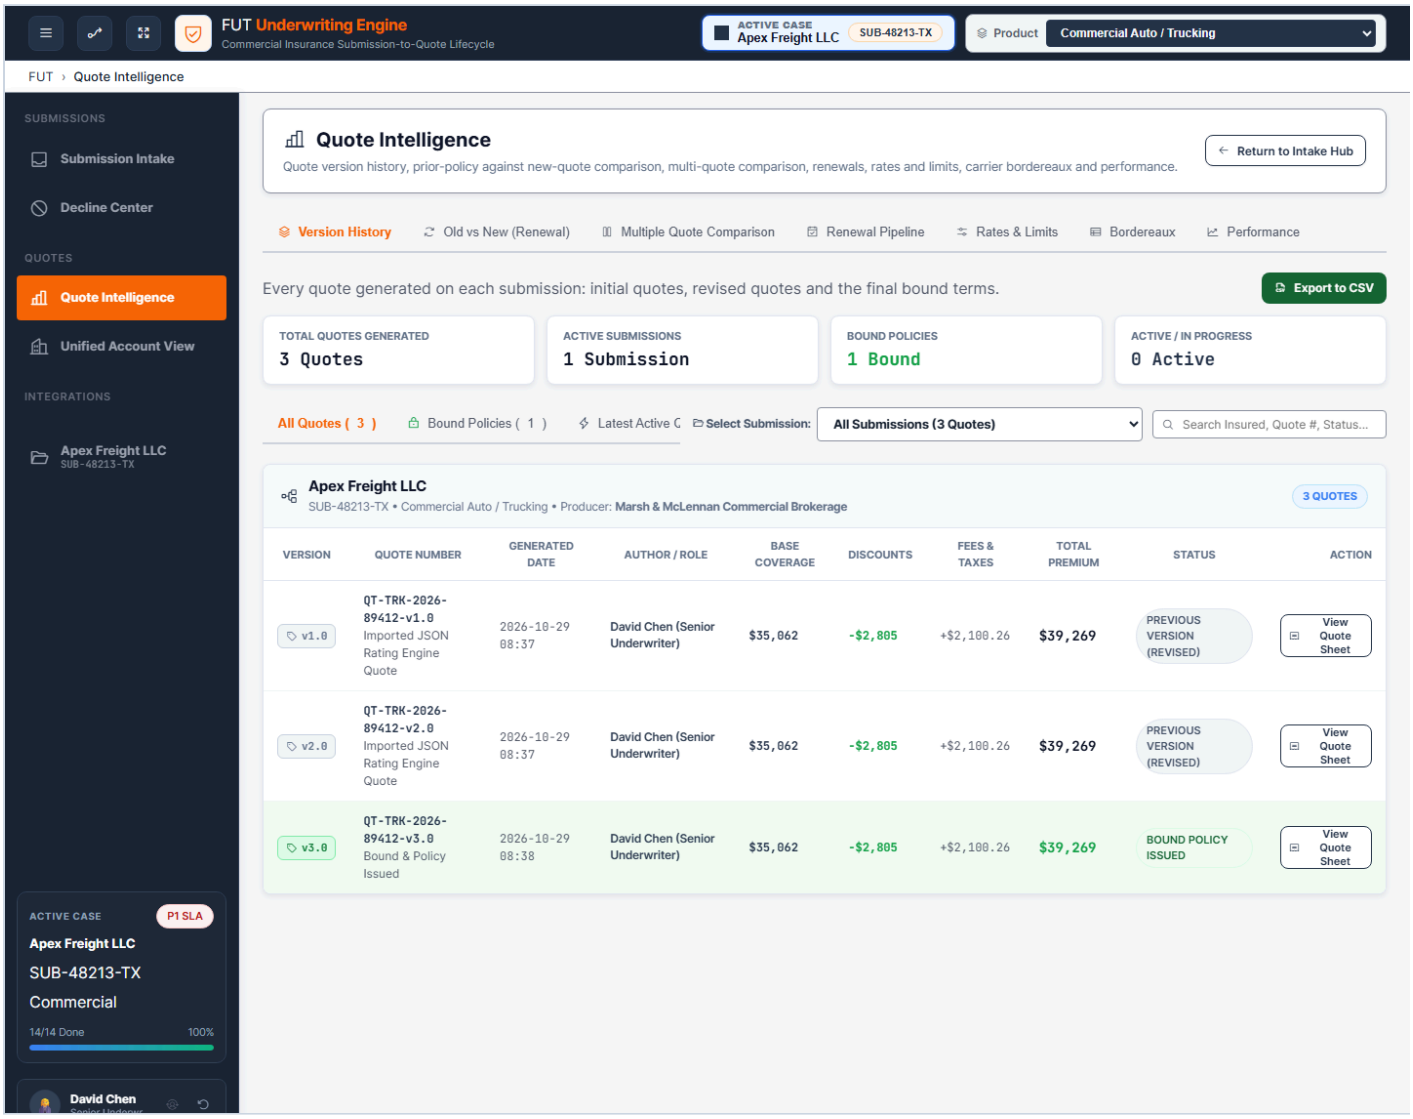

6. QUOTE INTELLIGENCE

Version History after a bound case

> Version History once a case has been rated, issued and bound. The three versions of the Apex Freight quote are listed (v1.0 and v2.0 marked previous, v3.0 "Bound policy issued") with the date, author and role, base coverage ($35,062), discounts (-$2,805), fees and taxes, total premium ($39,269) and a View Quote Sheet button for each.

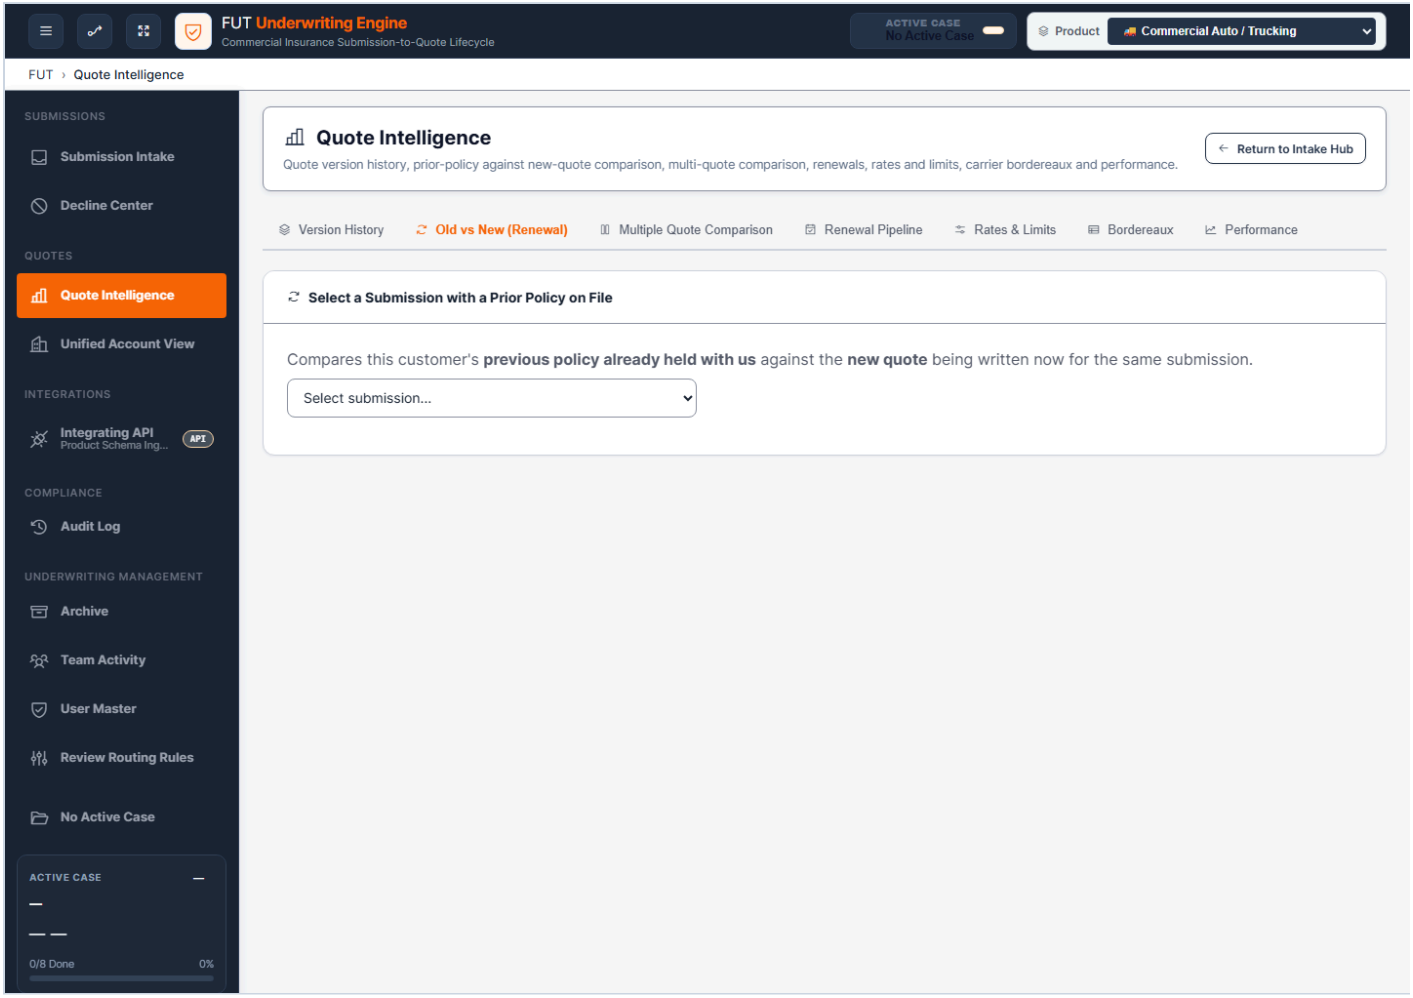

- The tiles at the top now read 3 quotes, 1 submission, 1 bound policy.

6. QUOTE INTELLIGENCE

Quote Intelligence: Old vs New (Renewal)

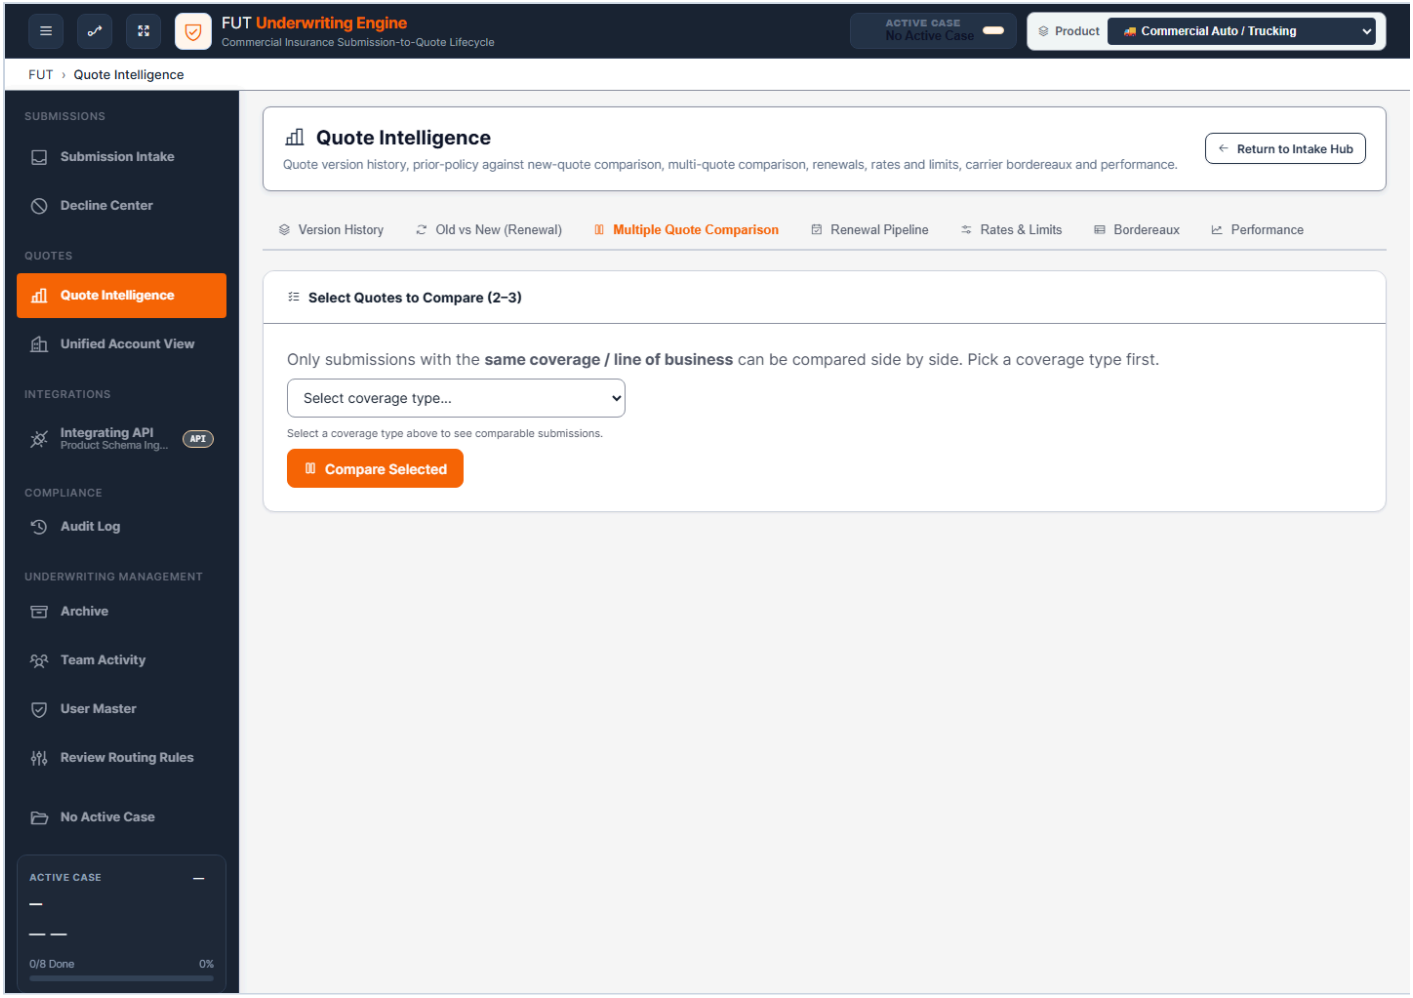

> Tab 2: Old vs New (Renewal). The user picks a submission that has a prior policy on file with the company, and the screen compares that previous policy with the new quote being written for the same customer. No submission with a prior policy exists yet, so the list is empty.

6. QUOTE INTELLIGENCE

Quote Intelligence: Multiple Quote Comparison

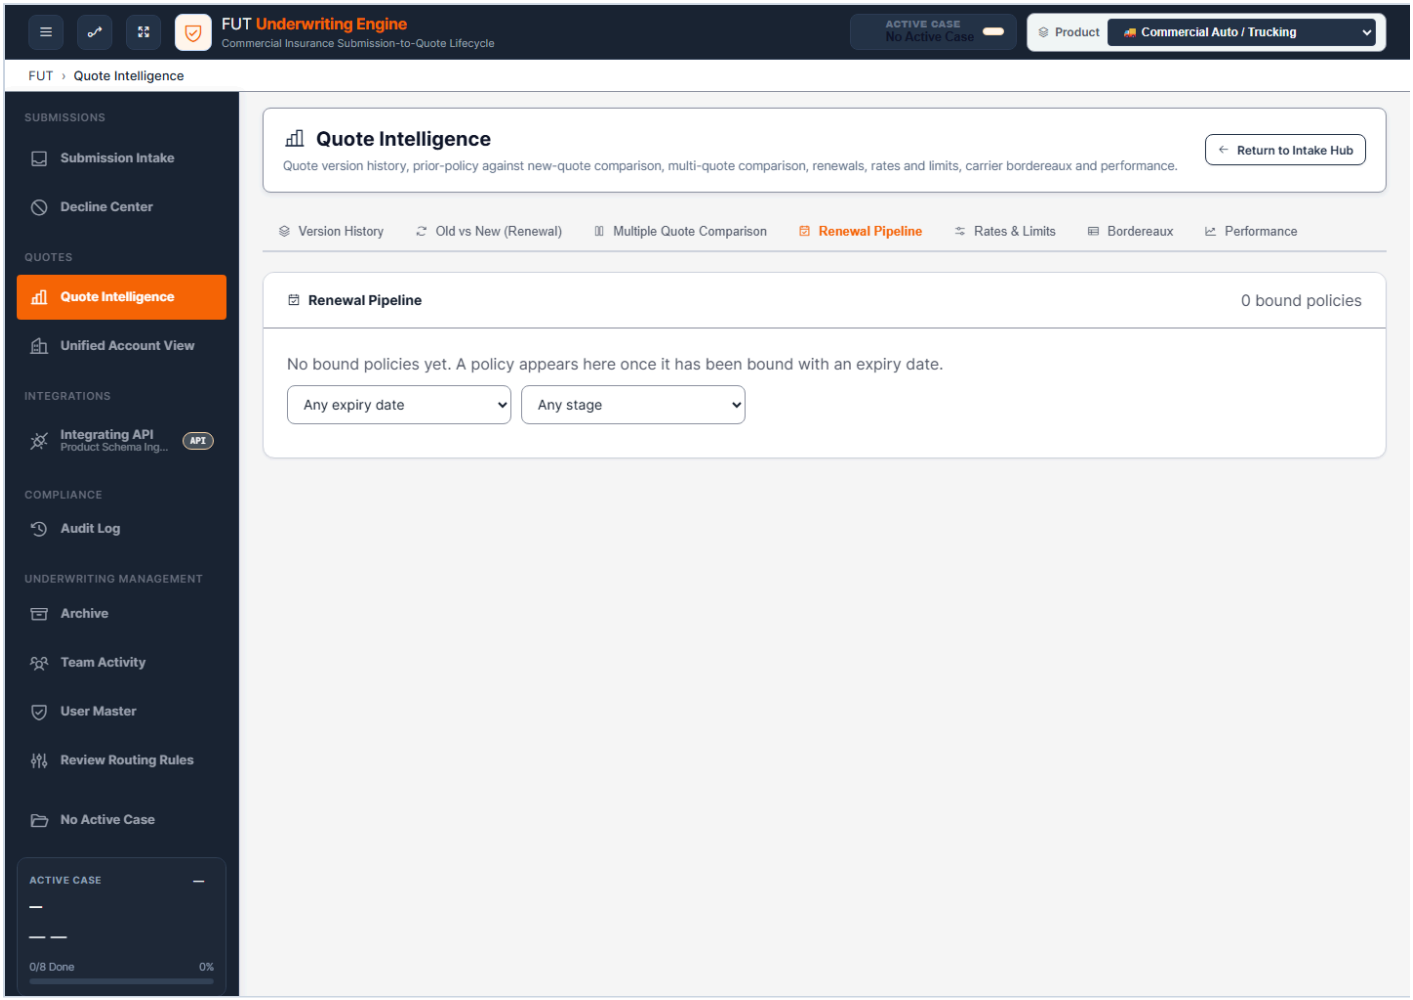

> Tab 3: Multiple Quote Comparison. Only quotes for the same coverage or line of business can be compared side by side, so the user picks a coverage type first, then selects two or three quotes and presses Compare Selected.

6. QUOTE INTELLIGENCE

Quote Intelligence: Renewal Pipeline

> Tab 4: Renewal Pipeline. Lists bound policies by expiry date and stage so that renewals can be planned. It stays empty until a policy has been bound with an expiry date; there are filters for expiry window and stage.

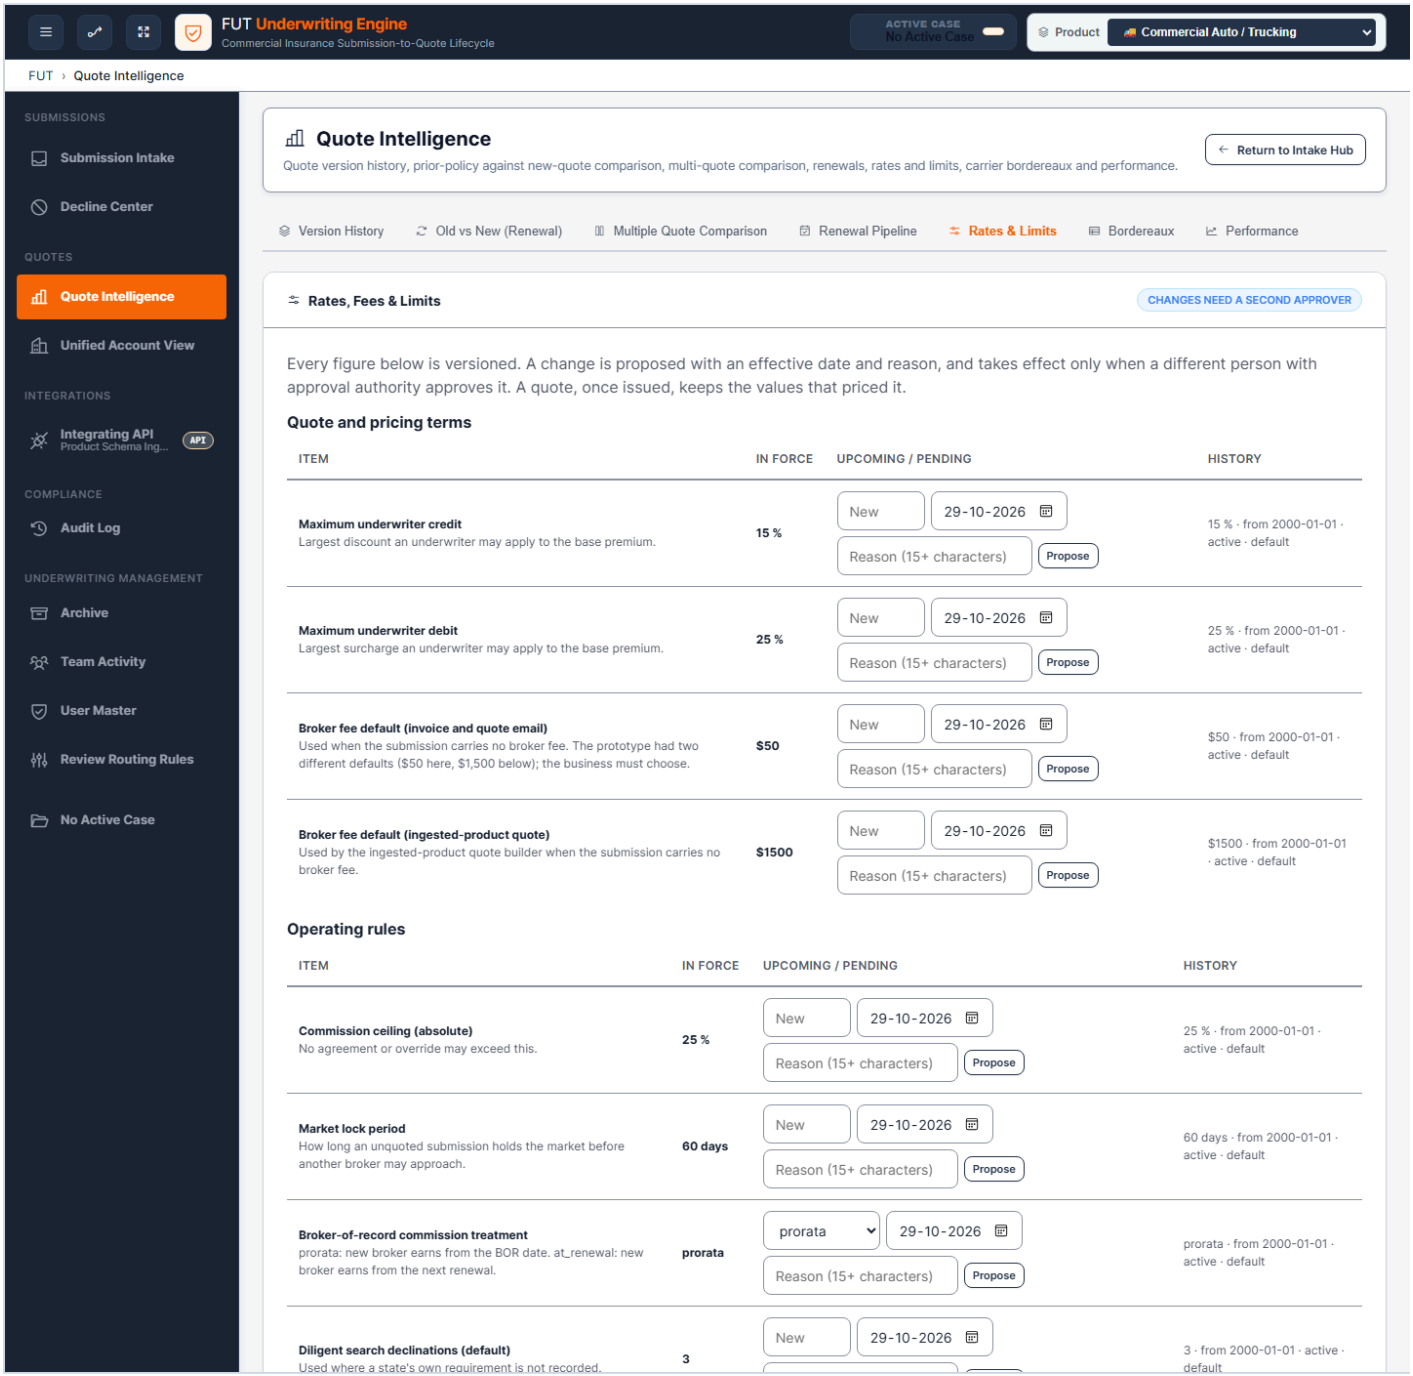

6. QUOTE INTELLIGENCE

Quote Intelligence: Rates & Limits

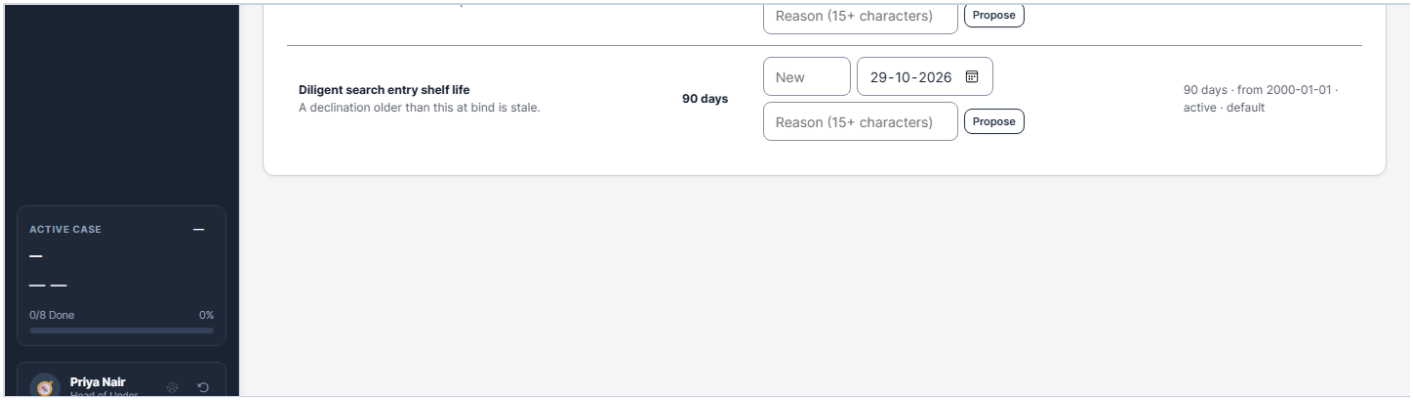

> Tab 5: Rates & Limits, the business's own settings. Every figure is versioned: the table shows the value in force, any pending change, and the history. Quote and pricing terms include the maximum underwriter credit (15%) and debit (25%), the broker fee defaults ($50 on the invoice and quote email, $1,500 on the ingested-product quote) and quote validity (30 days). Operating rules include the commission ceiling (25%) and the market lock period (60 days).

- A change is proposed with a new value, an effective date and a reason of at least 15 characters, and only takes effect when a different person with approval authority approves it. A quote that has been issued keeps the values that priced it.
- The values shown are defaults for the business to confirm; the screen says so.

6. QUOTE INTELLIGENCE

Quote Intelligence: Bordereaux

> Tab 6: Bordereaux. A monthly premium-and-risk report per carrier and period, with the due date (here "Period ended; due 2026-10-15 (past due)"). It lists what is new to report for that carrier and period, and keeps a list of bordereaux already submitted. Submitting needs approval authority.

- Net due to the carrier is gross premium less commission; surplus lines tax and stamping fees are shown for reconciliation only.
- There is no claims bordereau because the prototype holds no claims data.

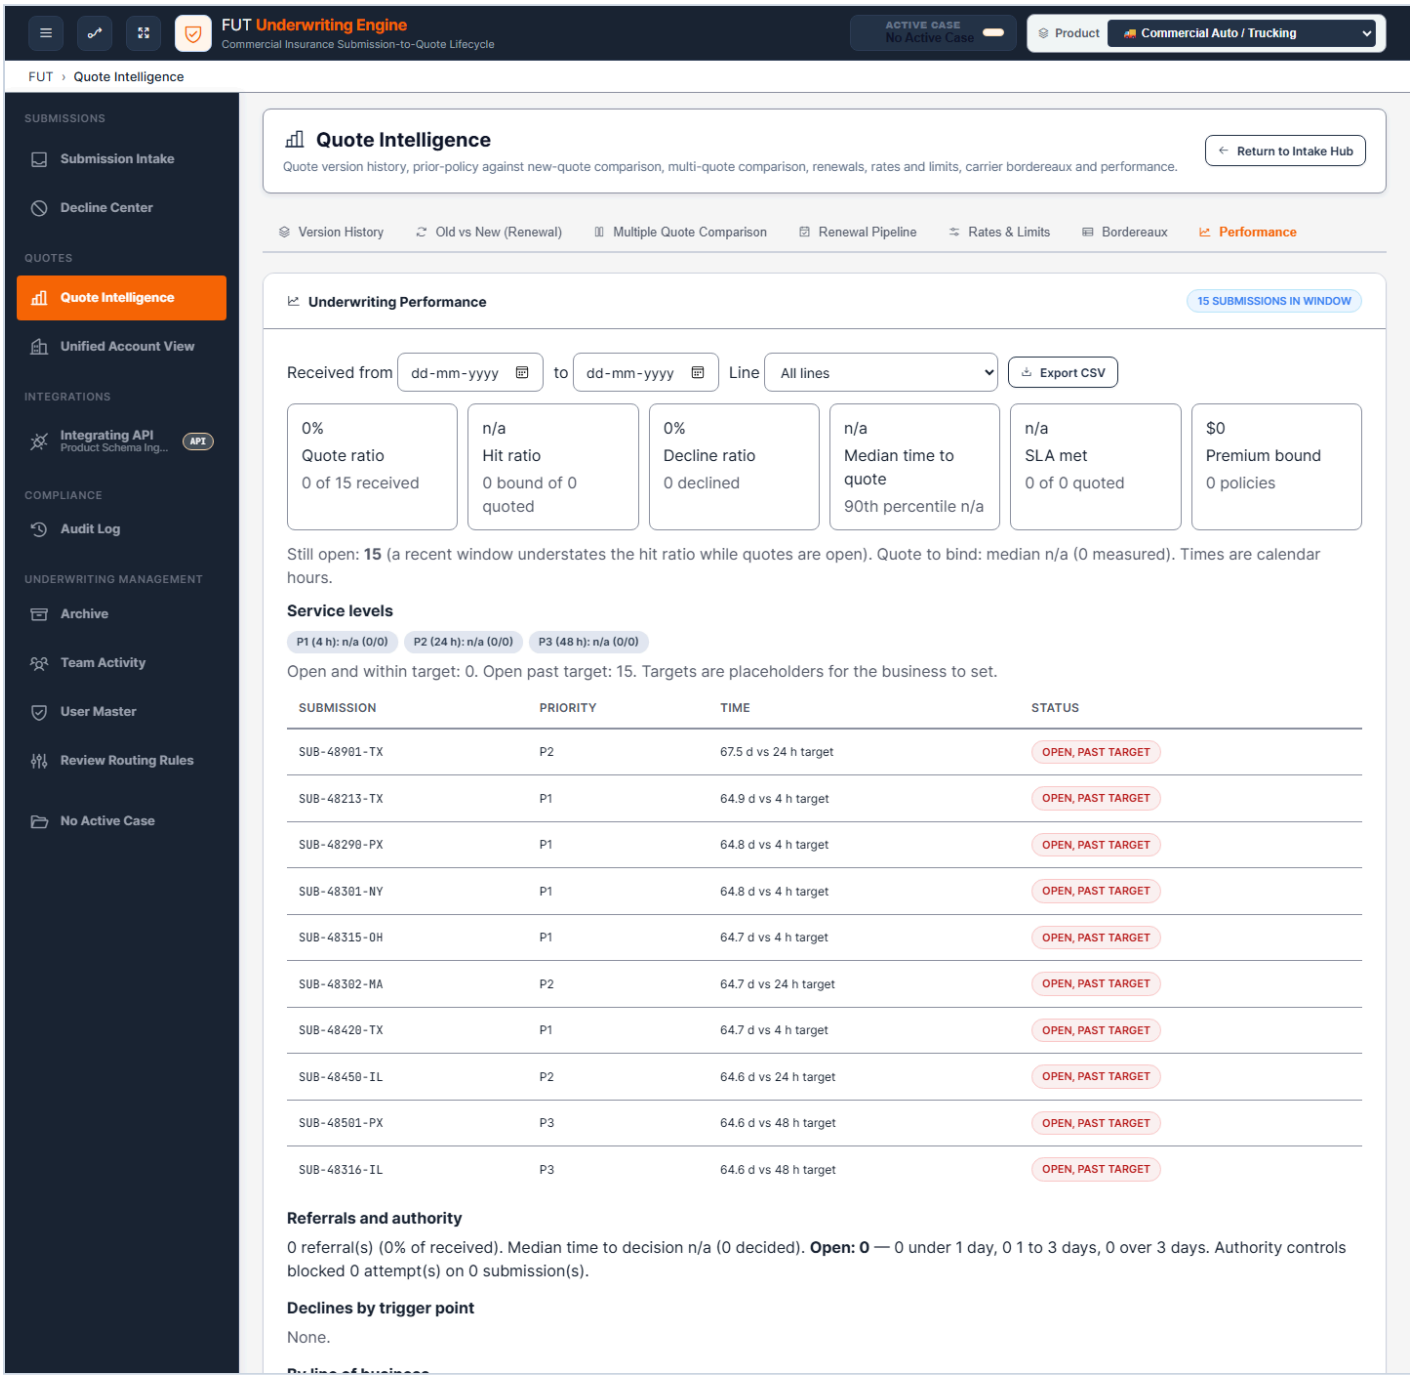

6. QUOTE INTELLIGENCE

Quote Intelligence: Performance

> Tab 7: Performance. Underwriting performance for a chosen date range and line: quote ratio, hit ratio, decline ratio, withdrawn / not taken, median time to quote, SLA met, and premium bound. Below are service levels by priority (P1 4 h, P2 24 h, P3 48 h) and a table of every submission with its time against target. Export CSV downloads it.

- The ratios are calculated from the cases in the system (here 15 received, none quoted yet).
- The target times are placeholders for the business to set.

Part 1 of 2, continued on the next page

Quote Intelligence: Performance (part 2 of 2)

7. UNIFIED ACCOUNT VIEW

Unified Account View

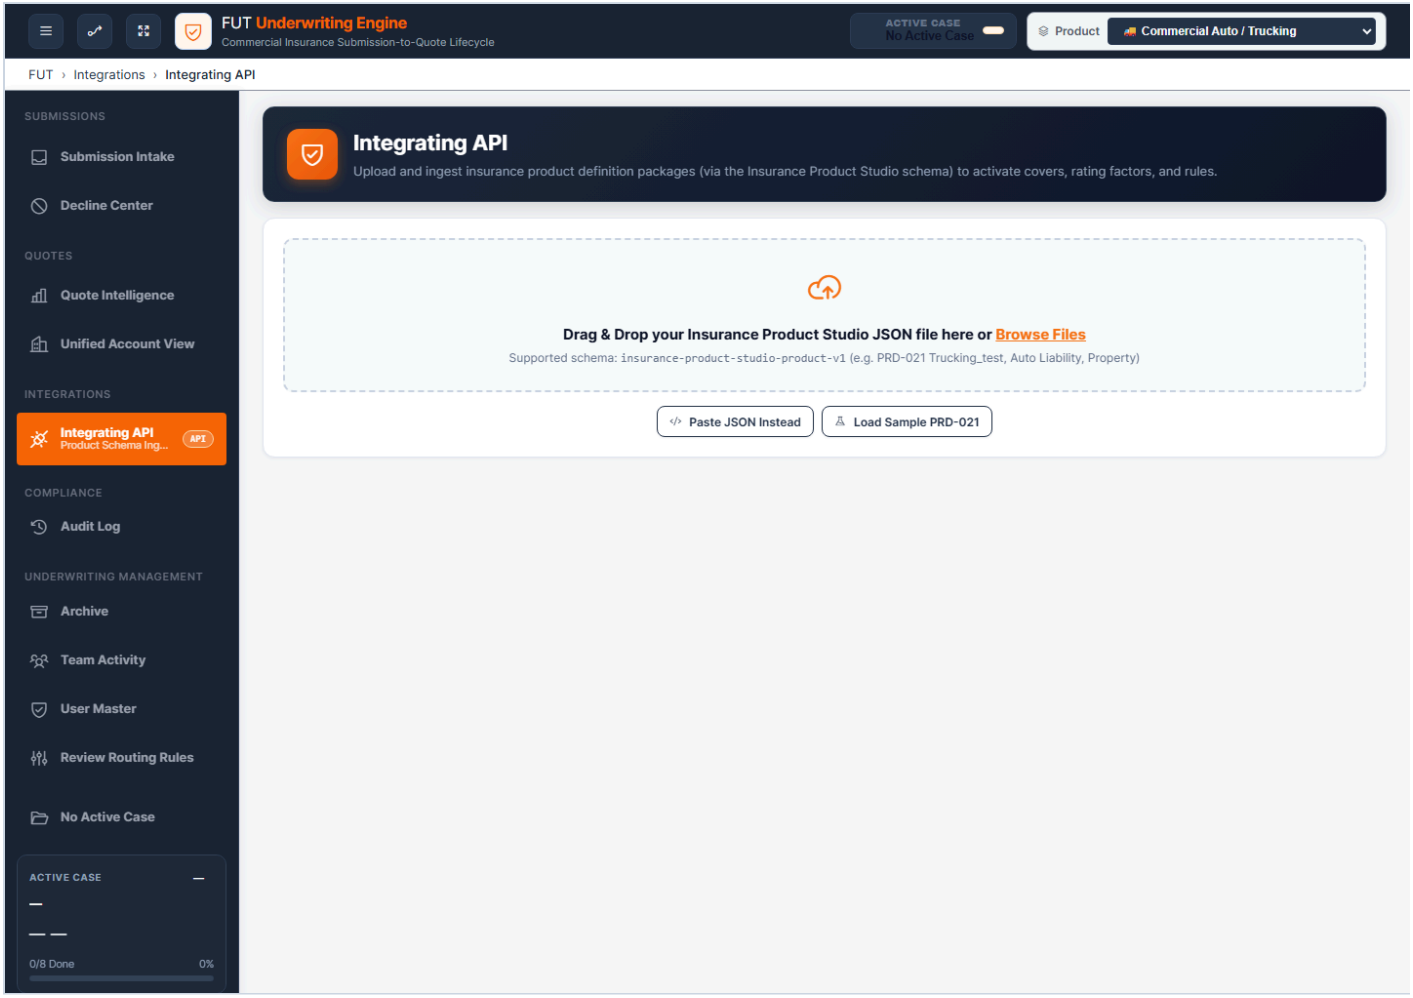

> Unified Account View. The user types a customer or parent-account name and presses Show. If that customer has more than one line of business on file (trucking, property, GL and so on), a single cross-line record appears. This menu entry is hidden from roles without permission to see it (for example the Junior Underwriter).

8. INTEGRATING API (PRODUCT SET-UP)

Integrating API: no product loaded

> Integrating API, with no product loaded. This is where a product definition from the Insurance Product Studio is brought in: drag and drop the JSON file, browse for it, paste JSON, or use Load Sample PRD-021. Only the Head of Underwriting may open it, since the product guidelines are theirs to own.

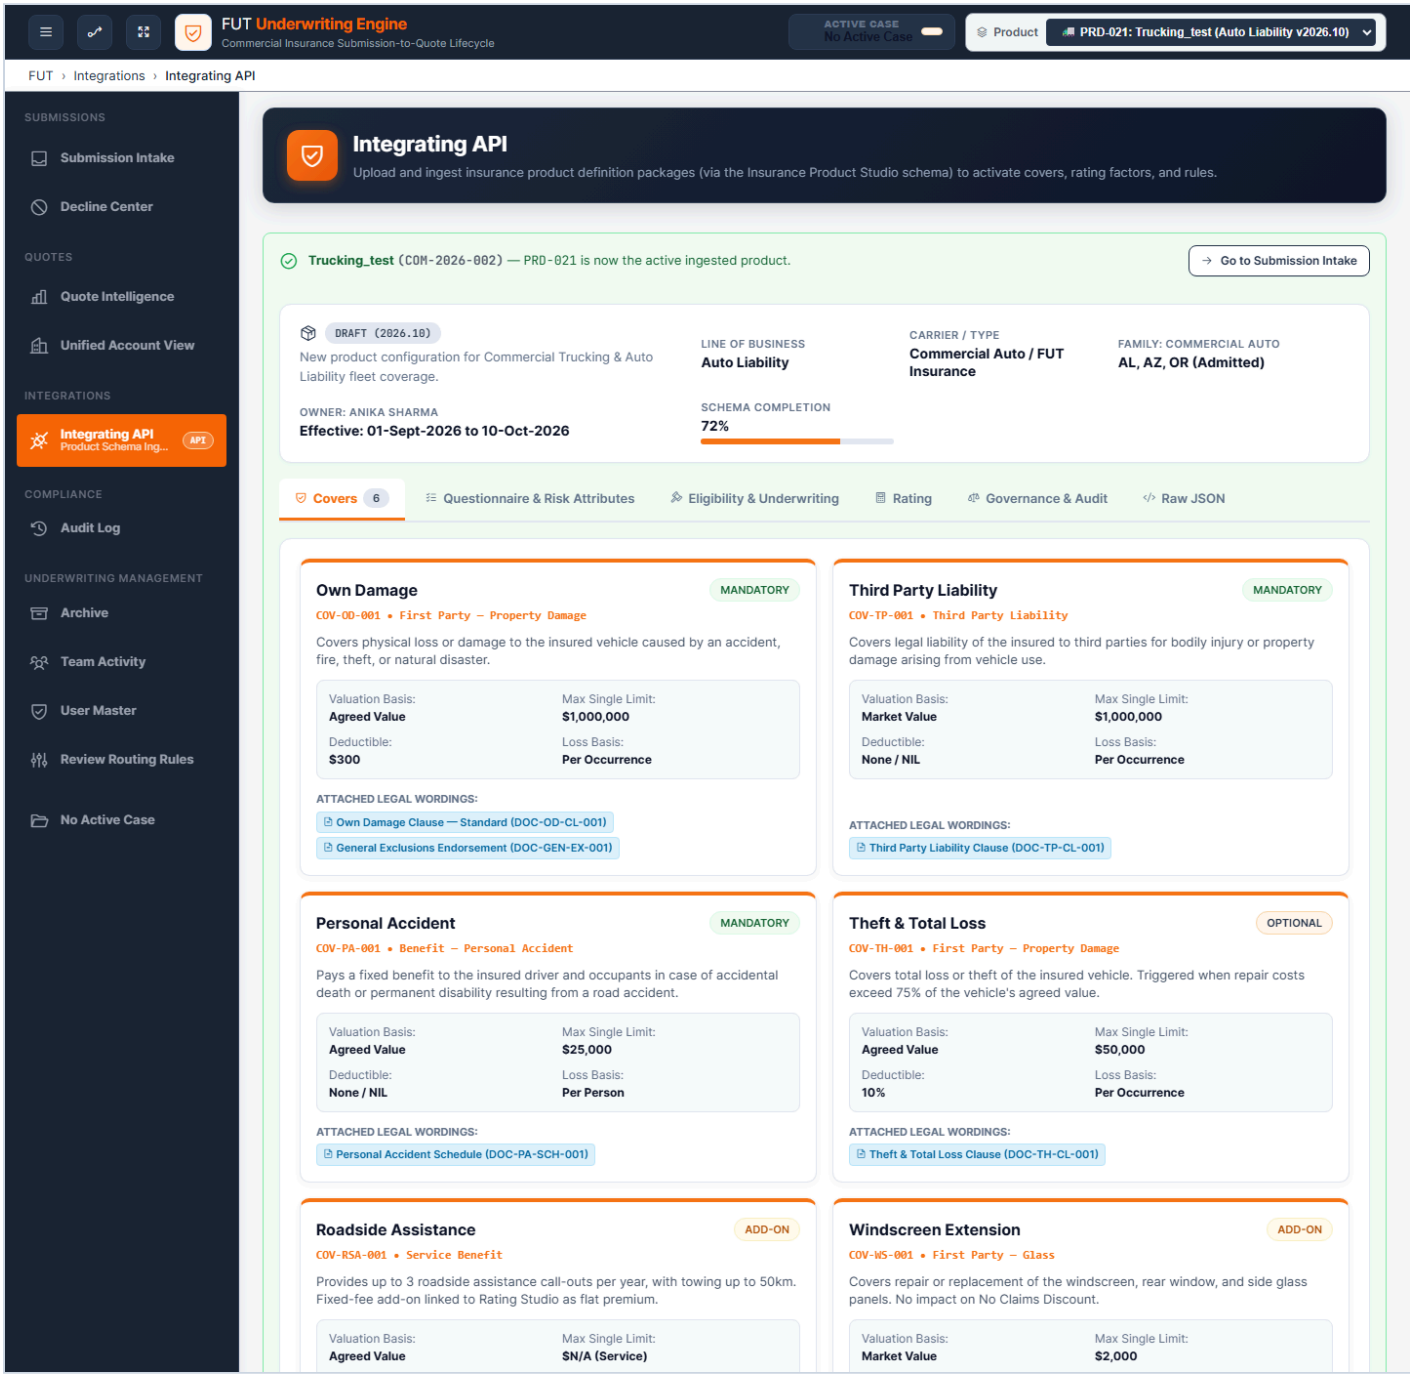

8. INTEGRATING API (PRODUCT SET-UP)

Integrating API: Covers

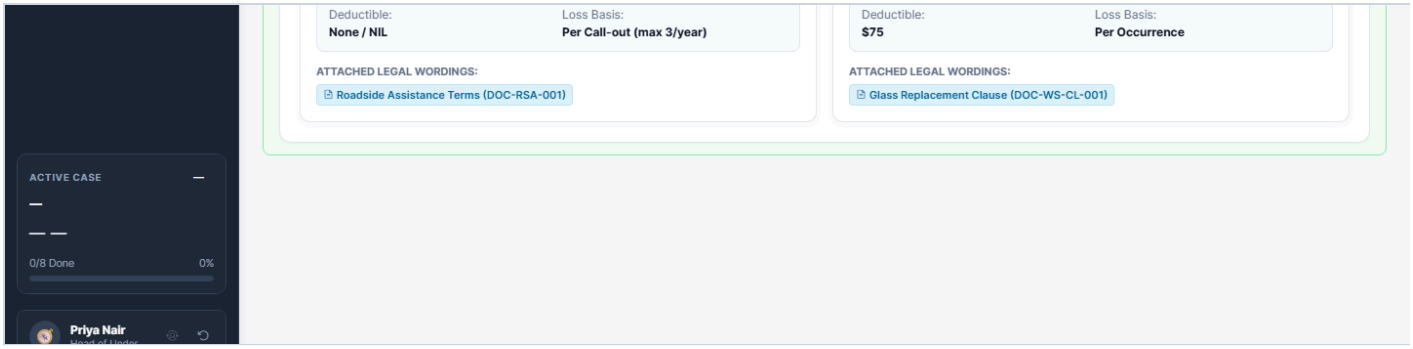

> Integrating API after a product (PRD-021, "Trucking_test") is loaded; it also becomes the active product in the header's Product list. The header card shows its status (draft 2026.10), line (Auto Liability), carrier, family (Commercial Auto), states (AL, AZ, OR, admitted), owner, effective dates and schema completion (72%). Tab 1, Covers: one card per coverage, marked Mandatory, Optional or Add-on, with its code, valuation basis, limit, deductible, loss basis and the legal wordings attached.

- Own Damage, Third Party Liability and Personal Accident are mandatory; Theft & Total Loss, Roadside Assistance and Windscreen Extension are optional or add-ons.

8. INTEGRATING API (PRODUCT SET-UP)

Integrating API: Questionnaire & Risk Attributes

> Tab 2: Questionnaire & Risk Attributes. The questions the product asks (grouped, for example Vehicle Details, each with an id and a type such as entity, number, currency or boolean) and the risk attributes it rates on (business type, fleet size, vehicle types, radius of operation).

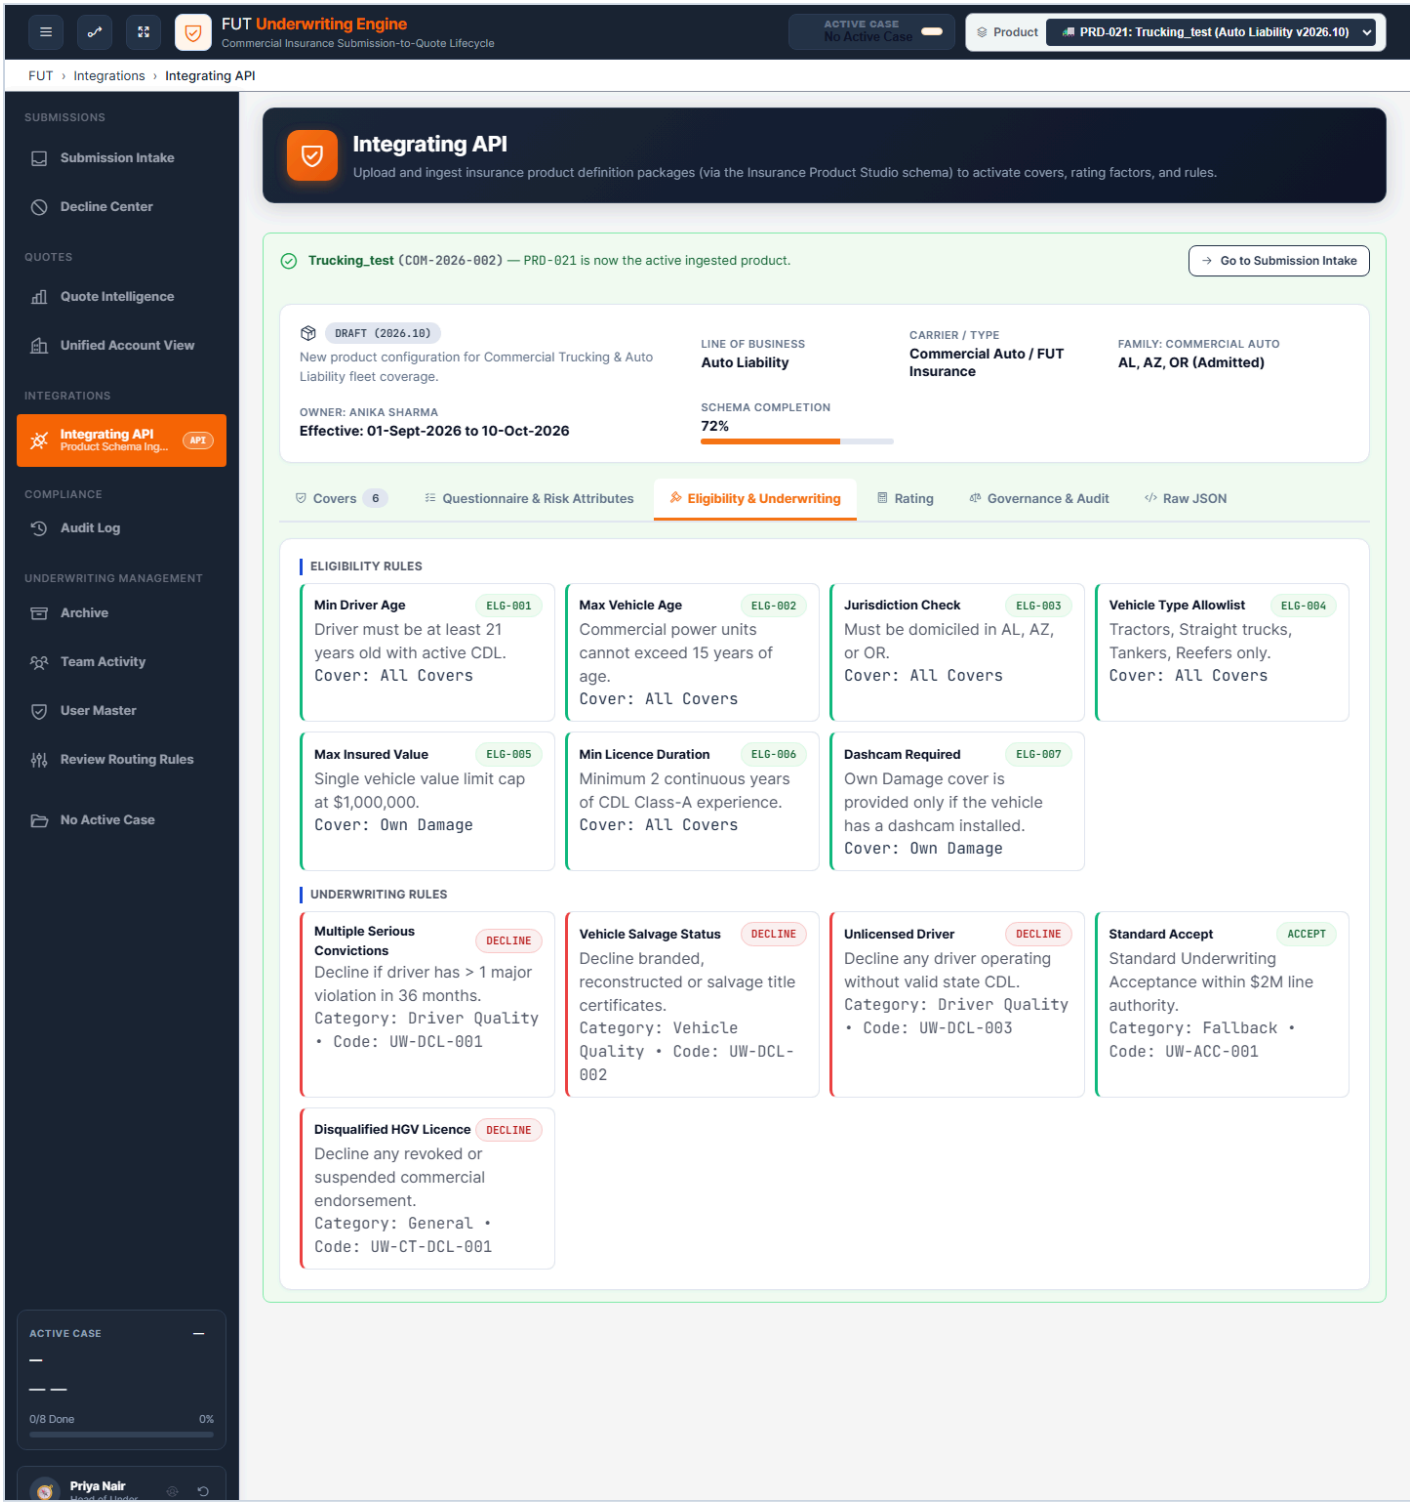

8. INTEGRATING API (PRODUCT SET-UP)

Integrating API: Eligibility & Underwriting

> Tab 3: Eligibility & Underwriting. Eligibility rules (minimum driver age 21, maximum vehicle age 15 years, jurisdiction AL/AZ/OR, vehicle-type allowlist, maximum insured value $1,000,000, minimum licence duration, and "Dashcam required" for Own Damage) and underwriting rules marked Decline or Accept (multiple serious convictions, salvage title, unlicensed driver, disqualified HGV licence; standard acceptance within the $2M line authority).

- These rules feed the appetite knockouts and quote conditions used on a case. For example, "Dashcam required" is what offers a Quote Condition when a unit has no dashcam.

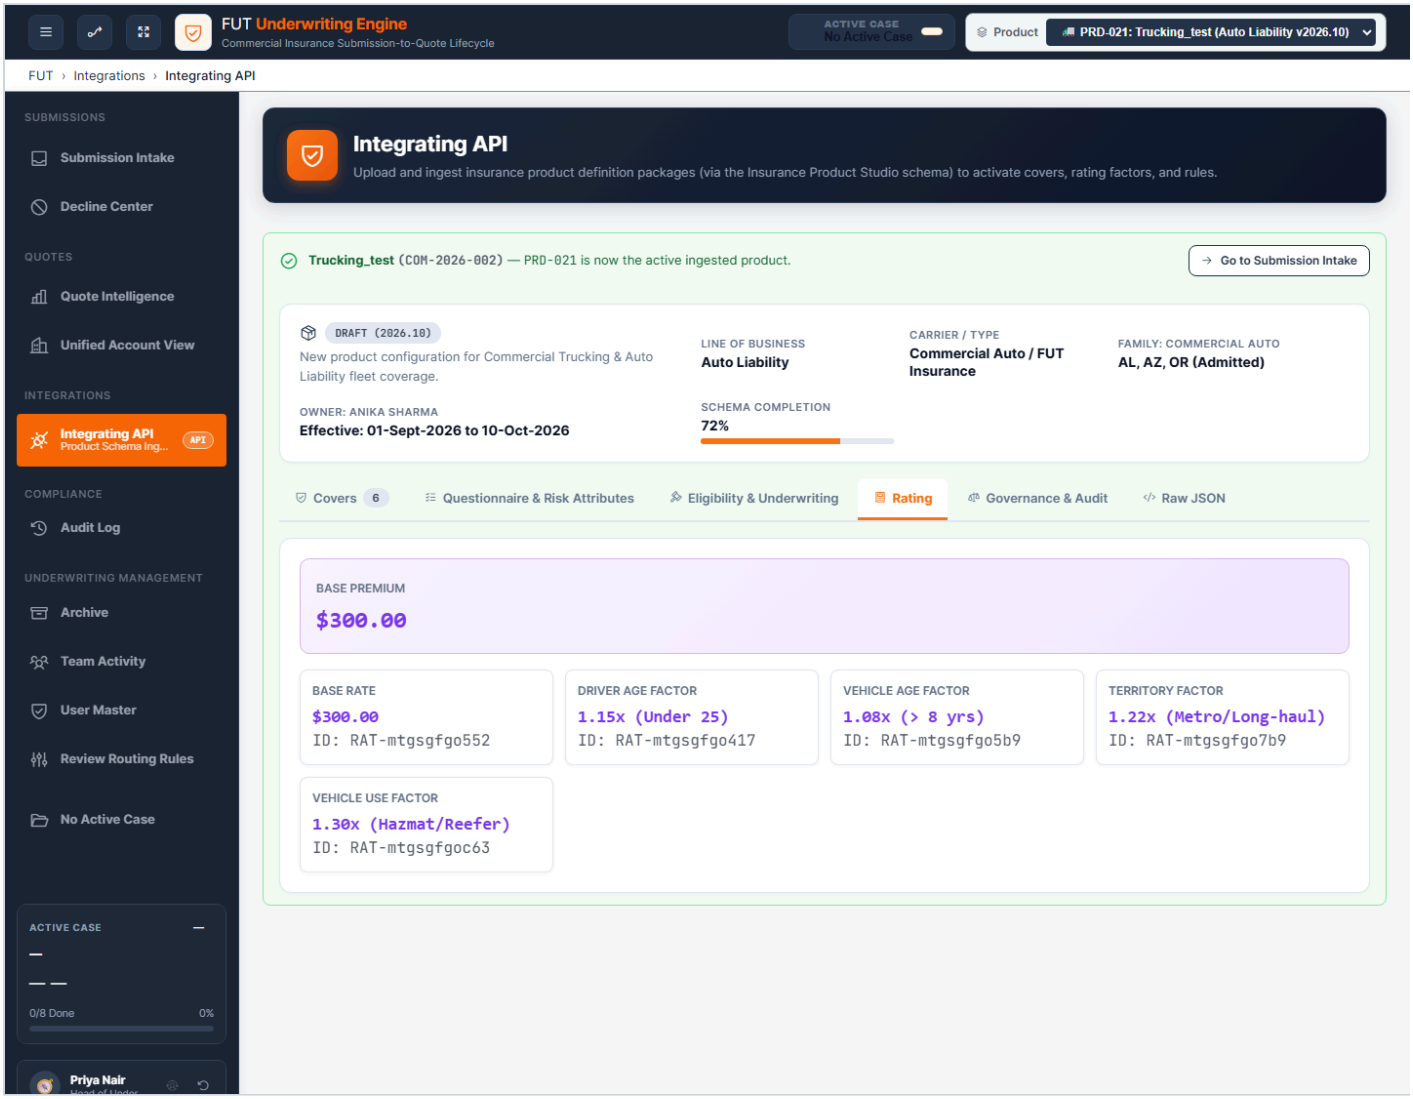

8. INTEGRATING API (PRODUCT SET-UP)

Integrating API: Rating

> Tab 4: Rating. The product's base premium ($300) and rating factors, each with an id: driver age (1.15x under 25), vehicle age (1.08x over 8 years), territory (1.22x metro / long-haul) and vehicle use (1.30x hazmat / reefer).

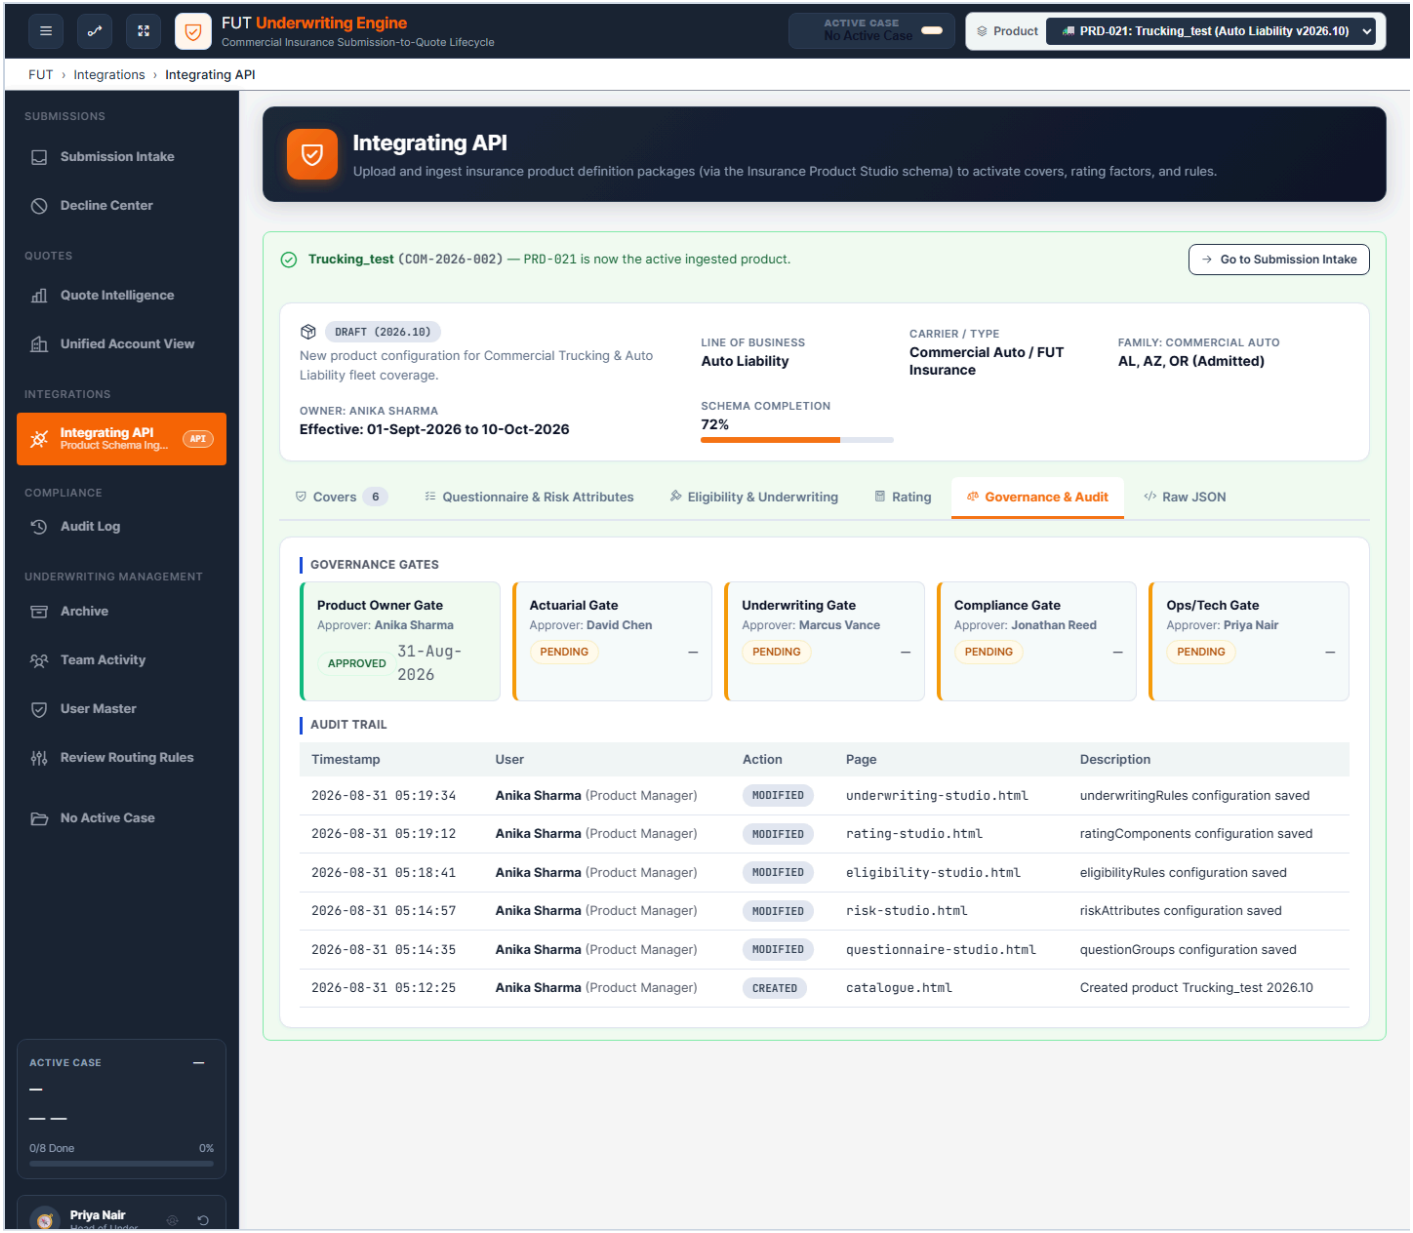

- The prototype does not calculate the premium itself; it imports the rating engine's result (Step 11).

8. INTEGRATING API (PRODUCT SET-UP)

Integrating API: Governance & Audit

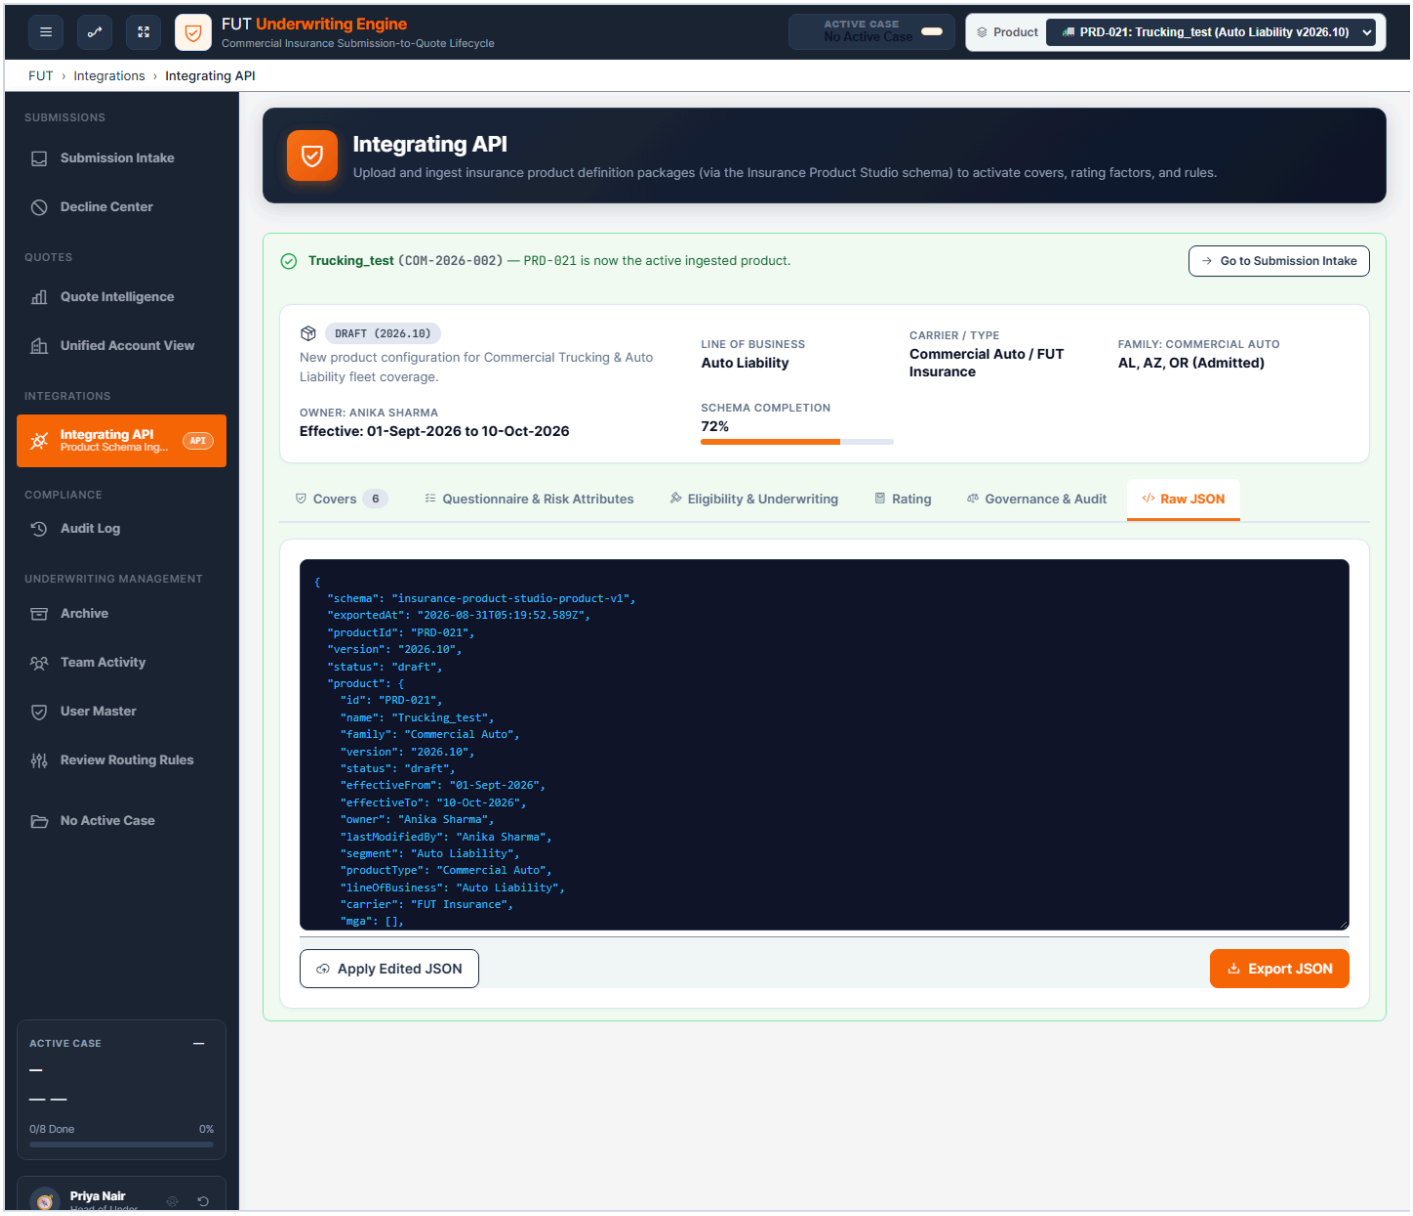

> Tab 5: Governance & Audit. Five approval gates for the product (Product Owner, Actuarial, Underwriting, Compliance, Ops/Tech), each with its named approver and a status; only the first is approved here. Below it is the audit trail of changes made to the product definition.

8. INTEGRATING API (PRODUCT SET-UP)

Integrating API: Raw JSON

> Tab 6: Raw JSON. The full product definition as editable JSON. Apply Edited JSON loads changes back into the product; Export JSON downloads it.

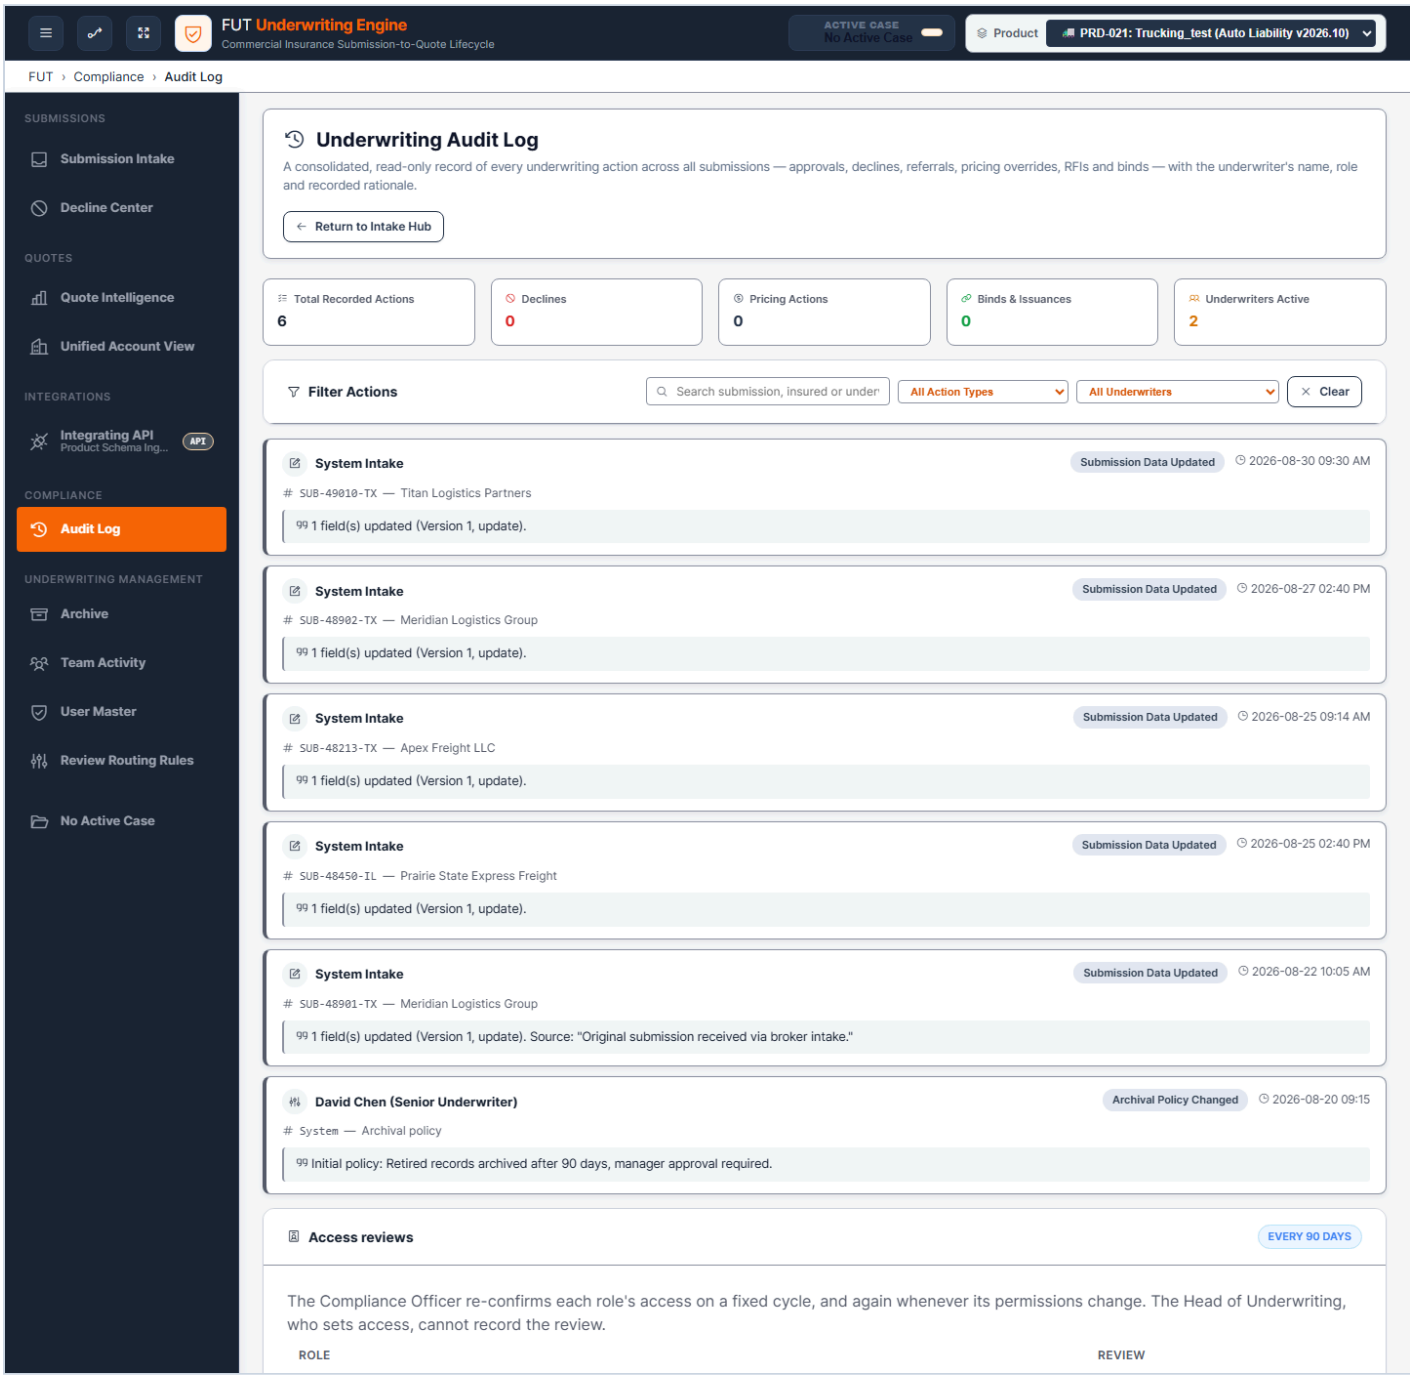

9. COMPLIANCE AND MANAGEMENT PAGES

Audit Log

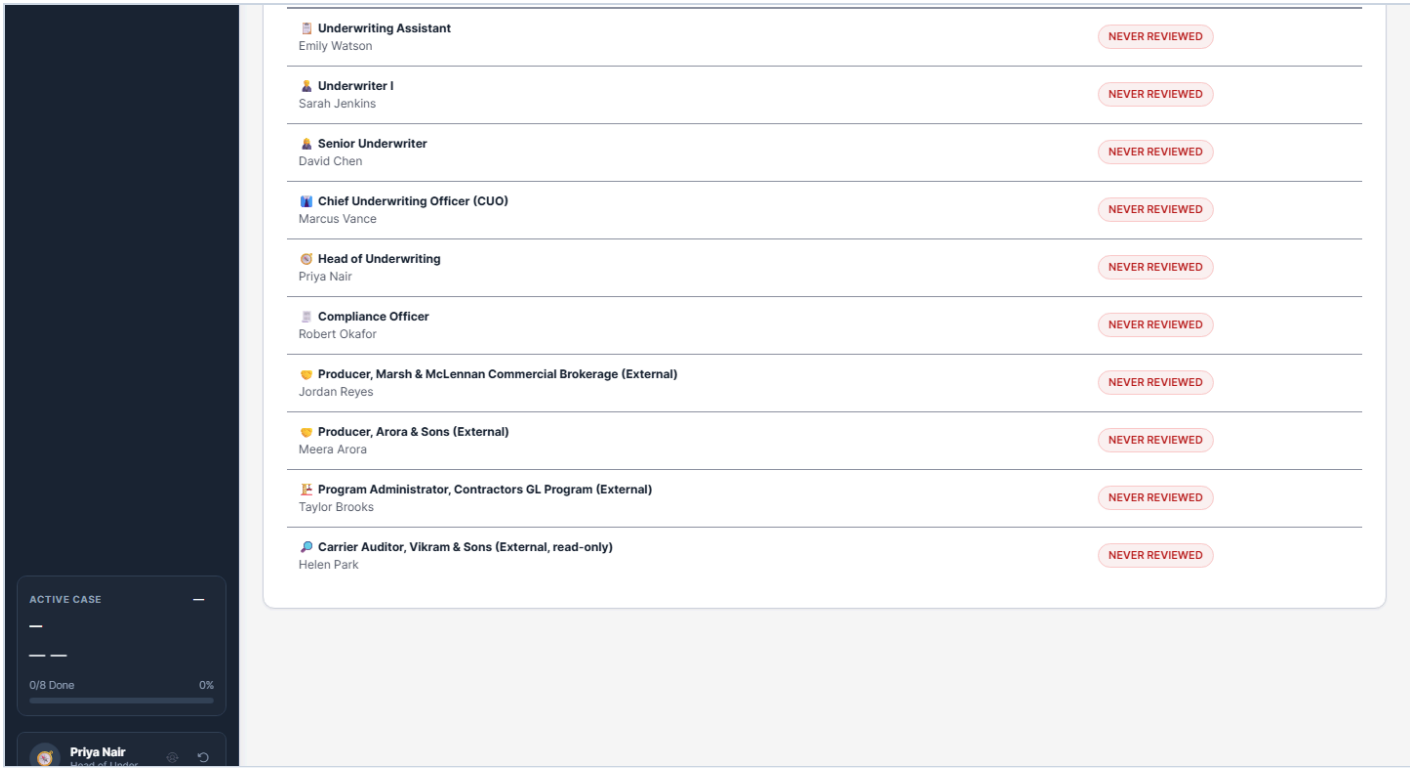

> Audit Log (Compliance menu). A read-only, consolidated record of every underwriting action across all submissions (approvals, declines, referrals, pricing overrides, RFIs, binds) with who did it, their role and the recorded reason. Tiles count total actions, declines, pricing actions, binds and issuances, and active underwriters; filters narrow by text, action type and underwriter. At the bottom an Access reviews panel tracks the periodic review of who has access to what (every 90 days).

- Visible only to roles with audit-log permission: Compliance, CUO, Head of Underwriting and similar.

9. COMPLIANCE AND MANAGEMENT PAGES

Archive & Retention

> Archive & Retention (Head of Underwriting only). Sets the archival policy (here: records that reach "Retired" are archived after 90 days, with manager approval required) and lists three groups: records eligible for archival now (with an Approve & Archive button), records approaching eligibility with the days remaining, and records already archived. Archived records are never deleted and stay available for audit.

- Every policy change and archiving action is written to the Audit Log.

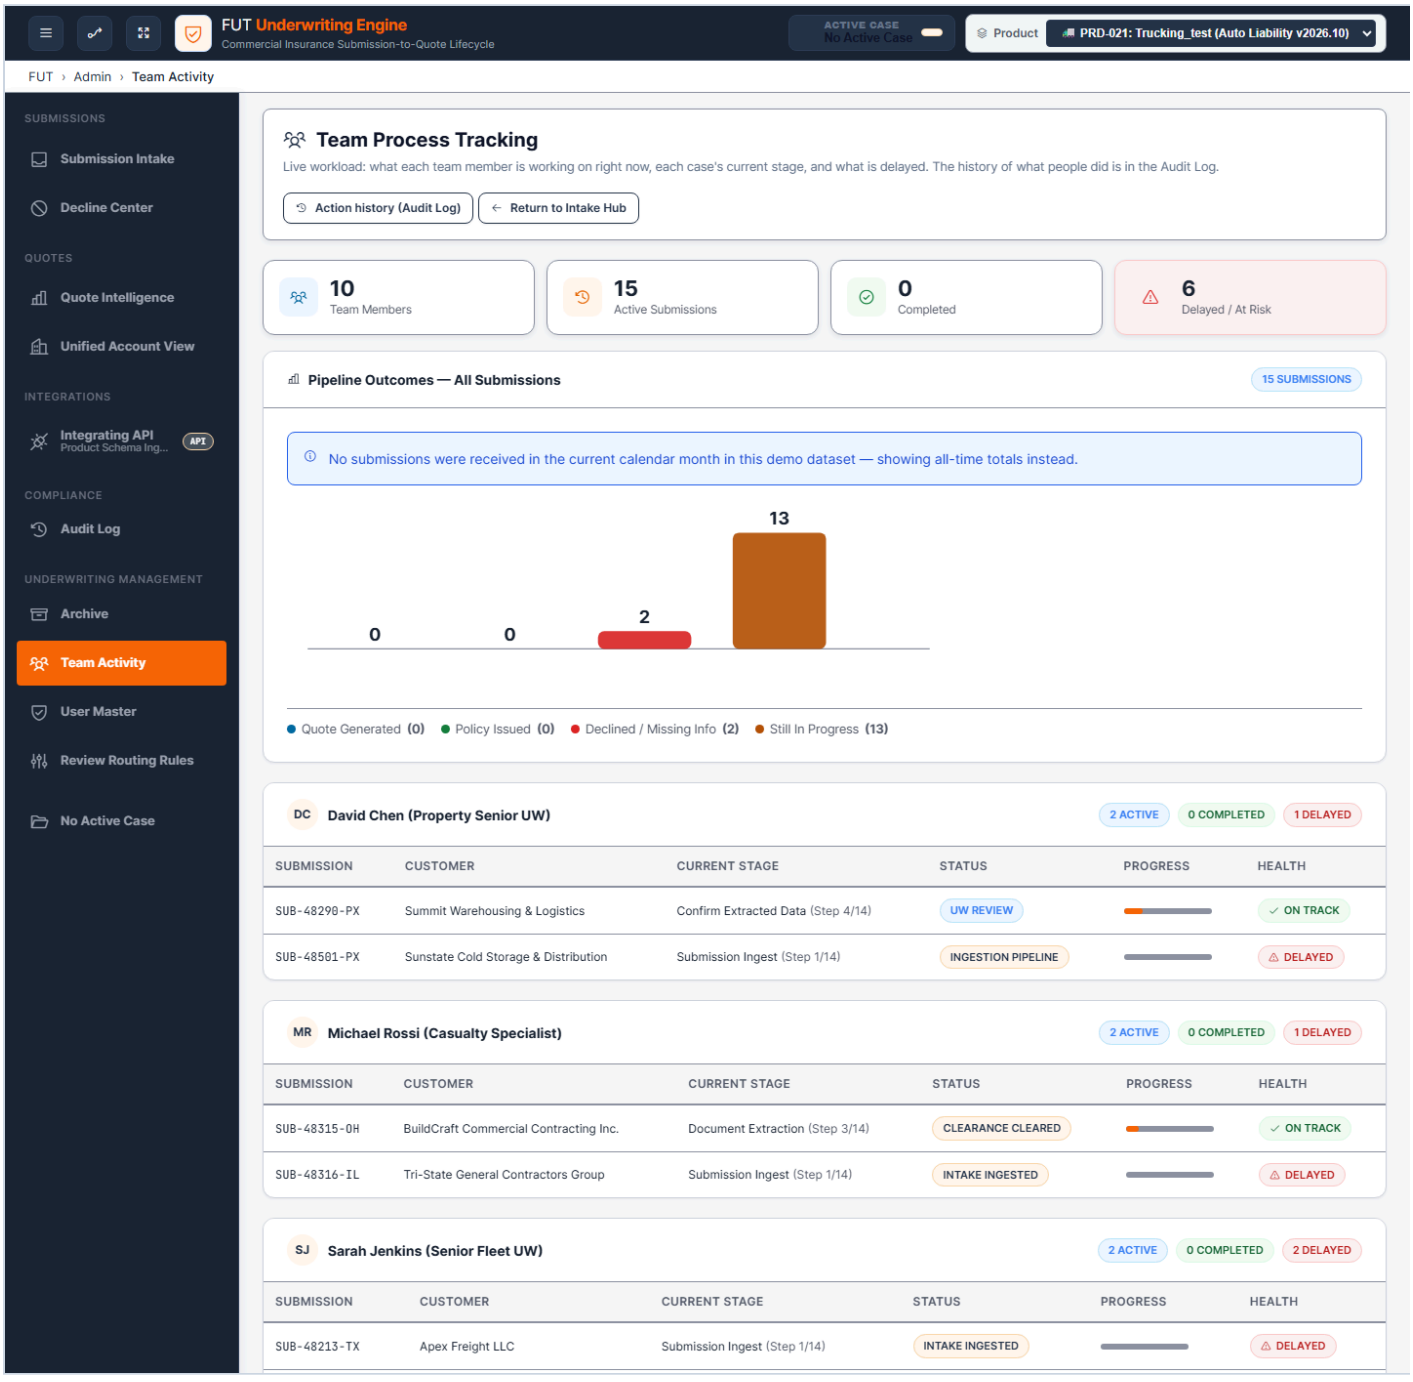

9. COMPLIANCE AND MANAGEMENT PAGES

Team Activity

> Team Activity (Head of Underwriting only): live workload. Tiles show team members, active submissions, completed and delayed / at risk. A chart shows pipeline outcomes (quote generated, policy issued, declined / missing info, still in progress), and a table per team member lists their cases with the current step (for example "Underwriting Workbench (Step 4/11)"), status, progress bar and health (On track or Delayed).

- The note on the page says no cases arrived in the current month, so all-time totals are shown.

Part 1 of 2, continued on the next page

Team Activity (part 2 of 2)

9. COMPLIANCE AND MANAGEMENT PAGES

User Master

> User Master (Head of Underwriting only): the team roster. Each person's role, authority limit, number of active submissions, jurisdiction (states and lines of business) and a description of what the role does. Buttons on each row edit the person's authority and permissions; Add User adds someone new.

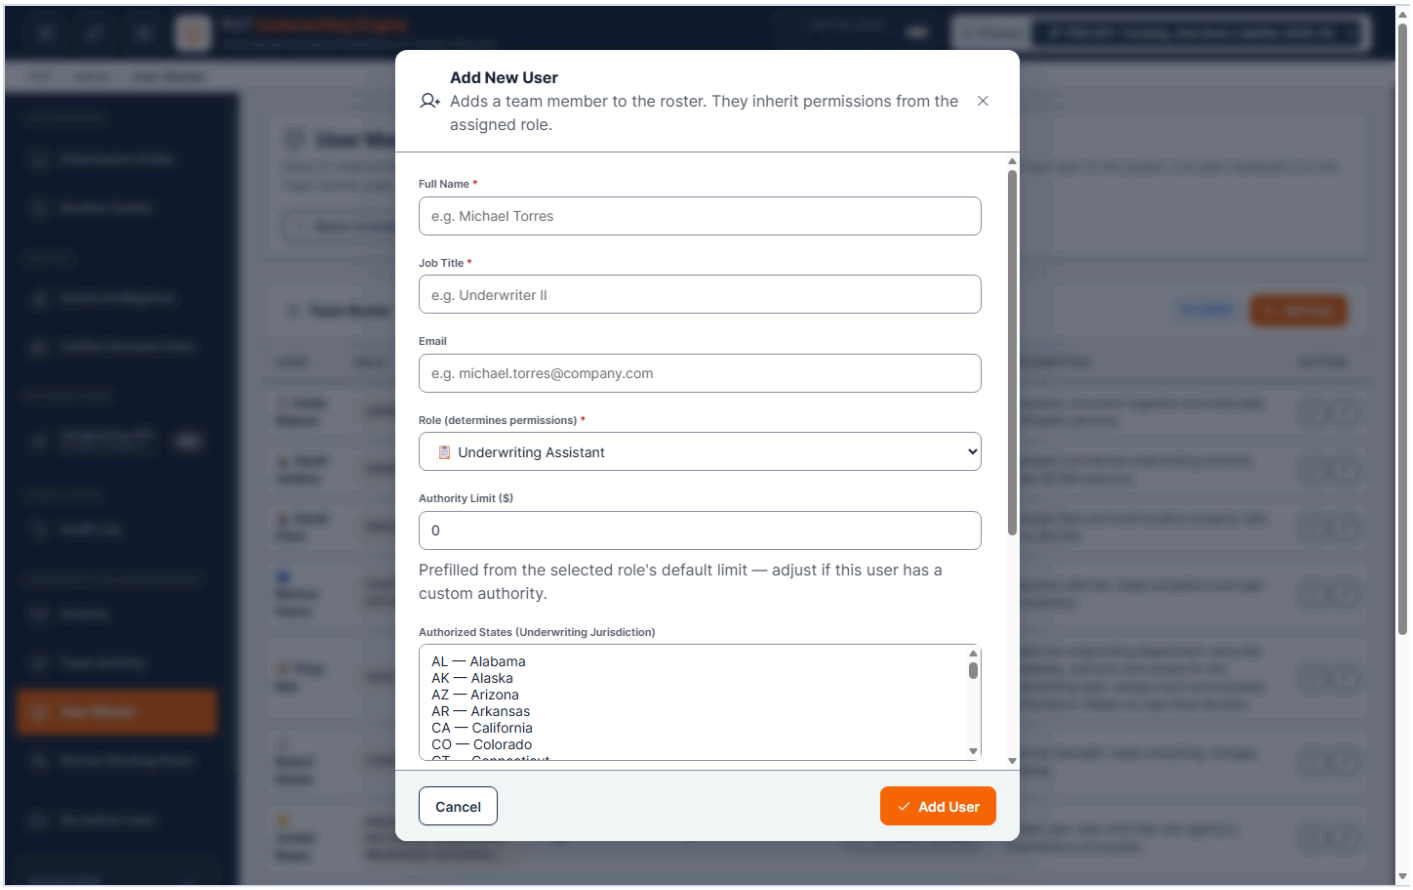

- Test-only external users (producers, a program administrator, a carrier auditor) appear in this capture because the sample data includes them; the shipped app lists the six internal users only.

9. COMPLIANCE AND MANAGEMENT PAGES

Add New User

> "Add New User" pop-up: full name, job title, email, role (which decides permissions), authority limit (pre-filled from the role's default and adjustable), and the states and lines of business the person is authorised to underwrite.

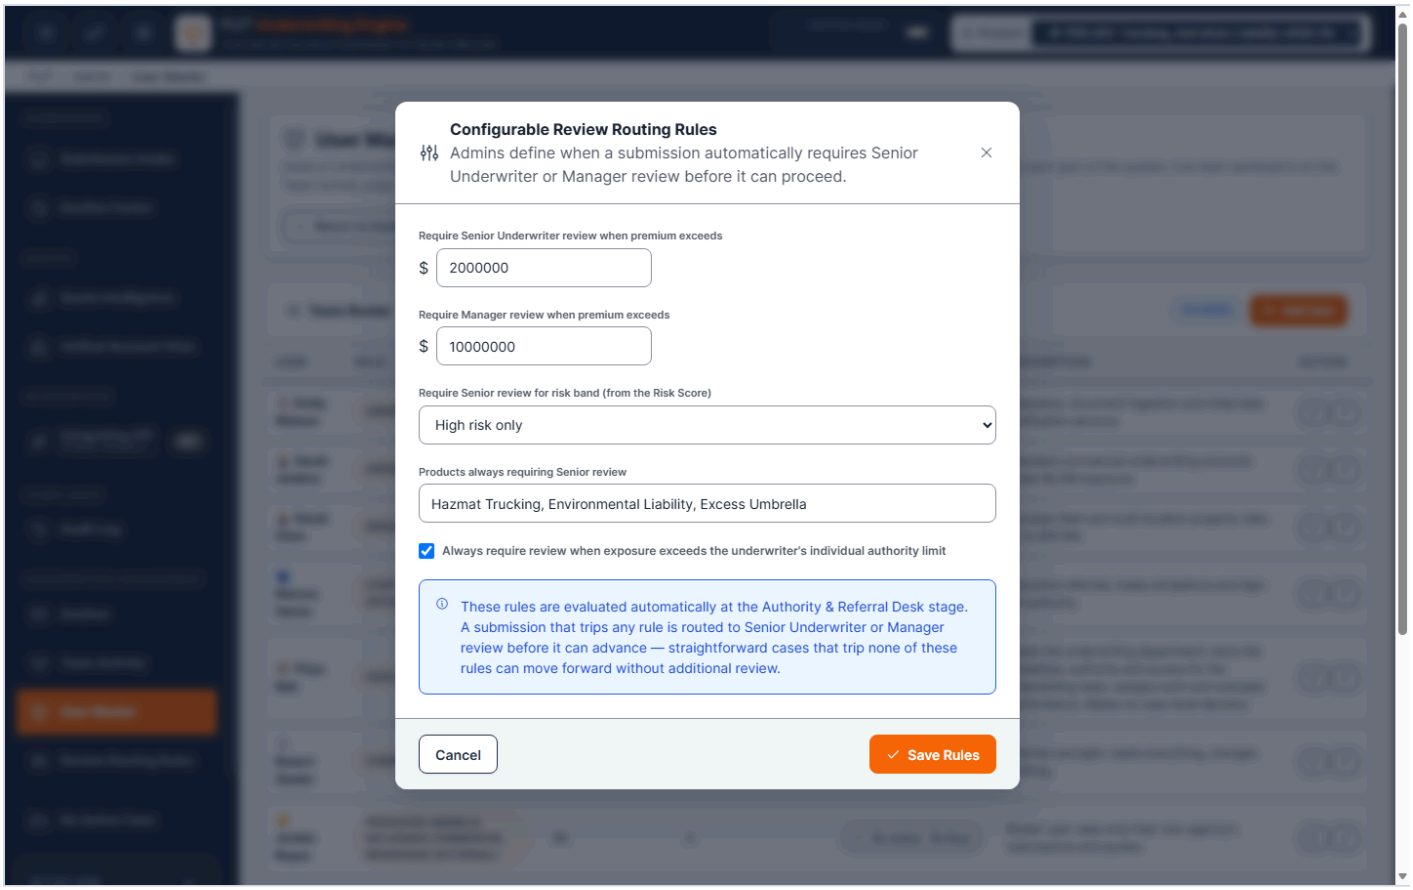

9. COMPLIANCE AND MANAGEMENT PAGES

Review Routing Rules

> "Configurable Review Routing Rules" pop-up (Head of Underwriting). Sets when a case must be reviewed by someone more senior: Senior review when premium exceeds $2,000,000; Manager review when it exceeds $10,000,000; a risk band from the risk score; a list of products that always need Senior review; and a tick box to always review when exposure exceeds the underwriter's own authority.

- These rules are evaluated automatically at the Authority & Referral Desk (Step 6). A case that trips any rule is routed to review before it can go on.

About the sample data and how this was captured

- The five trucking cases, the extra test users on User Master, the watchlist and the producer registry come from the project's test fixtures. The shipped app has none of them. The email case in Steps 1 to 4 (Delta Haulers LLC) and the referral case (Apex Freight Lines) were created by the capture script.
- The producer check reads the registry that is loaded for the session. With none loaded, a case is held at Step 2 and the check says the producer was not found; in these screenshots the fictional test registry is loaded.
- Some entries (the surplus lines tax confirmation, the search exemption, the disclosure acknowledgment, the customer acceptance and the signature) were filled in by the capture script so that the walk could continue. They are examples, not real records.
- No registry (FMCSA, NHTSA, DMV), OCR service, mail server, e-signature service or policy administration system is connected. The registry checks say so; the policy number is generated locally; replies to the broker are recorded on the case and not sent.
- Screens that depend on data that did not exist yet, such as Quote Intelligence before any quote, are shown empty on purpose. The same pages after a bound case are shown in sections 6 and 9.
- Screens were captured at 1440 pixels wide. Tall pages are split into consecutive parts.
